Ladies' and Children's Garden Tools.

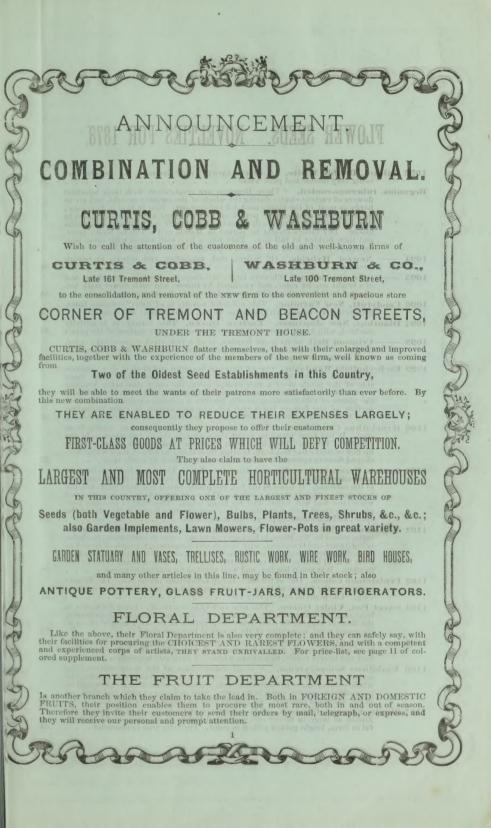

Sent by mail, postpaid.

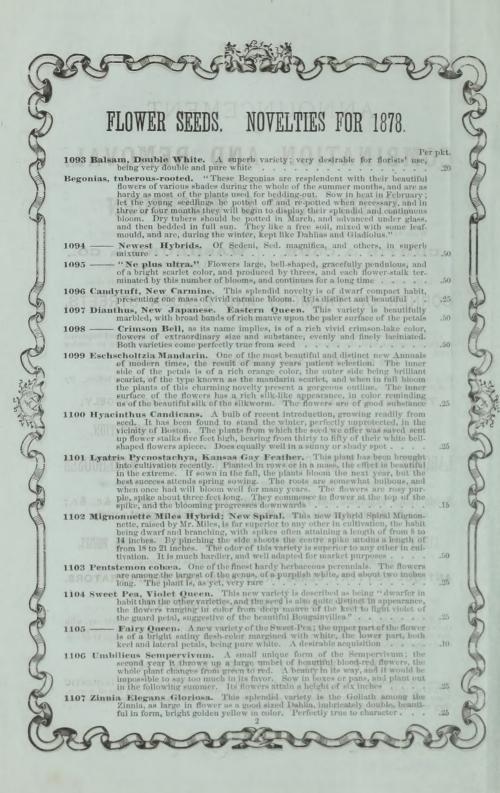

ADIES' AND CHILDREN'S GARDEN TOOLS, useful, handy, and small. Are liked very much by all who use them. Put up in neat boxes, 11 inches long by 3 wide.

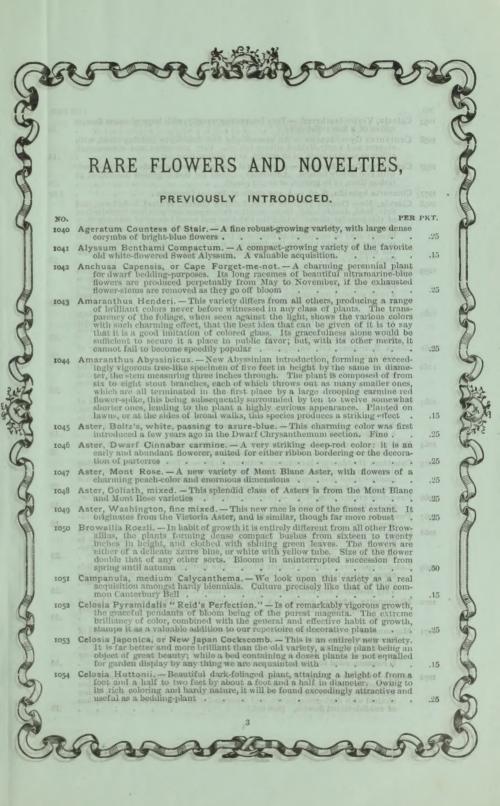

No. 1, extra polish, \$1.50.

No. 2, painted and polished, \$1.25.

WASHBURN & CO., Boston, Mass.

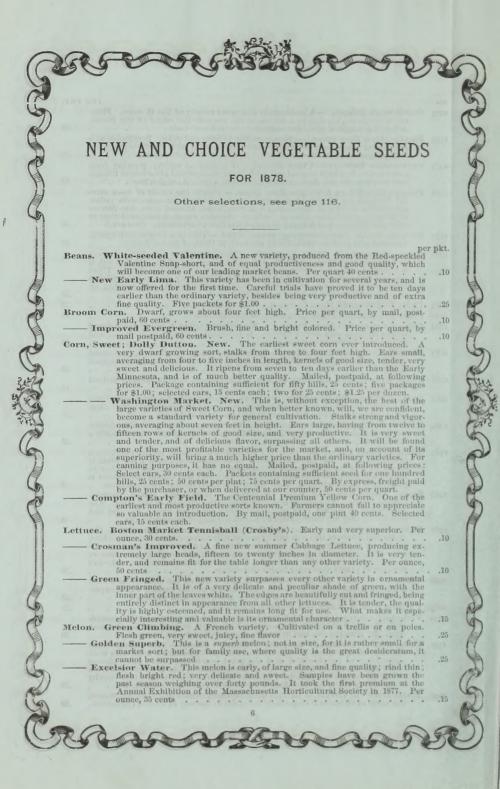

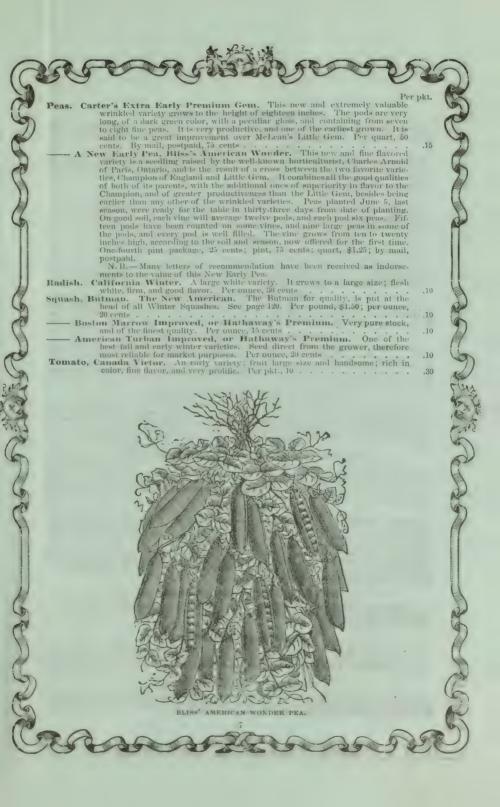

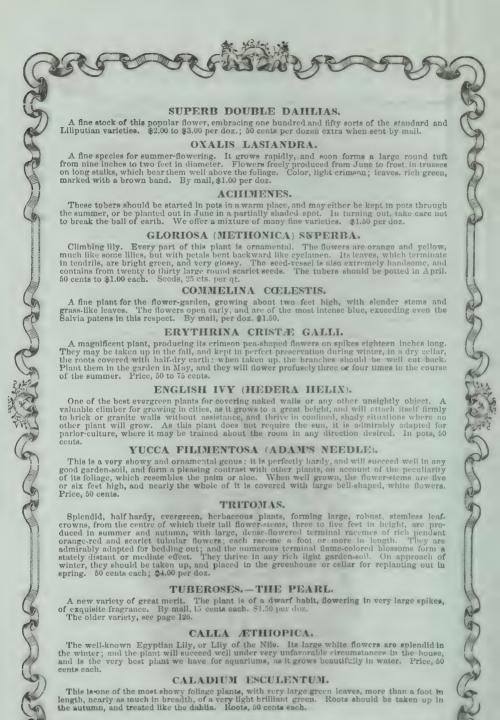

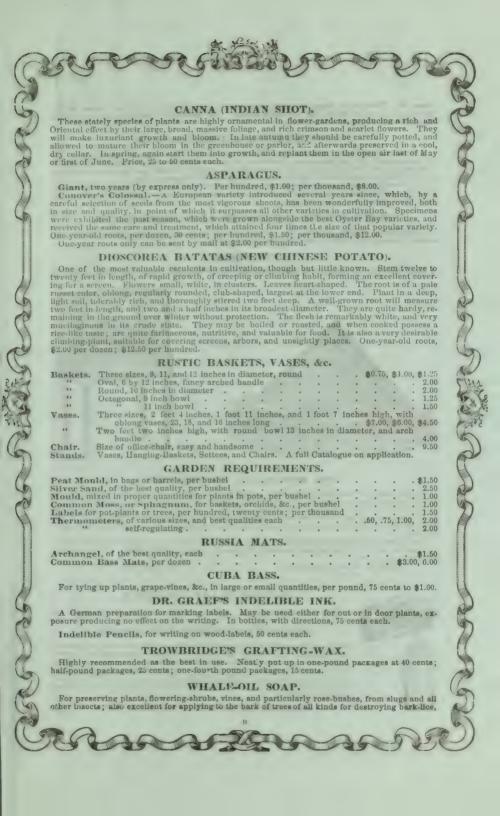

NO.		
1055	Celosia, Violet-feathered Very interesting novelty, with large plumose flower-	R PKT.
1056	spikes of a fine violet color Centaurea Gymnocarpa. — An exceedingly fine decorative bedding-plant, with elegant and finely-divided silvery foliage. Very attractive and ornamental,	.50
1057	either as single plants, or in groups, or in ribbon-planting Centaurea Candidissima!—A beautiful and picturesque hardy bedding-plant, with fine silvery foliage. Admirably adapted for flower-garden decoration in ribbon-lines, or in groups, or single plants	.15
10572	Cineraria hybrida, fl. pl A new strain of Double Cineraria	1.00
1058	of this popular nower, without the field these and hover beauty of coloring they	
	possess stamp them as a welcome addition to our hardy summer flowers. The blooms may be compared to the finest Double Balsam in substance; and this peculiar character renders the flowers of a much more durable character than	
	the ordinary Clarkias, and, as cut blooms, they will prove a valuable acquisition. Each color.	.25
1059	Clypeola Cyclodontea. — A charming small Cruciferæ (Crosswort), of a fine green color, with small yellow flowers, which are hardly apparent, but are soon succeeded by hundreds of flat, purse-like pods, prettily fringed, and producing a most singular appearance. It is well adapted for specimens in borders and	1301
тобо	convolvulus Minor (New Crimson Violet).—The flowers are very striking. They have a bright yellow eye, encircled with a band of snowy white, broadly margined with rich crimson violet, varying in some blooms from bright violet	.25
1061	to rich, yelvety, purple crimson Cobea Scandens, fol. variegatis. — Pretty silver white variegated variety of that favorite variety	.25
1062	Cobea Scandens, fl. alba. — A rapid-growing elimbing-plant, with large white bell-shaped flowers. Finely adapted for bedding out in summer. Seed should be sown early to secure well-established plants by the time the season arrives for planting out	.50
1063	Delphinium Imperiale, fl. pl., "Emperor Larkspur."—This new race is of symmetrical bushy habit. The plants branch out four inches from the ground, forming fine, compact, well-proportioned specimens of a foot and a half in diameter by three feet and a half in circumference, the uniform height being	Stat.
1064	a foot and a half. Delphinium nudicaule. — Profuse-blooming variety, perfectly hardy, in fact, a splendid acquisition. Flowers a dazzling scarlet.	.15
1065	Dianthus Heddewigi laciniatus striatus, fl. pl. — A fine, new, largo-flowering double variety of the favorite Dianthus laciniatus. The white blossoms, elegantly striped and streaked with different shades, which vary from a delicate	TIOI
1066	rose to the deepest red, produce a most charming combination of hues Feverfew crecta alba, fl. pl. — In every respect like Double or White Feverfew, except in habit, which is erect	,25
1067	Feversew, Golden Pyrethrum Bright golden foliage. One of the best bed-	
1068	ding-plants Godetia Lady Albemarle. — Is an extremely beautiful variety, bearing flowers quite four inches in diameter, and of a glowing crimson color. The plant is compact in habit, and the flowers produced in the most profuse manner. Per-	,10
хобо	fectly hardy. (See cut.) Lobelia speciosa, Carter's Cobalt Blue. — The distinguishing character of this plant is, that it has no white in the eye of the blossom, nor any purple on the calyx; so that the brilliant blue has the entire possession of the field of color.	.25
1070	Very effective, and more compact in habit than L. speciesa Mignonette odorata amcliorata folus variegatis.—This variegated-leaved variety reproduces twenty per cent true to character, which are curiously	.25
	pretty	.50
1071	Mignonette Pyramidal Bouquet. — This variety forms a dense short pyramid of free growth, the numerous branches being terminated by large spikes of intense red flowers, as many as three hundred being produced, one full grown specimen. The foliage is luxuriant, and of a dark green. This variety	(No.)
YOU	is recommended for pot-culture and for the open border. (See cut.)	.10
1072	distinct in character. It forms a dense semi-globular bush of about ten inches high and eighteen inches across; the robust and vigorous branches being clothed with dark-green leaves, and decorated with innumerable close spikes	
	of reddish-tinted flowers. (See cut.)	.10

three to five feet high in good soil, with highly ornamental glaucescent follage, and very conspicuous flowers, each marked by a central reddish line. 25. 1676 Petunia Grandiflora fimbriata flore pleno. — This is the result of most careful feet feet and for feet alarge-flowering single-fringed Petunians with pollen taken from blooms of the newest and best double fringed sorts, the flowers rivalling in doubleness those of the Double Garden Poppies, and emulating in color the richness and delicacy of tint of the finest Carnations. (See cut.) 1677 Petunia, double, large-flowering, green-edged. — This is a very superb strain. The seed will produce about thirty per cent, at least, of double flowers. 1678 Phlox Drummondii Nana Compacta. — This plant is a beautiful compact dwarf bush, closely covered with flowers. On account of its dwarf habit, it is equally suitable for border or bedding purposes as for pol culture. The area was two varieties of this security of the product of the control of the flowers of the security of the product of the control of the flowers of the security of the control of the flowers of the security of the flowers of the security of the flowers of the flowers, which are similar in form to those of the perunial sorts. Rendered very striking by a large entre, and fine dark violet eye	C3		
Oxalia rosea delicata.—A particularly charming variety of the O. rosez. Flowers roses almon turning to a darker shade towards the edges of the petals. Admirably adapted either for edgings or small flower-beds. 25. 26. 27. Pareley, New Fern-leaved.—Most sequisition in form and celor. Invaluable as a garnabling plant, and uthinably suited for mixing with dyant ornamental foliaged plants this flower-garden, and also for table decoration	5	a comment of	
Oxalia rosea delicata. — A particularly charming variety of the O. rosea. Flowers resys-salmon, turning to a darker shade towards the edges of the petals. Admirably adapted either for edgings or small flower-beds. 25. 1674 Pareley, New Fero-leaved. — Most exquisite in form and color. Invaluable as a granushing plant, and ridinirably suited for mixing with dwarf ornamental foldinged plants in the flower-squeen, and also for table deceration. —	NO.	PER	PKT.
ers resy-salmon, turning to a darker shade towards the edges of the petals. Admirably adapted either for edgings or small flower-beds. 25074 Pareley, New Fern-leaved.— Most exquisite in form and color. Invaluable as a gambling plant, and minimably suited for mixing with diwird ornamental glangshing plants and thirably suited for mixing with diwird ornamental foliaged plants in the flower-garden, and also for table decention. 250 Pentstemon Palmeri.— A very distinct and handsome variety, growing from three to five feet high in good soil, with highly ornamental glancescent foliage, and very conspicuous flowers, each market by a central redulab line. 251 Petunia Grandiflora fimbriata flore pleno.— This is the result of most careful fecundation of the large-flowering single-tringed Fetunias with pollen taken from blooms of the newest and best double tringed sorts, the flowers rivalling in doubleness those of the Double Garden Popies, and emulating hold the redunestion of the large-flowering green-edged.— This is a very superb strain. 251 Petunia, double, large-flowering, green-edged.— This is a very superb strain. 252 This seed will produce about thirty per cent, at least, of double flowers. 253 Phlox Drummondi Nana Compacta.—This plant is a beautiful compact dwarf bush, closely covered with flowers. On account of its dwarf hibit, it is equally suitable for border or bedding purposes as for pot cultime. There are two varieties of this new type, one of brilliant fleey red, and the others are two varieties of this new type, one of brilliant fleey red, and the others are two varieties of this new type, one of brilliant fleey red, and the others are two varieties of this new type, one of brilliant fleey red, and the others are two varieties of this new type, one of brilliant fleey red, and the others are two varieties of this new type, one of brilliant fleey red, and the others, and the others are two varieties of this new type, one of brilliant fleey red, and the other transported by the flee of the proving a co		Oxalis rosea delicata A particularly charming variety of the O. rosea. moss, &c. Two-pound boxes, 86 cents; five-pound boxes, 75 cents; ten-pound boxes, \$1.25; twenty-pound boxes, \$2.00, with directions for use. Tin Syringes for applying the soap, \$1.25. Brass Syringes, \$2.50 and upwards.

SAPO TABACUM, or TOBACCO-SOAP.

A universal remedy for the pests of gardens, nurseries, &c. The most convenient, potent, and cheapest specific for the destruction of aphides, red spiders, thrip, rose-bugs, slugs, and all insects infesting plants; also an efficient specific for the destruction of ticks and parasitic vermin on sheep and other domesticated animals, obnoxious insects in houses, stables, &c.

The Massachusetts Horticultural Society awarded a silver medal at the patentee as a testimonial

to the importance and value of his discovery. Sold in one-pound bars, at 50 cents per pound.

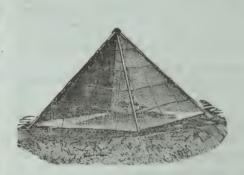

Wholesale price given on application.

DRIED NATURAL FLOWERS AND IMMORTELLES,

or Everlasting, Mosses, Grasses, &c. Very useful for making wrestles, crosses, winter bouquets, Christmas decorations, &c. Prices on application.

FERNERIES.

A large variety of all styles, both Terra Cotta and Black Walnut. Prices from \$3.00 to \$25.00.

VINE AND PLANT PROTECTORS.

The great value of these simple and cheap articles for the protection of cucumber, squash, melon, and other young plants, from the ravages of bugs and all other kinds of insects, has been practically proved by eleven years' use. They not only afford a sure protection from insects, but also from injury by high winds, storms, and even light frosts; while they admit the light, sun, and air freely to the plants, thus promoting a healthy and vigorous growth, and accelerating their early maturity.

The square Protectors spread nineteen inches; the round ones are sixteen and eighteen inches in diameter; and, when not in use, both so fold up as to require but little room. With care they

will last many years.

Price for square Protectors round

\$1.50 per doz.

This neat and ingenious apparatus is the best thing ever invented for

DESTROYING INSECTS ON HOUSE-PLANTS,

by the application of solutions of Whale Oil, or Tobacco Soaps, in the form by the application of solutions of whate Oil, or foonees Soaps, in the form of a vapor, or exceedingly fine spring; effectually destroying all insects without the annoyance of drip or waste of material, as is unavoidable when applied with a syringe. This little instrument will be found valuable generally, and particularly for House-Plants, on account of the neatness and facility attending its use, and its effect in keeping plants in a vigorous and healthy condition.

Put up in neat boxes, price \$1.50; by mail, postpaid, \$1.65.

These very useful and ornamental articles are invaluable for training plants, shrubs, vines, &c., either when grown in pots, or in the open border. They are made of reeds, painted green; are very light; and retain their shape and form better, and are much cheaper, than those made of wire.

BOUQUETS AND CUT FLOWERS.

One of the evidences of refinement and culture is the increasing taste and demand for natural flowers for the decoration of churches, dinner and supper tables, weddings, funerals, &c. Flowers are acceptable and suitable for every occasion. We have made such arrangements, that our facilities are unsurpassed. Our connection with the leading growers in the vicinity of Boston, and the employment of first-class floral artists, enables us to offer dowers arranged in any floral device or decoration at reasonable prices at shortest notice. They can be packed so as to be carried safely for one or two days' journey by express, except during the heat of summer. The following are a few of the many designs supplied to order:—

BASKITS and PLATEAUX of elegant design. 500 at 20 00 For Furerals. Anchors, crowns, wreaths, crosses, of white flowers, each from 500 at 25 00 We should be pleased to give estimates for large decorations. Orders by telegraph, mail, or express, will receive prompt attention. A supply of Boston's famous Rosesbuds, Smilax, &c., constantly on hand. Correspondence with caterers and undertakers solicited.

SENIER'S ASTHMA REMEDY.

Price per Box, 50 cents; by Mail, 55 cents.

ASTHMATICS, why will you endure a miserable existence when you can obtain relief by using this Remedy!

The Proprietor of this remedy had been an Asthmatic for sixteen years, and during that period, up to the time of this happy discovery, seldom enjoyed a night's rest. In short, he had endured all those phases of torture which every Asthmatic too well understands. When the attack comes on, the inhalation of the remedy will overcome the PAROXYSM IN A FEW MINUTES. The ADVANTAGE of THIS REMEDY over Medicine taken into the stomach will at once be apparent, as, by its use, direct contact with the BRON-CHIAL TUBES and LUNGS is obtained, and the evil consequences of impairing the digestive organs are entirely avoided. In America and England there is a large and increasing demand for this remedy, and it only requires to be known to be appreciated.

Knowing of many cases of Asthma, where persons (some of whom are our intimate friends) have found relief by using the Remedy, we have been induced to offer it to our customers, believing it to be the most effectual Remedy known for that distressing com-

plaint.

(Catalogues, for Prices and Description, on Application.)

PEAR TREES. — Standard and Dwarf. The best known. Adapted to all seasons.

APPLE TREES. — Early and late. The best standard varieties.

CHERRY TREES. — Black Tartarian, and others of standard quality.

PLUM TREES. — The most desirable in cultivation.

PEACH TREES.—All the varieties of standard quality.

QUINCE TREES. — The most desirable for cultivation.

GRAPE VINES.— Native and foreign. The best known to cultivators.

CURRANT BUSHES.—Red and White. The best for general cultivation.

GOOSEBERRY BUSHES. — American and English varieties.

BLACKBERRY BUSHES.—Wilson's Early, Dorchester, and others.

RASPBERRY BUSHES.—The Clark (very hardy), and all other popular favorites.

STRAWBERRY PLANTS.

Prize Varieties. New: seedlings of John B. Moore, lately introduced. They are considered very superior. Grace, an early variety: Caroline, intermediate. Each per dozen by mail, postage paid, \$1.00. Triomphe de Gand, Wilson's Albany, President Wilder, Jucunda, and all other choice varieties, by the 100 or 1,000.

14

A large collection of new and choice Hybrid Perpetuals and June Roses, and choice Tea Varieties for Summer Bedding or Greenhouse Culture.

CLIMBING ROSES. THE MOST DESIRABLE IN CULTIVATION.

Hardy Perennial and Herbaceous Plants.

A large collection, embracing those most desirable for Ornamental Gardening.

BEDDING PLANTS.

This class of Plants, now so extensively used for summer decoration of Beds, Borders, and Ribbon Planting, embraces the most beautiful varieties of

Double and Single Flowered and Ornamental Foliage Geraniums, Fuchsias, Heliotropes, Verbenas, Lobelias, Coleus, Salvias, Carnations, Petunias,

And many others of great beauty, suitable for VASES, BASKETS, ROCKERIES, ETC., that can be furnished by the dozen or hundred, and sent safely by express or freight at reasonable prices.

This simple instrument gives universal satisfaction when used among small and tender plants. It removes the weeds with great rapidity, without injuring the plants or soiling the hands; if not the best, it is the only instrument ever offered for the purpose. Price, 25 cents; by mail, 40 cents.

RANDOLPH'S HAND SEED-SOWER.

For Sowing all kinds of Small Garden Seeds with accuracy and despatch.

It is easily operated by a lady or a child of ordinary intelligence, with a little practice. Highly recommended by some of our most experienced gardeners and furmers.

Fig. 1 shows a side view of the implement, with the manner of holding it in the hand, and position of the finger; A, hopper for containing the seeds to be sowed, inside of which is an agitator for discharging the seeds, connected with the lever D, to be kept in constant motion by the finger while in use; F, earth opener, by means of which a furrow is made for the seed; the removable sides H are perforated with holes of various sizes, adapted for the different varieties of seeds to be

sown; B, cover or lid; C, handle; D, finger lever; E, spiral spring to assist in the operation of the agitator.

SPECIAL DIRECTIONS for use will be sent with each Sower.

Sower.

Being made of metal, it cannot easily be broken, and its construction is so simple that it cannot readily get out of order.

Its cost is trifling compared with the advantages resulting from its use. The saving in time and seeds will undoubtedly repay the outlay in the planting of a single day. 81:25 cach. Sent by mail, postpatid, to any address in the United States, upon receipt of \$15.50. For a more complete description send for Circular. This Seed-Sower can also be furnished with an extended handle, to allow the operator to stand while using it; price, \$15.50. On account of its length, this pattern cannot be sent by mail.

The Portable Excelsion Pump and Fire Engine,

This compact, portable, and generally useful Engine can be used for every variety of purpose. All its working parts are of brass. It is fitted with discharge and suction hose for drawing water from a stream, tank, or pail; simple in construction, and easily worked. It throws a continuous stream. Price, \$9.00.

PHILADELPHIA LAWN-MOWERS.

As these machines may be seen in operation in nearly every town and village throughout the United States and Canada, any lengthy description of them is deemed unnecessary. They are but little over half the weight of the old style roller lawn-mowers, and are by far the

LIGHTEST-RUNNING AND EASIEST-HANDLED MACHINES MADE,

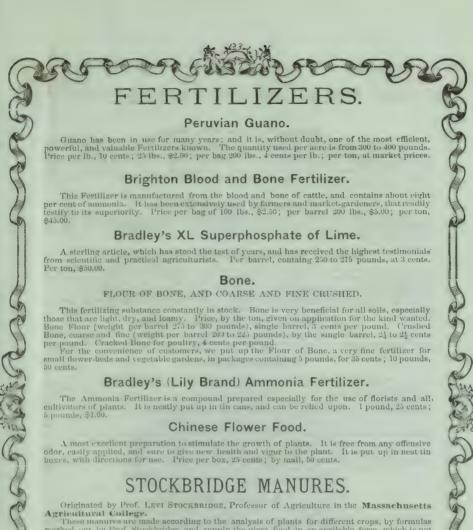

And are warranted to do as good work as any lawn-mower in the market.

Warranted to Work as Represented when Well Managed.

When ordering machines, mention width of cut, and style. Send for circular.

These manures are made according to the analysis of plants for different crops, by formulas worked out by Prof. Stockbridge, and supply the plant food in an available form, which is not obtained from the soil or air in sufficient quantity. These manures also recognize the fact that plants, like animals, differ, and require different food or in different proportions to insure the best results at the least cost.

SEND FOR PAMPHLETS FOR 1878, MAILED FREE,

Containing prices, the experience of farmers all over the country who have used these manures, and other valuable information.

Bowker's Lawn-Dressing.

This lawn-dressing is prepared from chemical ingredients, and is so compounded as to contain all the PLANT FOOD required by lawn grass; producing a luxuriant growth of a rich green color. 400 to 600 pounds sufficient for an acre. Price, 100-pound bag, \$4.00; 50-pound bag, \$2.25; 20-pound bag, \$1.00; 10-pound bag, 60 cents.

Grafton Mineral Fertilizer and Insect Destroyer.

18 C - 28

This article is a genuine mineral, without smell, and can be most successfully used to destroy cut-worms in the soil, and insects that infest plants; at the same time is useful as a Fertilizer. Per box, 25 cents; per barrel, containing about 400 to 500 pounds, 3 cents per pound. Price per ton, on application.

THE BEST AND MOST RELIABLE IN USE.

Garden Vases and many other decorative and useful articles for Lawn and Garden. Wood and Wire Plant Stands. Ornamental Iron and Wood Bird-Houses. Rustic articles of various forms, or made to order as required.

CURTIS, COBB & WASHBURN'S

Amateur Gultivator's Enide

TO THE

Flower and Kitchen Garden, For 1878.

Seed and Horticultural Warehouse,
65 Tremont St., under Tremont House,
BOSTON, MASS.

Curtis, Cobb & Washburn's

TO OUR FRIENDS AND CORRESPONDENTS.

We have much pleasure in submitting to your notice this new edition of orr *Anateux Cultivator's Guide," which, in the past, has been so popular with the lovers of horticulture. We feel assured, upon examination, this will be found to far surpass any existing work of similar description: we have spared neither time, trouble, nor expense in its compilation. It has been our endeavor to make it reliable, not only in the description of the great number of flowers and vegetables which are enumerated on its pages, but equally so in the full and complete practical directions for the successful growth of every variety.

The arrangement, though different from our last edition, is not new, having been adopted by eminent foreign dealers. To many it may not be very important; but, to the mass of our customers, we think it will commend itself as highly useful. All flowers and plants are divided into natural groups, and to know the character of one of these groups gives an idea of the whole. The Aster and the Coreopsis are familiar to almost every cultivator; and, when it is known that these belong to the composite order (Composite), it will at once be understood that any unknown plant belonging to this order resembles, in some respects, the above flowers. It is to convey this general information that we think the addition of the natural order is highly important.

It will be seen that we have omitted many varieties from our last edition which we

deem scarcely worth cultivating, to avoid confusion, and to give greater space to more

desirable kinds.

The character of every plant, whether annual, biennial, perennial, for the greeen-house, or whether hardy, or half-hardy, is stated; and, with our prefatory remarks upon the culture of each, there can be no difficulty in their successful growth. In addition to this information, our remarks on laying out flower-gardens will, we hope, not only prove a valuable aid to amateurs, but assist in disseminating a true taste for gardening art.

As specialities, we refer particularly to the very extensive list of NOVELTIES, many of them of rare merit, and difficult to obtain. Other specialities are our choice selection of them of rand Garman flower-goods, particularly, Doubie Asters, Garman Stopke, English

Trench and German flower-seeds, particularly Doubie Asters, German Stocks, English Double Hollyhocks, Camellia-flowered Bulsams, Carnation and Picotee Pinks, Double Zinnias, Double Portulacas, &c.; and of green-house plants, the Cineraria, Calceolaria, Gloxinia, Pelargonium, Chinese Primrose, &c. Many of these are of our own growth; and others are received direct from growers who produce their own seed, and some of whom raise them expressly for us. In our collection of German, French, and English flower-seeds we feel especial pride; for they contain all the truly beautiful varieties obtained in Europe during the last ten years, all selected especially for us, and never surpassed, if equalled.

Our Vegetable Seeds are such as we can recommend with the greatest confidence;

and, though we have not had the opportunity to test the latest additions, the dealers from whom they have been obtained leave little doubt of their real value. In conclusion, we have to acknowledge our indebtedness to various authorities for names, as well as occasional hints, and more particularly to that valuable book, Burr's "Vegetables of America," to

Buist's "Kitchen Garden," and to numerous English catalogues.

This ILLUSTRATED CATALOGUE will be sent on receipt of two 8-cent stamps. The wellknown reputation of our Seeds for the past twenty years is a sufficient guaranty of their quality.

ADDRESS:

CURTIS, COBB & WASHBURN,

SEED AND HORTICULTURAL WAREHOUSE,

65 TREMONT ST., under Tremont House, BOSTON, MASS.

TERMS, CONDITIONS, ETC.

Letters received.—All letters received are opened by one of the principals, and replied to by return mails. To facilitate carrying out this rule, we would respectfully ask our correspondents to give care that their orders may be written distinct from remarks and inquiries, that it may be seen at a glance, and filled with greater case. Make letters as brief as possible, as it requires great labor to attend to the hundreds daily coming in at the busy season; write the address plainly, and give the full name, with Post-office address, County, and State. We occasionally receive letters with no other address than the town, and in some instances without signature; which, of course, cannot be answered.

Execution of Orders. — Our rule is to despatch all orders as soon as received; but, as there are only a few months of planting season, and everybody anxious to get their seeds at the same time, it is sometimes impossible to prevent a delay of a few days: we make it a point to fill all orders in rotation, unless in cases of extreme urgency. It will be greatly to our advantage, and to that of the buyer also, if the orders are sent in early in the season, before the rush comes; and then we can give more attention.

Seeds, Bulbs, Plants, &c., by Mail, To any part of the United States where there is postal communication. The new postage-law authorizes the sending of SEEDS, BULBS, ROOTS, CUTTINGS, PLANTS, and SCIONS, at the rate of TWO CENTS for every FOUR OUNCES in weight, — the weight of the package not to exceed FOUR FOUNDS. Under this law, any of the seeds or bulbs named in this Catalogue will be mailed, free of postage, at the prices quoted, with the exception of PEAS, BEANS, CORN, and POTATOES, for which an additional remittance of eight cents for every pound is required.

Remitting Money.—Orders from unknown correspondents, to insure attention, should be accompanied with cash, or satisfactory reference. Remittances may be made in current bank-bills, or, what is better, Post-office orders, registered letters, or checks on Boston, New York, or Philadelphia.

Risk in sending Money, or Loss of Seeds.—Where Post-office orders, registered letters, or checks, are sent, they will be at our risk (but do not hold ourselves responsible where bank-bills are sent), and will guarantee the safe arrival of the goods at their destination.

Despatch of Orders.—In giving orders, please state explicitly by what conveyance they are to be forwarded, and, if by express or railroad, the names of the parties to whose care they wish them consigned at the various places of transhipment. When no particular route is designated, we forward according to the best of our judgment; but in no case do we assume any responsibility after the packages leave our hands, unless for our own mistrues, which are always cheerfully rectified.

Quality of Seeds.—As regards the freshness of our seeds, or their quality, we have nothing to add. Our numerous customers throughout the country know us too well to ask any additional guaranty than that of the many years we have labored to place before them all the treasures of the flower-garden or conservatory, selected from the best sources in Europe and our own country, or grown or originated by us. Our long correspondence with the cultivators of England, France, Germany, and Prussia has enabled us to be the first to possess every thing new, whenever introduced. The novelties described in our present Catalogue are nearly three times the number of those enumerated by any dealer in America.

As we occasionally hear complaints concerning flower-seeds, that they do not meet the expectations of the purchaser, fail to vegetate, &c., and as seedamen in general are often accused of sending out worthless seed, we would, in justice to ourselves and others beg of our patrons to give the following remarks a careful perusal:—

We are well aware, and happy to state, that our seeds do generally give perfect satisfaction (this we learn from multiplied testimony yearly increasing); but now and then a grumbler steps out, discouraged, and disappointed that the flower did not prove what he expected. This, certainly, can be no fault of ours. We aim to find accurate descriptions of all that we advertise; but we cannot guarantee to meet the wants of people who are expecting to realize their own ideas of flowers. For instance, we speak of some fine variety, a delicate beauty: it comes up modestly, breathing sweet perfume, a perfect specimen of its kind; while the sower is surprised and disappointed, expecting to behold some showy, brilliant flower. Also, of double flower and distinct colors, we give the greater care in selecting and testing, making perfection our standard; but, nevertheless, single flowers will

CURTIS, COBB & WASHBURN'S

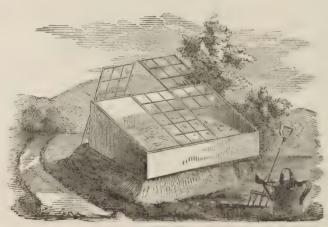

sometimes peep out, and mixtures cannot always be avoided. We find that some varieties are less reliable than others; but, while the good predominates, vex not over the simple loss of a few seeds, but try again with us to reach the standard.

That seeds oftentimes ease to grow is an established fact; but it is equally certain that that fact alone is no positive proof that the seeds are worthless. Probably ninety per cent of all the flower-seeds sold in this country go into the hands of persons who have no idea of how seeds should be grown. Jany of them, perhaps, accustomed to putting into the ground peas, beans, radishes, &c., fancy themselves acquainted with sowing seeds in general; and, when they fail, the blame is laid, not upon their ignorance, but upon the seedsmen. Is it to be wondered at, then, that there are occasional complaints that seeds do not grow?

An example or two, about which there can be no mistake, will explain our meaning. A few years since, some seeds sent from India to a great garden near London, where any amount of skill ought to have been found, were, in part, sown, and reported on as "bad, —will not grow." Two years afterwards, what remained of the original seed, although so much older, was sown, and it grew freely. Why was this? The explanation is simple,—the gardener had been changed. We have many times planted seeds which refused to grow, and, after waiting a sufficient time, have then planted more out of the same parcel, which vegetated readily. This is not an uncommon occurrence among gardeners. And why is this? We would answer, that the fault may have been in planting, or in the weather, or in some cause unknown; but one thing we do know,—the fault was not in the seed.

Complaints that seed are not good are perennial; and we quite believe, that, in nineteen cases out of twenty, they arise from injudicious treatment. We think a little consideration would convince any one, that, if we know our own interest, we should not be likely to send out poor seed, for the sake of saving a few shillings, at the risk of sacrificing the trade we are striving to extend. Nothing, indeed, is more barbarous than the way in which seeds are sometimes treated. Some are overwhelmed with earth; others are scattered on the surface; seme are allowed to lie in a puddle; some are planted where no rain can reach them; slugs are allowed to devour them; domestic fowls and other birds are permitted to feast on them. Another reason why seeds sometimes fail to give satisfaction is, that people are too much in a hurry to get their seeds into the ground; and probably more disappointment arises from too early sowing than from all other causes put together. And then, again, many will allow the weeds to grow with the seeds, until the former cannot be removed without destroying the latter; and we have known more than one case where the plants have been pulled up with the weeds,—the person not being able to distinguish between them. In all these cases, the seeds are found to be in fault, and the blame is most unreasonably thrown upon the seedsman.

We would suggest to our friends who fail to grow their seeds, that it may be as well to inquire whether any of these ingenious methods of destroying vegetable life have been practised in their own cases.

HOT-BED FRAME. - See p. 13

THE

Summer Flower-Garden;

CONTAINING

BRIEF DIRECTIONS FOR THE CULTIVATION OF ANNUAL BIENNIAL, AND PERENNIAL FLOWER-SEEDS.

NNUAL flowers are not only among the most beautiful ornaments of the summer flower-garden, but the ease with which they are cultivated, and the long time they remain in bloom, give them the highest claim to our attention and care. Without them, however much we may admire the various showy bedding-plants, a continuous and uninterrupted display of flowers, from spring till frost, cannot well be obtained; and when we add the charm of novelty, and the still greater one of variety, we have only enumerated a few of the claims of these most desirable and effective ornaments of the gardens of "the million."

In consequence of their simple culture, and the small amount of trouble they give to the amateur, as well as their comparative inexpensiveness for their rich array of beauty, they are yearly becoming more generally grown. Bedding-plants are charming objects; but the yearly propagation required for geraniums, verbenas, &c., the labor of potting and watering, and the expense of wintering them, are not within every one's means; but a few dollars expended in seeds, and a little pleasant labor in the sunny days of early spring, will give an amount of real enjoyment beyond belief. The most desolate garden may be made a scene of beauty in scarcely more than a month's time. Annuals are not what they were in former days. The skill of the hybridizer in the production of new varieties, and the diligence of the enthusiastic florist in the selection of the finest plants, have entirely changed the character of many of these flowers; and, if to this we add the new acquisitions from Japan, how could we well make up a summer-garden without them? What should we do without the grand Pæony-flowered Asters, the brilliant double Zinnias, the boldly-marked and rich-colored Petunias, the Double Portulacas,—like miniature roses,—the Heddewiggi Pink, the Tropæolum, &c.? These give an entire new feature to our annuals, to be cherished by every lover of beautiful flowers.

We therefore make no apology for giving a few brief hints on the cultivation of these, as well as some of the biennials and perennials, equally important in the decoration of the

flower-border.

ANNUALS.

Among florists and gardeners, the term "annual" is given to those plants which are sown in the spring, bloom and seed in the summer, and soon afterwards perish. A few are included among annuals, like the Marvel of Peru, &c., because they flower the first year; but they are only annual as regards treatment. By cultivators they have been divided into three classes; viz., Hardy, Half-Hardy, and Tender Annuals,—a very convenient classification; and as such we shall treat of them here.

HARDY ANNUALS.

These are so called because they do not require any artificial heat at any period of their growth, and are capable of enduring any ordinary weather from April to November; a frosty morning, not unusual in the former month, or even in May, doing them no injury, if advanced beyond the seed-leaf. Many of them may be sown in Autumn; and the young plants will make their appearance early in spring, and flower stronger than when it is deferred till April.

The Soil and its Preparation.—The best soil for annuals, and indeed for most flowering plants, whether biennials or perennials, is a light, rich loam, neither too sandy nor too stiff.

5

COBB

In such they grow readily, and attain to great perfection of bloom, with but little care; but it is hardly necessary to say, that few persons have just such a soil, nor is it possible often for the cultivator to have much choice. He must take such soil as he has, and make the most of it, and by the application of proper manures, or sand or clay, he can bring it to such a condition as to answer all the purposes of a flower-garden. Moving large masses of soil is very expensive; and writers who advise the addition of rich loam seem not to be aware of the difficulty of procuring it, or the expense and labor attending the same. For the complete garden of the wealthy, this may and should be done; but the mass of cultivators need not fear of obtaining good results without it. Deep and thorough trenching in the autumn, if possible, and the application of very old decayed manure or leaf-mould, will give the amateur a well-prepared and suitable soil. If the situation of the garden is low or damp, first of all it should be well drained, for, in addition to the injury from excessive moisture, such soils are cold, and the young plants are injured by early frosts, when they would escape damage in one of the opposite character: neither should the situation be too dry, as, in this case, the plants would suffer in summer, and present a meagre in place of a vigorous bloor the soil is too light, a thin layer of clay, if to be had, spread over the surface in the actumn, and dug in, after being pulverized by the winter frosts, in the spring, is the best remedy. This, with the use of old manure, — that which has lain a year or more, and been frequently turned over till it becomes thoroughly decayed, - will keep the garden in good condition. No unvarying rules can be given: much must be left to the judgment of the amateur. He must understand that the soil of a good garden should be deep, well pulverized, friable, and rich; and, if the opposite, to make it as near that as possible.

When the flower-garden is to be a speciality, — a piece of ground set apart for that object, and laid out in geometrical order, and all the beds edged with box or thrift, — then more pains ought to be taken; and those who are about to do this, if they have not the requisite information, will consult something more than a catalogue. Our hints are intended for the mass of the people who love flowers, who have but little leisure, and do not wish to incur

eriod for Sowing. - This must depend much upon the season as well as the locality. Our Northern springs are so variable that no definite period can be named. As a general rule, the proper time to commence sowing is about the middle of April, though a few sorts may be planted as soon as the ground can be got ready; and, for a succession, the sowing should be continued until June. In the Southern States, of course, January, February, or March will be the time to sow, as they correspond with April, May, and June of the North. The Californian annuals, now so numerous and so ornamental, are very hardy, and should be sown early, as they get well established before the heat of summer. To avoid all danger of injury, the sowing may be deferred till the last of April; but, when a little labor is of no consideration, the sowing may be made earlier; and, in case of failure to grow, or subsequent injury from frost or wet, another sowing may be made when the weather is more favorable. Because we recommend April, it is not to be understood the sowing must be made at that time. The only object is to obtain a vigorous growth and early bloom. If sown in any part of May, they will flower later, but abundantly throughout the latter part of summer.

Mode of Sowing.—This must be varied according to the style of the garden and the variety to be sown. Many of the most showy and beautiful annuals are very impatient of removal; and these must be sown where they are to remain and flower. Such are the Lupins, Sweet Pea, Eschscholtizia, Poppies, &c. Indeed, most of the tap-rooted annuals will not bear transplanting. Other annuals, which may be transplanted, and some of which flower stronger for removal, may either be sown in the places where they are to bloom, or in prepared beds, from whence they are to be transplanted to the flower-garden. In small gardens, undoubtedly the best way is to sow where they are to remain, thinning out the superfluous plants. This gives the least trouble; but in larger gardens, or where there are beds of early spring bulbs to be filled, the safest and best plan is to sow in well-prepared beds, and, when the

young plants are of proper size, to transplant to the flower-garden.

Never sow seeds when the ground is very wet, particularly early in the spring. Select a time when the soil is neither wet nor dry. The sowing must be left to the taste of the cultivator, and the extent of surface. If were are vacant beds, the seeds may be sown in rows across the bed; but if in the border, where there are only limited spaces among the perennials or bulbs, they may be planted in masses or groups, in which mode we think annuals produce the greatest effect. Our plan has always been to mark out a circle a foot or more in diameter, and level the ground evenly and nicely with the rake; then, with the back of a trowel, press the surface firmly down; around the circle make a slight drill of the proper depth, in which the seeds are thinly sown, covering them lightly, and again pressing the earth upon the seeds with the back of the trowel. If the soil should happen to be too wet, or stiff and adhesive, fill the drill with some light sandy loam, and make firm ordered.

And here we should remark that great care should be exercised in covering the . It is the great error to cover too deep; and the cause of more than half of the complaints against seedmen of selling old and worthless seeds comes from inexperience or want of judgment in

sowing. No rule can be given in this respect; but, as a general guide, all large seeds, such as Sweet Peas, Lupius, &c., may be sown half an inch deep,—smaller, less; and for the smallest, such as Clarkia, Pinks, &c., a covering of one-sixteenth of an inch suffices. If sown too deep, they are longer in germinating, and are liable to decay. Avoid the general error of sowing the seeds too thick; as it causes an elongated and feeble growth, which no

subsequent thinning will entirely remedy.

If the weather should be warn, or the soil very dry, it will be advisable to give a slight watering with a watering-pot with a fine rose. It is not often that seeds planted in April need watering; but later in the season they frequently require it. Use water of the same temperature of the soil; or, if warmer, it will do no harm. The waterings should be given early in the afternoon, and repeated every few days; as, when the seeds begin to swell, they are more susceptible of injury from drought, and the young plants often perish when it is neglected. A good plan with very small seeds is to cover them with an inverted flower-pot, being care all to remove it before the young seedlings appear above the surface, otherwise they will be drawn up weakly, and are likely to be injured by the hot sun or a cool night. Seeds vary in their period of germination. Some will be above ground in a week, while others require two or three weeks.

As soon as the seedlings have made three or four leaves, and are an inch high, they should be thinned out. If they are kinds which will bear removal, they may be replanted in vacant spaces in the border. No rule can be given for thinning. Tall-growing plants with spreading branches will require more room than slender-growing dwarf kinds; and in this the cultivator must be guided by the Catalogue. Stir the soil around the plants from time to time; and, if they appear crowded, a second thinning will be of great benefit to those that remain. If the growth is not strong, from the nature of the soil, apply occasionally a very

small amount of guano or bone-dust.

Transplanting.—Presuming that many cultivators will sow their seeds in prepared beds, whence the plants are to be removed to the borders to bloom, it is necessary that the work should be carefully performed to insure success. Transplanting should, if possible, always be done in cloudy weather, and towards evening. If the soil is dry, the plants will require a light watering to settle the earth around the roots; and, if warm sunny days succeed the operation, they will root all the better to have a little shade for a day or two, which may be done by spreading an old newspaper over them, or covering with a mat, removing either at night. All large-growing plants should be transplanted singly; but many of the smaller may be removed in patches, without any trouble, if the soil is previously well watered. We have found very little difficulty in moving Zinnias, Asters, and smaller plants, after they have begun to bloom. After the plants are established, they will need no other cure than to *io up the taller-growing sorts to stakes to prevent the wind and rains from beating them down to the ground, and injuring their blossoms.

HALF-HARDY ANNUALS.

We have already remarked that half-hardy annuals are those that require the aid of artificial heat to assist germination; but it should be remarked that this is not absolutely necessary if the sowing is deferred until the ground is warm,—say the last of May. This is exemplified in the Portulaca, which sows itself: but the plants never appear above ground till June; and those who do not wish the trouble of sowing seed early should plant in open ground in May. But, to gain time, and insure an early and abundant bloom, it is best to plant early, and assist the growth by a gentle artificial heat. Some of the most magnificent annuals are embraced in this class, of which the Aster, Zinnia, and Balsam are examples. The cheapest, most convenient, and simplest mode of doing this is the ordinary hotbed of stable manure, which gives a gentle bottom-heat quite sufficient for any of this class. Its construction is simple, and generally understood by most owners of a garden; but, as there may be some of our readers who do not know how to make a good hotbed, we add the details at the close of our remarks, observing, however, that it is so valuable an aid in the forwarding of flowers as well as vegetables, that no one having a garden can well dispense with it.

Presuming that the bed is made and all ready for use, the seeds may be sown on the prepared soil, just the same as in the open ground, and afterwards transplanted to the borders; but, as this is often attended with many failures in inexperienced hands, it is the safest to sow the seeds in pots or pans; if in neither of these, in shallow boxes. The pots should be about four or five inches in diameter, and should be perfectly clean. The soil should consist of a uniform compost of light, sandy loam, enriched with some fine leaf-mould, avoiding any raw or crude manures, which are certain to injure the young plants. Put in a few crocks at the bottom of each pot, for drainage, and fill to the brim with the compost, giving the pot one or two gentle knocks on the bottom to settle the earth. which should be within half an inch of the rice. Level the surface by gently pressing it with the bottom of a pot, or a circular piece of wood made for the purpose, as this will not only be beneficial to the seeds, but assist in distributing them more evenly and regularly over the soil. Observe the same rules, in regard to covering, that we have already named. Some kinds will

COBB & WASHBURN'S

need nothing more than a thin sprinkling of earth just to fairly cover the seeds; and each pot should have the surface again gently pressed down; a slight watering with a very fine rose will complete the operation of sowing.

When all the pots are filled and planted, and marked, as they should be, with the mane of each, and date of sowing, upon a neat label, remove them at once to the hotbed or frame, and place them perfectly level, so that each pot may receive its proper proportion of water evenly over the surface. If there are but a few pots, and a greenhouse is at hand, they may have a place on a sunny shelf, near the glass, shading them during the middle of the day. Shading will also be necessary in the hotbed. The temperature should not exceed 75° or 80°, or the seeds will germinate too quick, and be drawn up weakly. As the seedlings appear above ground, give air by tilting the sashes at the back. Give water as the pots require it (which is usually once a day), and always of the same water as the pois require it (which is usually once a day), and always of the same temperature of the bed, and be careful in the operation not to wash away or destroy the young and slender seedlings. During cold nights, a mat may be thrown over the frame, which will prevent the loss of heat, and maintain a more even temperature. As some of * the seeds will make their appearance before others, those that appear above ground should be placed together towards the back of the frame, where they can have a greater abundance of air, and be more freely watered, than the others. As the plants acquire a proper size, they should be thinned out, so as not to injure those that remain; and then, when further advanced, should be transplanted into four-inch pots, — one, three, or five plants in each, according to the variety, — using a compost similar to that in which they were sown, replacing the pots in the bed, and shading slightly till they are well established, and able to bear the full sun. Those that are later in vegetating should be treated in the same manner, until all are transplanted, unless it is such kinds as will not bear removal safely; and must be allowed to remain in the pot in which they were sown, thinning them out, so that not more than three or five plants are left. The Cypress-vine, Thunbergia, &c., are of this character.

By the middle of May, the seedlings will be ready for transferring to the beds or borders where they are to bloom; but, before this is done, the plants should be "hardened off," as it is termed, in order to prepare them for the change. This is effected by gradually giving is termed, in order to prepare them for the change. the plants more air, and, when the weather is favorable, both day and night, removing the sashes wholly during the day; or, if more convenient, removing them to a cold frame, where they can be fully exposed in the daytime, and protected at night, if cold, with a covering of mats. Much must be left to the judgment of the cultivator and the amount of available space, the object being to prevent the plants from being injured by a too sudden exposure Proceed, in transplanting, as we have already recommended under that to the open air.

head for hardy annuals.

TENDER ANNUALS.

We have stated that the classification of hardy, half-hardy, and tender annuals was a convenient one; but, really, there is scarcely an annual but will grow freely in our climate in the open ground in summer. The term tender has been applied by English gardeners because the plants do not attain full perfection unless grown in pots in the greenhouse. Such are the Globe Amaranth, Balsam, Egg-plant, &c. All the tender annuals, therefore, may be treated in the same manner as the half-hardy, and with equal success.

BIENNIALS AND PERENNIALS.

Biennial and perennial plants are almost indispensable additions to the flower-garden, displaying their blossoms both early and late, succeeding and even flowering with the spring bulbs, and continuing long after the frost has destroyed the hardiest annuals. They are also so easily cultivated, and require so little care for their great amount of beauty, that they must be ranked as the most permanent and showy objects of the flower-border. only need name the Larkspur, Phlox, Lychnis, Coreopsis, Saxifrage, &c., as a few among the many imposing and elegant groups.

Biennials are those plants that generally do not flower until the second year, and, after These include, however, many splendid species, such as the Foxglove, Canterbury Bells, Sweet Williams, Hollyhocks, &c. Perennials are plants which generally do not bloom until the second year, but continue to bloom for years in succession, and may be propagated, after once obtained, by division of the roots, growing more vigorously and

flowering better if divided and replanted every three or four years.

The proper time for sowing the seeds of hardy kinds is in April or May, at the period of sowing the hardy annuals, in order to obtain a good strong growth the first year, and a greater abundance of flowers the second; but the sowings may be continued with success as late as August, after which the plants will not become strong enough to flower the following year. Whether the seeds are sown in beds or in the border, the young plants should be thinned out, and afterwards transplanted, just as we have directed for hardy annuals, only giving them more room, and encouraging a vigorous growth by hoeing, watering, &c. On the approach of severe frosty weather, protect the plants with a light

covering of leaves or coarse manure, and the succeeding year they will blossom in great profusion.

SPECIAL DIRECTIONS TO AMATEUR CULTIVATORS.

In addition to the preceding remarks, which are given as the results of our own practice for many years; and which, we think, are adequate for all general purposes, the following special directions are added for the guidance of amateurs in the treatment of many of the more choice and new flowers enumerated in our Catalogue. If carefully followed, it is hoped they will remove all causes of failure in the attempt to cultivate many of the most beautiful plants.

Zinnias may be treated precisely like the Aster. The double varieties, in eight distinct colors, are superb ornaments of the garden.

Epacrises, Heaths, Azaleas, and Rhododendrons should be planted in boxes or pans, well drained, and filled with light, very sandy loam, with a small quantity of peat. Make the earth firm, and give a thorough watering before sowing. Cover the surface with a little sand, upon which the seed should be thinly scattered, covering with the least possible quantity of fine sand. Place the pans or boxes in the greenhouse, where they can be wholly shaded from the mid-day sun, and lightly damp the surface when dry. The young plants will make their appearance in three or four weeks; and, when strong enough to handle easily, transplant into boxes an inch or two apart, and gradually harden them off, so as to remove to frames or the open air.

Calceolarias, Cinerarias, and Chinese Primrose require similar treatment. The seeds of the former are so minute, that they are liable to be destroyed by covering; and complaints are frequent of the failure to make the seed grow. If the following directions

are carefully observed, an abundance of plants may be easily raised: -

The seed should be sown in pots prepared in the following manner: The pot to be half filled with drainage; over that, rough siltings of the mould, and the surface covered with soil as fine as possible, half of which should be composed of silver sand. When prepared thus, it should be watered with a fine rose, immediately after which sow the seed carefully, without any covering of soil. The pots should then be placed under a close frame or hand-glass, in a shady part of the garden (no artificial heat being required). In large establishments, of course, they may have propagating or other houses that will do, where the same kind of moist temperature could be obtained; but any exposure to the sun must be carefully guarded against by mats or paper. If the situation is of the proper temperature, they will require watering but very seldom. Directly the seedings are strong enough, they must be pricked off in pots prepared as before, and placed in the same situation. From the store-pots they will require to be potted off singly; after this they will grow very rapidly. Through the winter the plants will thrive well on the shelves near the glass, in the greenhouses; and to obtain fine specimens, they must be shifted freely till the flower-stalks have started, and should always be smoked with tobacco directly the green-fly appears, as no plants in cultivation so readily suffer from this insect as the Calceolaria.

It is necessary to remark, that one of the most frequent causes of the appearance of these injurious insects is the plant becoming root-bound; to avoid which evil, it is important that

it should frequently be repotted during the growing season.

Acacias of all kinds should have scalding water poured over the seeds, and be allowed to soak for twelve or twenty-four hours: they should then be planted in pots, in light, rich, sandy soil, covering one-fourth of an inch deep, and placed in the hotbed or greenhouse.

Globe Amaranth, Linum, and Cypress-Vine seeds should be soaked in tepid water for twelve hours, to insure a quick germination. Rub the seeds with a little dry sand when ready for sowing.

Liliums of all kinds should have their seed planted immediately they are gathered, if possible, as they vegetate sooner. They remain good, however, for three or four years; but, when sown in spring, do not often vegetate until the second year.

Cyclamens should be sown in the greenhouse or hotbed, in pans of light rich soil, well drained. Transplant singly into pots, and keep them constantly growing the first year.

Stocks of the winter-flowering varieties should be sown in July, and pricked off singly into small pots, shifting them as they require it, and keeping them in cold frames as long as it can be safely done.

Canna-Seeds have a hard, horny covering, and require to have the seed soaked in warm water for ten or twelve hours, planting them in hotbed while the heat is brisk and strong. Transfer to the open ground June 1st, and take up the roots before hard frosts.

Gloxinias and Archimenes require to be grown in pots in the greenhouse, or a marm one. The soil should be light and rich, — leaf-mould, loam, and sand.

Ferns are easily raised from the spores (or seeds) with a little care. Sow in pots, which should be half filled with a good drainage of crocks, and the remainder, to within an inch of the rim, with coarse sandy peat, or leaf-mould; make the surface smooth, and cover with a thin layer of sand; on this sprinkle the spores. Set the pot in a pan of water, in a warm, shady part of the greenhouse, and cover with a pane of glass. In a month or two, the plants will be ready to pot off singly in small pots.

CONSTRUCTION AND MANAGEMENT OF HOTBEDS.

We have already alluded to the importance of a hotbed for the successful growth of many of the half-hardy annuals and more delicate greenhouse plants. Though most or all kinds of seeds may be raised in a frame without bottom-heat, yet this can only be done so late in the season, when the weather has become warm, that many of the annuals are late in blooming, and the greenhouse plants do not ripen and mature their wood, and are therefore ill adapted to winter well. It is to obviate this that the hotbed is recommended to all ama-It is so easily made, and at such slight expense, that it will well repay all who would secure an abundance of flowers early in the season. (See illustration, page 4.)

Situation of the Bed. — This should be in a warm position, fully exposed to the sun facing the east or south, and sheltered by a fence or hedge on the west or north. The soil should, if possible, be light and dry, as in this case the bed can be sunk a foot or more in the ground; but, if damp or cold, it should be built upon the surface.

Making the Bed. - Manure fresh from the stable is best. This should be thrown over Making the Bed. — Manure fresh from the stable is best. This should be thrown over and thoroughly shaken up with the fork, making it into a conical heap. In this state it should be allowed to remain four or five days, at the end of which time it should be turned over, shaking it up as before. At the end of another three or four days, it will be ready to make up the bed. Lay out the ground six inches larger than the frame, and put down a stake at each corner. The frame may be of any size; but the most convenient is nine by three feet, which will take three lights, three by six feet, the ordinary size, which can always be had ready made. Proceed to build up the bed to the height of two and a half or three feet, making it rather firm, and watering, if the manure is dry. When the bed is finished, but on the lights, and let it stand to settle and exhaust the violent heat. In a day finished, put on the lights, and let it stand to settle and exhaust the violent heat. In a day or two add three or four inches of light sandy loam, spreading it evenly over the bed. If the seeds are to be sown in the soil of the bed, two or three more inches should be added; but, if in pots, no addition will be necessary.

The pots being ready, and sown with the various seeds, should be put into the frame, shading them during the day, and regulating the temperature by tilting the lights at the back, both night and day, and covering at night with mats. Plunge the pots in the soil, and, with proper care, the seeds will soon be above the soil. A thermometer placed in the and, with proper care, the seeds will soon be above the soil. A thermometer placed in the bed will be the safest guide to the inexperienced. It should not rise above 85° in the day, nor sink below 60° at night. As the heat declines, linings of fresh manure should be applied around the outside of the bed; but, ordinarily, for seeds this is not necessary.

The length or number of the frames is immaterial; but they should be nine to twelve

inches deep at the front, and fifteen to eighteen inches at the back. This will give a good slope to carry off the rain. Cold frames are simply the hotbed-frame set upon a warm spot of ground, covering it at night to keep in the warmth accumulated during the day.

Commendations.—To attempt the publication of the numerous commendatory letters would fill several pages of our Catalogue. Gratifying as this would be to us, we are compelled to omit even the briefest extracts from the hundreds of letters expressing the satisfactory manner in which their orders have been executed, and the pleasure derived from the cultivation of our seeds.

THE FLOWER-GARDEN.

ITE arrangement of a flower-garden must depend so much upon the taste or fancy of the cultivator, that it is very difficult to lay down any rules applicable to general use. All we can do to aid the inexperienced is to give such plans as display correct principles in their general features, which will serve as a guide in grounds of smaller or larger extent. Of course, we have reference to flower-gardens, or spots of ground set apart for annuals, bedding-plants, or bulbs; as any thing more extensive would be beyond the scope of a catalogue.

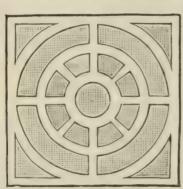

Where the flower-garden already exists, and is faid out in beds or borders for miscellaneous plants, all the information necessary to the

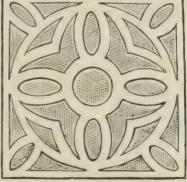

amateur will be found in our preceding remarks, except that, perhaps, in reference to the disposition of colors. If, however, the form is not a fanciful one, or one laid out in the true principles of the geometrical style, it may be remodelled upon some plan which will combine the merits of those we now annex.

Commencing with the simplest form of ground, where there is no pretension to artistic display, the two following will be found well adapted for annuals or bedding-plants, or the

two combined.

In the first plan (No. 1), the ground may be arranged as follows: In the centre may be double Zinnias, if a grand display is desired; but if not, then Zinnias, Marigolds, Asters, and similar tall-growing annuals, placing the tallest in the centre. The eight small beds adjoining the centre one may be planted in alternate colors, or mixed with Clintonia, Portulaca, Verbenas, Pansies, Agrostemma, Lobelias, &c. The four larger beds may be planted in four different colors, or mixed, or in ribbon style; in the latter case, using Perilla Nankinensis for the centre row, and other decided colors for the outer rows, which should be dwarf at the edge. The four corner-beds may be filled with Mignonette, Sweet Alyssum for the fragrance, or with other more showy plants.

No. 1.

No. 2.

The second plan (No. 2) admits of a greater display, and particularly if masses of one color are desired. The centre may be filled with any tall plants of one color; viz., Zinnias, Asters, Marigolds, or Balsams. Two of the four oval beds may be Portulaca, scarlet and white, or golden and scarlet; the other two with blue and white bobelia, or crimson and white Candytuft. Two of the four large beds between the oval ones may be planted with

MASHBURN'S Eurtis. COBB &

Tropæolums in two colors, and the other two with crimson and variegated Petunias. four small beds may be planted with Abronia Umbellata, Nolana, Phlox Drummondii, and Linum Gravdiflora. The four oval corner-beds may be planted with ornamental-foliaged plants, Perila in two, and Coleus Verschaffeltii in the other two. Four of the small corner-beds may be filled with Mignonette and Alyssum, and four with Dianthus Heddewegii. These may be varied to suit the fancy of the possessor with the newest annuals described in the Catalogue, selecting them according to colors and height of growth. All the beds should be edged with box or thrift. The extent of ground is thirty-two feet square.

15

26

For more artistic and complete grounds, 've add plans from one of the most ele-

gant flower-gardens of England.

The first plan (No. 3) is extensive and elaborate in design, and evinces artistic skill and arrangement of a high order. The length of the garden is a hundred and sixty feet, and the width seventy-two feet, The walks are of gravel, and the beds are all edged with box. It may be filled with bedding-plants or with annuals; and, supposing the amateur to desire a mixture of the two, the following is an appropriate list; Scarlet Geraniums and Verbenas being the most effective of bedding-plants:-

1. Verbena (blue).

Verbena (white).

3. Pansies, of the fine showy sorts.

4. Portulaca (white).

5. Tom-Thumb Geranium. Verbena (striped).

7. Portulaca (golden).

8. Campanula Carpatica, with Trec-Rose in the centre.

The same.

10. Tom-Thumb Geranium.

11. Portulaca (white).

Verbena (striped) 12.

13. Portulaca (golden).

14. Pansies, of the fine showy sorts.

Verbena (white).

Verbena (blue). 16.

17. Ageratum.

18. Heliotrope.

Tom-Thumb Geranium. 19. 20. Verbena, Sunset (rose).

21. Portulaca (golden).

22. Portulaca (scarlet).

23. Same as No. 8.

24. Geranium, Lucia Rosea (pink).

Tom-Thumb Geranium.

Tom-Thumb Geranium. 26.

27. Geranium, Lucia Rosea (pink).

28. Portulaca (scarlet).

Tom-Thumb Geranium. 29

Heliotrope. 30

Verbena, Sunset. 31.

Portulaca (golden).

33. Ageratum.

34. Same as No. 8.

Vase, or Statue. If a vase, to be filled with Verbenas, Petunias, &c. If a statue, to be surrounded with a circle of Oxalis Floribunda.

But, when it is intended to be filled with annuals, this may easily be done by substituting Candytuft, Alyssum, Eschscholtzia, Lobelia, Agrostemma, Petunias, Dwarf Convolvulus, Clarkias, &c.

AMATEUR (CULTIVATOR'S GUIDE.

COLLECTIONS OF FLOWER-SEEDS, BY MAIL, FREE OF POSTAGE.

In order to more extensively disseminate our choice varieties of Flower-seeds throughout the country, giving those who reside at a distance the same facilities for procuring them as those who have the opportunity to make personal application, we put up select assortments expressly for sending by mail, giving particular attention to this department of our trade. The low rate of postage enables us to supply distant customers with all the choicest seeds upon the same terms as those who are near the market. Orders may be forwarded to us with the understanding that the seeds we furnish are of the very best quality, and the selection such as will gratify every purchaser. Our collections are made up with great care, and all the varieties, unless those entirely new, are such as we have seen and cultivated ourselves, and can confidently recommend; many of the superb double varieties being such as have been raised from the fine flowers, specimens of which have obtained the highest prizes of the Massachusetts Horticultural Society.

No. 1 contains twenty-four varieties of choice and beautiful Annuals . \$1.00
No. 2 contains twenty-four varieties of the finest hardy Biennials and Perennials . 1.00
No. 3 contains ten varieties of extra fine Annuals and Perennials, including the beau-
tiful French Asters, Double Camellia Balsams, Double German Stocks, and
other choice flowers
No. 4 contains five varieties of very select flowers, including the best large English
Pansies, Carnations, new Verbenas, new Double Zinnias, &c 1.00
No. 5 contains one hundred varieties of Annuals, Biennials, and Perennials, including
new and choice varieties
No. 6 contains fifty varieties of Annuals, Biennials, and Perennials 2.50
No. 7 contains twenty varieties of hardy Annuals, Biennials, and Perennials, for
autumn sowing, in August and September
No. 8 contains fifteen different and choice kinds of greenhouse-plant seeds 3.00
7 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1

The seeds in these assortments are all of our own selection. Purchasers who would rather make a selection from the Catalogue can do so, and a proportionate discount will be made.

FORMATION OF CLUBS.

The extensive distribution of our seeds is an especial object. Our Catalogue has been prepared with much labor; and it has been our constant aim to make it a complete and safe guide to the cultivator, both in the selection of varieties and their growth. As an additional inducement to individuals who desire to possess a large collection, or for the formatior of clubs for the same object, we offer to send by mail, free of postage, to any address in the United States, on receipt of the amount of the order, seeds selected as follows:—

Purchasers remitting \$1.00 may select seeds at Packet prices, amounting to \$1.15

**	**	2.00	46	66	4.6	45	66	2.35
66	6.6	3.00	0.5	64	66	66	46	3.65
66	64	4.00	6.6	6.6	46	66	46	4.95
4.6	66	5.00	4.6	6.6	4.6	66	66	6.25
44	6.6	10.00	66	4.6	6.6	64	46	13.00
44	66	20.00	66	6.6	66.	66	44	27.00
66	44	30.00	6.6	6.6	66 .	66	44	41.50

Persons desiring us to make their selections may rely upon our sending only those which are really showy and handsome, and easy to cultivate. We believe that our experience will enable us to make selections that cannot fail to give entire satisfaction to any lady or gentleman who may send us their orders.

In sending orders for seeds by mail, it will be only necessary to give the date of the Catalogue from which the selection is made, and the numbers, instead of the names, of the varieties. The name of the person to whom they are to be sent, and the names of the Town and State, should be so plainly written, that there may be no mistaking a single letter. We often receive letters containing money, the signatures of which are so indistinct as to make it almost impossible to decide where and to whom the seeds are ordered to be sent.

The above prices apply only to flower and garden seeds in packets; for prices by ounce and pound, see vegetable-seed department, in this Catalogue. Prices to dealers on application.

Address.

CURTIS, COBB & WASHBURN, Boston, Mass.

THE

AMATEUR CULTIVATOR'S GUIDE

TO THE FLOWER-GARDEN.

ANNUALS.

To aid in making the selection of seeds, the botanical name is given, and the popular name when there is such, together with the natural order to which it belongs, as indicative of the general character of the flower. These, with the full remarks, will enable the amateur to make a judicious selection.

to make a judicious selection.

Wishing to make this book as simple as possible, we have divided the flower-seeds into classes, viz.: Annuals, Biennials, Perennials, Greenhouse, Summer Climbers, Everlast-

ings, and Ornamental Grasses.

In giving orders for seeds, it is preferable to mention the numbers; but, as the numbers are often changed, it is absolutely necessary to give the date of the Catalogue.

ABRONIA UMBELLATA.

ABRONIA. NAT. ORD., Nyctaginiacew.

A charming plant, with Verbena-like heads of sweet-scented flowers. Very effective in beds, rockwork, or in baskets suspended in a conservatory; growing freely in any light, rich soil, and flowering from August to October.

PRICE.

1 Abronia Umbellata, rosy-lilac, half-hardy annual; from California. ½ ft. high \$0.10

			ASTER. NAT. ORD., Composite.	13
- 4			This splendid class of plants is not only one of the most popular, but also one of the most effective, of our garden favorites, producing in profusion flowers in	
1			which richness and variety of color are combined with the most perfect and	
- 1			beautiful form. It is indispensable in every garden or pleasure-ground where an autumnal display is desired. For flower-beds it stands unrivalled.	1
			The Aster may be divided into two grand sections,—French and German. The	1
- 1			French, as improved by Truffaut, has flat petals, either reflexed or incurved, the	1
4			former resembling the Chrysanthemum; whilst the latter, by turning its petals towards the centre of the flower, forms, when well grown, a perfect ball, and is	1
i i			best described by its resemblance to the Pæony. The German varieties are	
			quilled; and the most perfect flowers are surrounded by a circle of flat or guard petals, as in the Hollyhock. The flowers of these are particularly admired for	1
- 1			the exquisite symmetry of their form. The dwarf-bouquet varieties of this	1
- }			beautiful germ grow from nine to fifteen inches high, and are particularly adapted for small beds, edging, or for pot-culture. They often flower so pro-	1
			fusely as entirely to hide their foliage. All the varieties delight in a rich light	â
			soil; and, in hot, dry weather, should be mulched with well-rotted manure, and	
			frequently supplied with manure-water. This labor will be amply compensated by the increased size, beauty, and duration of the flowers. Half-hardy annuals.	3
	9	29	Aster French Paeony Perfection. The greatest perfection in form, size,	1
1			and fulness of flower, of the Pæony class. In this variety the petals are	7
- 1			turned towards the centre, and a flower not quite in full bloom: resembles a ball; a beautiful variety of colors; mixed. 1½ feet	.10
		30	Truffaut's French Parony-flowered. Grown by Truffaut, the	
		0.1	celebrated florist of Versailles, France. Twenty colors, mixed	.25
		31	large white centres, surrounded by scarlet, carmine, violet, blue, and many	
			other colors. Flower large and double; all colors, mixed	'.10
1		32	— Chinese. The variety most commonly grown. Mixed	.05
1		ंउ	- Original Chinese, with folded Petals. Mixed. The petals of this variety are folded in their length; the flowers are of an unusual size, from	1
1			three to four inches in diameter; present the most striking colors of all	70
an		2.4	Asters; plants tall . German Dwarf. A fine variety, growing only 4 foot high; flowers similar	.10

	NO.		RICE.	2
	01	Aster Dwarf Chrysanthemum-flowered. A valuable late variety, coming in after many other varieties are gone. They grow very uniform in height,		200
		blooming so profusely as to completely hide the foliage; mixed	.10	#7
	38	Pyramidal. A very popular variety, growing very uniform in height		P.
		and shape. The form of flower resembles an inverted pyramid. Some are		1
	00	quilled, others not; a fine mixture	.10	1
	39	- Globe-quilled. This is a fine variety. The flowers are formed in the	** 0	17
	40	shape of a half-ball. Mixed	.10	1
	40	It does not flower so freely as many other varieties. In favorable cases if		17
		produces four to six flowers, of which the chief blossom is often four inches		9
		in diameter. Mixed	.15	16
	41	Imbricated Pompon. One of the most pleasing styles; of pyramidal		-60
		growth, with 'medium-sized flowers of the most perfect form, very double,		1
		and densely imbricated. Six colors mixed	.10	1
	42	- Porcupine, or Hedgehog. The flowers are composed of long, quilled,	10	1
	40	curious-looking petals: hence the name. Mixed	.10	1
	45	 Ranunculus-flowered. A small flowered variety, very double, imbricated, surrounded by a range of green leaves; valuable for bouquets. Finest mixed 	10	1
	44	Reconflavored. A class of great marity reduct growth fine helds and are	.10	7
	E'E	- Rose-flowered. A class of great merit; robust growth, fine habit, and profuse bloomers. The flowers are as large as Pæony Asters, beautifully imbricated, of oval form, and very double. In habit, height of plant, and form of flower intermediate between the tall Chrysenthemen and Parcy Parker.		1
		bricated, of oval form, and very double. In habit, height of plant, and form		-
		or nower, interinculate occurred the tail only santhemum and I acony I circu-		1
		tion Asters; a favorite class. Ten colors. Mixed	.15	}
	45	- Reid's Improved. An improved variety taller than the preceding, and the	4.0	1
	40	finest of the quilled varieties	.10	-
	40	Victoria. This beautiful kind forms a new class, allied to the Giant Emperor but superior to that in habit of plant and form of flower. The plant		
		ror, but superior to that in habit of plant and form of flower. The plant is very robust, bearing itself without assistance of a stick, forming a hand-		1
		somely-branched, compact bush, crowned with from ten to twenty large and		
		smaller flowers, half of them of the size of the largest Giant Emperor Asters,		-
		which are of a beautiful globular form, regularly imbricated. Mixed colors	.15	
	47	- Schiller. This variety, of new form, is splendid in its formation; each indi-		
		vidual plant will make a show for itself; pyramidal; the leaves round, the		
		stock regular and ornamental, the flowers splendid, double, and well set. 11 feet in height. Mixed colors	.10	
	48	- Giant Peony Perfection. This new and fine variety was produced from	.10	
	10	the New Giant Emperor and Pæony Perfection. The flowers not only reach,		
		but surpass, the enormous dimensions of the Giant Emperor Aster. They		-
		are, however dissimilar to the preceding; flowers perfectly double. Mixed	.15	
		AUBERGINE (EGG PLANT). NAT. ORD., Solanaceæ.		
		The varieties enumerated are the eatable fruited kinds so extensively grown		
		about our cities. The white and scarlet are sometimes grown in pots, and are		
		very interesting, being covered in autumn with beautiful egg-shaped fruit. The		
		scarlet variety is a great novelty. They succeed in a warm southern location.		
	40	Half-hardy annuals.	OF

111	- New Dwarf Variety. Compact habit; fine for pots or beds. Double. ½ ft.	•10	
	LARKSPUR (DELPHINUM). NAT. ORD., Ranunculacea.		
	One of the generally cultivated and ornamental genus of plants, combining unu-		
	sual richness with an endless variety of colors, all of which are extremely beautiful		
	and pleasing. The flowers are produced in the greatest profusion; and the plants,		
	in beds, masses, or ribbons, are strikingly effective: indeed, few plants are so gen-		
	erally useful and valuable for their decorative qualities, either in the garden or		
	when cut for vases. The great difficulty has hitherto been the procuring of seeds		
	which would yield double flowers. To this object we have given special attention,		
	and now offer seed saved only from such varieties as are really to be depended		
	upon, and worthy of a place in every garden. For the guidance of amateurs we		
	may simply notice that the stock-flowered Larkspur is of the same habit as the old		
	Dwarf Rocket, but has longer spikes, and much larger and more double flowers;		
	the tall stock-flowered variety is the same style as the branching, but with more compact spikes, and larger and more double flowers. The tall-growing varieties		
	tractioned in abundance hardens are due a charming effect when the land		
	*cattered in shrubbery-lorders produce a charming effect when backed by green foliage of the shrubs. Hardy annuals.

~	NO.		ICE.
\$ B	186	Very showy, profuse-blooming, handsome plants; exceedingly effective when used as a background to other plants. Hardy annuals.	.05
)		A charming tribe of the most beautiful of our hardy annuals. Nearly allied to the Gilia, and requiring the same treatment.	
3		Leptosiphon Androsaceus. Mixed. From California Hybridus. The finest of them all, embracing all the colors from dagger maroon, orange, crimson, violet, golden-yellow, and white. 1 foot	.05
0		Very beautiful, showy, profuse-blooming, dwarf-growing plants; slightly fragrant; particularly effective and valuable as edgings, succeeding in any soil or situation, but delighting most in a moist soil. From California. Hardy annuals.	
	189	Limnanthes. Finest mixed	.10
2	190	A handsome, free-flowering genus of snapdragon-like plants, remarkable for the beauty and variety of their colors; well adapted for and very effective in beds, or ribbons, rock-work, woodland-walks, &c. Succeeding in any soil. Hardy annual. Linaria Mixed. All the finest sorts	.05
Ų		LINDHEIMERIA. NAT. ORD., Compositæ.	
	191	Lindheimeria Texana. A very pretty little plant, having a vanilla-like odor. Yellow; fine. Hardy annual. 2 feet	.10
		A genus of the most beautiful, free-flowering plants, amongst which stands distinguished for its brilliant-colored flowers, Linum Grandiflorum Coccineum, being one of the handsomest, most effective, and showy bedding-plants we have; for, whilst its habit of growth is slender and delicate, it produces a profusion of beautiful, saucer-shaped flowers, of a rich scarlet-crimson, with crimson-black centre. The whole genus deserves general cultivation. Make nice pot-plants.	
		Linum Grandiflorum Coccineum. Scarlet, with crimson centre. 1 foot .	.10
	193 194	— Album. Beautiful white variety. 1 foot	.10
	195	Lewisii. Blue and white stripes. From North America. 2 feet	.10
	196		.10
		A most elegant and useful genus of dwarf plants, of easy culture; well adapted for bedding, edging, pots, or rockeries. Lobelias, in fact, are employed as universally in the general summer-garden as seariet geraniums, to beds of which they form a neat and effective edging. Lobelia Speciosa is the finest of all, from its intense dark-blue color, with a clear white spot, and its dark-colored foliage. The varieties of Lobelia Gracilis are the best adapted for rock-work, pots, or suspended baskets, to droop over. The seeds of Lobelias, being very small, cover very slightly when sown. Half-hardy annuals.	
		Lobelia Compacta. Dark blue, with white centre; compact growth. 1 ft	.16
	198	— Grandiflora. Large-flowered variety; dark blue	.10
	200	Speciosa. The most effective of all the varieties; extremely rich and	
	201	beautiful intense azure-blue flowers; fine for pots. \(\frac{1}{4}\) foot — Paxtoniana. Fine habit, with profuse bloom of pure white, with sky- blue belt; the largest flower in the tribe; a beautiful bedding-plant. \(\frac{1}{4}\) foot.	.10
		Formosa. Beautiful; dark blue. ½ foot	.10
	203	Gracilis. A delicate-growing variety; mixed colors. } foot	.10
		A splendid genus of the most ornamental, beautiful, and free-flowering of garden plants, with long, graceful spikes of bloom: colors rich and varied. Many of the varieties are of stately, robust growth, which makes them exceedingly valuable for mixed flower and shrubbery borders. Hardy annuals.	
>	204	Lupins, Garden. Mixed colors	.05

AMATEUR (CULTIVATOR'S GUIDE.

NO. PRICE	
205 Lupins Affinis. Blue, white, and purple; pretty. From California. 11 ft	Ď,

NEMOPHILA MACULATA.

NOLANA. NAT. ORD., Nolanacea.

Subcerulea. A fine variety, with mauve-colored flowers

A magnificent genus; one of the most useful and beautiful, either for beds, borders, edgings, or rock-work. All the varieties are free-flowering, with superb spikes of large flowers. Half-hardy annuals.

260 Œnothera Acaulis. A large-flowered variety, with silvery-white blossoms . .10
261 — Biennis Hirsutissima. Crimson-orange; from California. 2 feet . . .00

263 — Drummondii Nana Nova. Dwarf; bright yellow; from Texas. 19- ..

OXYURA. NAT. ORD., Compositæ.

264 Oxyura Chrysanthemoides. A showy, free-flowering plant, with beautiful fringed flowers; golden-yellow; from California

AMATEUR (CULTIVATOR'S QUIDE.

40.	CE.
This new Texas plant is one of the finest of recent acquisitions. It is much	2/4
dwarfer and more branching than Palafoxia Texana; and the flowers, which have	7
very much broader florets, are larger, and of a bright rosy-crimson color, with a	To.
dark centre. It is an annual, and will flourish finely in light and dry soils, and	4
blooms throughout the summer.	0=
265 Palafoxia Hookerania. Rosy-crimson, with dark centre	.05
PEAS. NAT. ORD., Leguminosce.	
The Sweet Peas are among the most popular annuals which enrich the flower gar-	1
den. They may be planted and trained on sticks the same as common peas; or	
they may be sowed along the sides of fences, forming a highly ornamental cover-	
ing: in any situation, they are always admired. Hardy annuals.	7

PERILLA. NAT. ORD., Labiatæ.	
Among the recent introductions of ornamental-foliaged plants for flower-garden	
decoration, the Perilla deserves a more than ordinary share of attention. Its habit	
of growth is neat and shrubby, whilst its foliage is a deep mulberry or blackish	
purple, and forms a fine contrast to the silvery longe of Cheraria Maritima, or the	
lively green of other plants. Half-hardy annuals.	
277 Perilla Nankinensis. Leaves, a deep mulberry or purplish-black. 2 feet .	.05
PHLOX DRUMMONDII. NAT. ORD., Polemoniaceæ.	
This magnificent genus of plants is unrivalled for richness and brilliancy of colors,	
profuse and duration of blooming. They are unsurpassed for bedding or pot-cul-	
ture, and produce a splendid effect in mixed borders. No garden should be with-	
out these beautiful plants. Succeeds best in light rich soil. Hardy annuals.

340 Sphenogyne Speciosa. Bright yellow; black centre; from S. Am. 1 foot . .05

MATEUR CULTIVATOR'S GUIDE.

SPRAGUEA. NAT. ORD., Portulacea.

900.

A charming plant, resembling the Calandrina, with Amaranthus-like flowers; extremely graceful and beautiful; very effective as an edging, and valuable for rock-work; delighting in a rich loamy soil. Half-hardy annual.

341 Spraguea Umbellata. White, shaded and spotted with purple; from Cal. # ft. 2

STOCKS. (TEN-WEEKS). NAT. ORD., Cruciferæ.

The Stock Gillyflower is one of the most popular, beautiful, and important of our garden favorites; and whether for bedding, massing, edging, or ribboning, it is unsurpassed, either for brilliancy and diversity of color, or profusion of bloom.

The Ten-week Stock is the most universally cultivated, and usually blooms ten to twelve weeks after being sown. They grow from six to fifteen inches high, and when cultivated in rich soil, and occasionally watered with weak guano-water, throw out an immense quantity of lateral spikes of bloom, so that each plant forms a perfect bouquet; and it would, indeed, be difficult to surpass the grand effect produced in beds or ribbons by these exquisite gems.

342 Stocks, New Large-flowered Pyramidal. The most popular stock in cultivation; very choice; received from one of the most celebrated florists in Ger-

DOUBLE ZINNIA. NO.

FRICE. ZEA. NAT. ORD., Graminece.

One of the most valuable acquisitions. Among ornamental-foliaged plants of rapid growth and immediate effect, the new Striped Japanese Maize holds the most conspicuous place. It is a native of Japan. It appears to be a variety of Mnize, but differs in many respects from our common Indian Corn. It grows from five to six feet high, and has alternate foliage; the foliage is about four feet long, and two or three inches wide. The variegation does not show itself until the fourth or fifth leaf.

362 Zea, or Striped Japanese Maize. .

BIENNIALS AND PERENNIALS FLOWERING FIRST AND SECOND SEASON.

ABRONIA. NAT. ORD., Nyctaginiaca.

This beautiful plant is a native of the Rocky-Mountain country, and can hardly be surpassed for beauty and elegance. It is a hardly perennial of trailing habit, sending up immense numbers of flowers of a pure white color, in clusters resembling the Snowball. It opens its flowers, which possess a delightful fragrance, towards evening. In bloom from June to September.

363 Abronia Fragrans. Pure white .25 ACHILLEA. NAT. ORD., Compositæ.

Belonging to the genus known under the name of Milfoil. Hardy perennial. 364 Achillea Filipendula. Yellow; from Caspian Sea. 5 feet

ACONITUM (Monkshood). Nat. Ord., Ranunculacea. A common border-plant, commonly known as Monkshood, growing freely in any

situation. Hardy perennial; from Europe. 365 A onitum Napellis. Mixed, blue and white.

5	V 1/22/2		8
	NO.	PR	RICE
	ACANTHUS. NAT. ORD., Acanthaceæ.		
	These deserve a place in every collection, from their stately appearance, and degend of their leaves having given the first idea of the capital of the Corinthi order of architecture. They require a good sandy loam. Hardy perennials. 366 Acanthus Mollis. White. From Italy. 3 feet.	he ian	.05
	AGROSTEMMA (Rose Campion). Nat. Ord., Caryophyllaceæ.		
	Are perfectly hardy, very easily raised from seeds, and will well repay the lit care they require. The flowers are produced on long stems, blooming free throughout the season. Hardy perennial. For annual varieties, see Viscaria. 367 Agrostemma. Fine mixed; purple and white	tle	05
		۰	.05
	ALSTREMERIA. Nat. Ord., Amaryllidaceæ. This is a genus of tuberous-rooted plants, with beautiful flowers; requiring be grown in a sheltered position to have them in perfection. Half-hardy perenni 368 Alstremeria Van Houtte. Finest hybrids. 1½ feet		.25
	ALYSSUM. NAT. ORD., Cruciferæ.		
	One of the most useful, free-flowering little plants, either for growing in pots, rock-work, or the open border. Hardy perennials.	on	
	369 Alyssum Argenteum. Yellow, silvery foliage; from Switzerland. 1 foot		.05

CURTIS, COBB & WASHBURN'S

BARTONIA. NAT. ORD., Loasea.

414 Bartonia Nuda. This is a perfect gem. It grows two to three feet high, and is literally covered with its large white flowers, of the most delicate texture, surpassing even the finest lace-work. The flowers are two and a half inches in diameter, and produced in abundance. Hardy perennial.

BELLIS (DOUBLE DAISY). NAT. ORD., Compositæ.

A well-known perennial. Many elegant varieties have been raised by saving the seeds from the handsomest kinds. Admirable plants for making edgings, &c.

415 Bellis Perennis. Extra fine; saved from named flowers.....

BOCCONIA. NAT. ORD., Papaveracea.

416 Bocconia Japonica. This noble plant, recently introduced from Japan, has been an object of unusual admiration. Allied to the fine Bocconia Cordata, it surpasses this in point of beauty, of robust, tree growth, habit of plant, size, shape, coloring of leaves, and showiness of flower-spikes. It is perfectly hardy, requiring no protection in winter: of luxuriant growth, forming a bush five to six feet in height, which is decorated, from the month of August, by beautiful pyramidal spikes of flowers, two to three feet in length. Deeply serrated leaves, in the way of oak-leaves; are large, of an obtuse, cordate form, of a sombre green above, glaucous below

CALLIRHOE. NAT. ORD., Malvacea.

CAMPANULA GRANDIS.

PRICE

PHYGELIA CAPENSIS.

CAMPANULA NAT. ORD., Campanulacea.

The Campanulas are strictly biennial plants by pot-culture, and, without exception, some of the finest of all garden-plants for decoration in conservatory, green

LARGE FLAT WHITE ITALIAN TRIPOLI ONION.

LARGE BLOOD-RED TRIPOLI ONION.

Specimens of these onions were sent us by Messis Carter & Co. of London. England, and were exhibited by us at the Massachusetts Horricultural Society, receiving first-class certificates of merit; they were also exhibited at the New-England fair at Lowell, receiving much attention. Weight of specimens exhibited, from 2 lbs. 6 oz. to 2 lbs. 11 oz. Further description, see page 118.

LUNGREN SQUASH. See Noveltien

MASHBURN'S & OBB

GYPSOPHILA. NAT. ORD., Caryophyllacea. A pretty-free-flowering, elegant little plant, best adapted for rustic rock-work

PRICE

and edging; succeeding in any garden-soil.

509 Gypsophila Paniculata. White, in large panicles. Hardy perennial. 2 feet. .10

510 — Steveni. White; in corymbs; fine for bouquets. Hardy perennial. 2 feet. .10

HONESTY (SATIN-FLOWER). NAT. ORD., Cruciferæ.

511 Honesty (Lunaria Biennis). An old plant, but singularly interesting, from the transparent, silvery-like tissue or coats of the seed-vessels in their dry, matured state, through which the fruit is conspicuously seen, and retaining the same effect for any length of time; well adapted, in a cut state, for grouping with everlasting flowers, &c. Hardy biennial. 2 feet

HUMEA. NAT. ORD., Compositæ.

512 Humea Elegans. One of the most beautiful of all plants for decorations in gardens and pleasure-grounds; in appearance resembling a light, graceful, drooping pyramid of innumerable ruby-red, grass-like florets, rising at first in erect panicles from four to eight feet in height, and gradually assuming its exquisitely beautiful outline of growth. Blooms the second season through the summer and autumn months. Half-hardy biennial .

10

HUNNEMANNIA. NAT. ORD., Papaveracea.

An exceedingly beautiful herbaceous plant, with very pretty tulip-shaped flowers. Grows in a light, rich soil. Half-hardy perennial.

513 Hunnemannia Fumariæfolia. Fine yellow; from Mexico. 2 feet .10

IBERIS TENOREANA.

HOLLYHOCK. NAT. ORD., Malvacea.

The great improvement that has been made in this fine old flower within ' few years has now placed it among the most popular flowers of the day; its stau. growth and magnificent spikes of flowers being among the most attractive objects of the garden. It flowers the second and third year after sowing, and then dies, unless it is kept up by cuttings, or divisions of root. Seeds sown in January will produce plants which will flower the same year. Hardy perennial.

514 Hollyhock, Chinese, Annual. Double; several beautiful colors; mixed. 21 ft. - Mixed (Althea Rosea). Fine varieties. Seventy-five per cent of the plants

may be expected to be double

ľ			PANSY (HEARTSEASE, OR VIOLA TRICOLOR). NAT. ORD., Violaceæ.		
ļ			The Pansy, or Heartsease, is a general favorite and old acquaintance with every		
₽			one who has any thing to do with a flower-garden. It begins to open its modest		
1			out lively flowers as soon as the snow clears off in the spring, and continues to en-		
1			iven the garden till snow comes again. The flowers are in the greatest perfection in May and June; the burning sun of summer is unfavorable for their greatest		
1	ď		n May and June; the burning sun of summer is unfavorable for their greatest beauty, but in autumn they are fine again. The Pansy is properly a biennial, but		
1			can be perpetuated by cuttings or division of the roots. Seeds sown in August, in		
1			the open borders, will come up readily in a few weeks. The seeds should be		
			slightly covered with fine soil, if covered at all, as half the seeds sown rot in the		
I			ground from being covered too deep. They require to be covered during the winer with evergreen boughs or a cold frame.

CULTIVATOR'S CUIDE. GROUP OF PANSIES.

CULTIVATOR'S GUIDE. PRICE RHODODENDRON. NAT. ORD., Ericacea. A well-known and magnificent genus of free-flowering evergreen shrubs; should occupy a place in every garden; thrives best in peaty soil. Hardy shrubs. 595 Rhododendron. Finest mixed varieties, from choice named flowers ROSE CAMPION. NAT. ORD., Caryophyllaceae. The Rose Campions are perfectly hardy, and very easily raised from seed, and will well repay the little care they require. The flowers are produced on long stems, blooming freely throughout the season. Hardy perennial. 596 Rose Campion, Mixed .05 ROSE. NAT. ORD., Rosacea. 597 Rose-Seed. From a large collection of hybrid Perpetual, Tea, Bourbons, &c. . ROCKET (HESPERIS). NAT. ORD., Crucifera. A well-known free-flowering spring plant, very fragrant; growing in any soil. Hardy perennial. From Europe. 598 Rocket, Sweet, Mixed .05 SEDUM (STONE-CROP). NAT. ORD., Crassulacea. A useful and interesting genus of pretty little plants, growing freely on rock or rustic work, also on ornamental mounds, old walls, &c., where, during summer, they expand their brilliant star-shaped flowers in profusion. Hardy perennial. 599 Sedum, Mixed. Choicest varieties .10 SILENE. NAT. ORD., Caryophyllacea. Among the tribe of Silenes will be found some of the brightest ornaments of the flower-garden, either in respect to brilliancy of color, or length of duration in bloom; fine for beds, borders, or ribbons. 600 Silene Schafta. Rosy-lilac; from Russia. Hardy perennial .05 - Saxifraga. Pink. Hardy perennial. 1 foot .10 STOCKS (GERMAN, FRENCH, AND ENGLISH). NAT. ORD., Crucifera. The Intermediate or autumn-flowering varieties, if sown early in spring, will bloom the same autumn. For winter flowering, they should be sown in June. They are also valuable for early spring blooming, for which purpose they should be sown the last of July or in August, and kept from hard frost during winter. Plants treated in this way, and planted out in beds in May, make a rich display. The Emperor, or perpetual-flowering. This magnificent class of Stocks may be treated in the same manner as the Intermediate. They frequently last several years if protected from frost; hence its name, - Perpetual. The Brompton and Giant Cape are generally called Winter Stocks on account of their not flowering the first year. The former is robust and branching. The latter possesses the characteristics so much esteemed; viz., immense pyramidal spikes. 602 Stock, Intermediate, or Autumn-flowering. (Twelve distinct colors mixed.) 603 - Perpetual, or Emperor. Finest mixed .10 - New Large-flowering. Finest mixed; superb .25 604 -- Hybrid Giant Cape, or Cocardeau Stocks. Finest mixed. .25 605 -606 - Brompton, or Winter. Finest mixed .10 New Large and Early-flowering. The habit of which is 607 extremely robust: foliage of a most striking green, by which the lively colors produce the greatest effect; mixed . .25 (For splendid assortments of Stocks, see Collections.) SWEET WILLIAM. NAT. ORD., Caryophyllacea. A useful and well-known tribe of plants, perfectly hardy, and easily raised from seed; a bed of fine varieties presenting a rich sight. It sports into endless varieties. which we can confidently recommend as superior to any thing ever before offered in this country. Hardy perennials. 608 Sweet William. Fine Mixed Double-flowering. Auricula-flowered. One of the most desirable, differing from other varieties only in the markings of the flowers, which resemble the Auricula 610 -Hunt's Perfection. Saved from Bragg's finest strain in cultivation;

has taken the first prize at all the London exhibitions the past season; truly gor-

geous in size, color, and variety.

COBB &

LOPHOSPERMUM. NAT. ORD., Scrophulariacea.	
An elegant and highly ornamental genus of climbers, with handsome and showy	
foxglove-like flowers; very effective for conservatory, greenhouse, or garden deco-	
ration, and may be used with advantage for hanging-baskets; will bloom the first	
season from seed. Half-hardy perennial. 75

LOPHOSPERMUM SCANDENS.

MAURANDYA BARCLAYANA.

#### MAURANDYA. NAT. ORD., Scrophulariaceæ.

The most graceful and free-flowering of soft-wooded climbers, whether for the ornamentation of the conservatory and greenhouse, or for pillars, trellis-work, and verandas in the flower-garden. The effect produced by the profusion of elegant and varied-colored flowers is strikingly beautiful. Blooms the first season from seed. Half-hardy perennial.

831 Maurandya Barciayana. Rich violet.	. 10 leet				.10

MORNING GLORY. N	NAT. ORD.,	Convolv	ulaceæ.		

### MOMORDICA. NAT. ORD., Cucurbitacea.

837 Morning Glory, Mixed. The finest varieties. 20 feet

The Squirting Cucumber; an annual gourd-like plant, with woolly leaves and golden-yellow flowers, the fruit of which resembles a small cucumber, and, when ripe, bursts the moment it is touched, scattering its seeds, and the half-liquid pulpy matter in which they are contained, to a considerable distance. Half-hardy annual.

838 Momordica	Balsamina	(Balsam	Apple).	From	East Indies.	10 feet		.05
839 Charant	i (Balsam	Pear).	From East	Indies	. 10 feet			.05

#### PASSION-FLOWER. NAT. ORD., Passifloracea.

A splendid class of climbers, with curious flowers produced in great profusic..; fine for conservatory, or will answer for the garden; flowering freely during the autumn.

BRIZA (QUAKING-GRASS). NAT. ORD., Graminea.

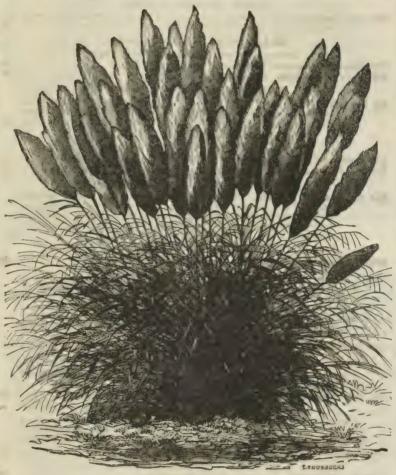

.15

## AMATEUR CULTIVATOR'S GUIDE.

BRYZOPYRUM. NAT. ORD., Graminea.

A very pretty dwarf variety of the ornamental grasses; good for dried bouquets.

874 Bryzopyrum Siculum. Distinct and beautiful; hardy annual. From N. Ame. 05

GYNERIUM (PAMPAS GRASS).

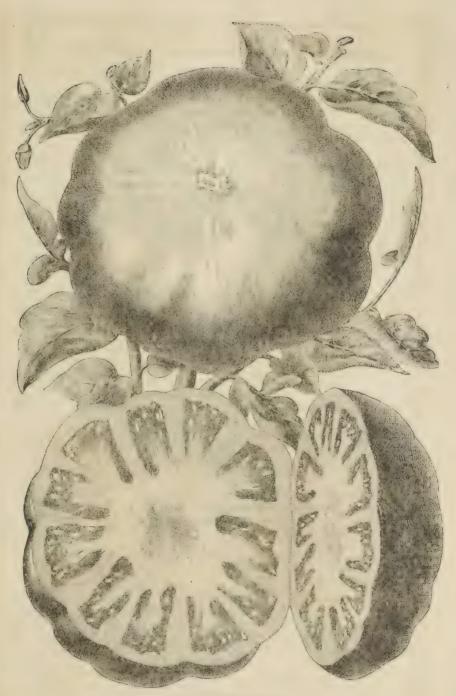

BROMUS. NAT ORD., Graminea.

875 Bromus Bryzoporoides. A very pretty variety of ornamental grass. Hardy annual .

CHLORIS. NAT. ORD., Graminea.

Singularly elegant perennial grass, nine to twelve inches in height, with flower-scapes or stems, having slender flower-spikes or rachis radiating horizontally from

CURTIS, COBB & WASHBURN'S	F SE
nc. the extremides of each scape like the concentric spokes of a wheel. Half-hard	PRICE.
annual.  876 Chloris Radiata. From East India. 1 foot	10
CHRYSURUS. NAT. OBD., Graminea.	
Very pretty ornamental grass, suitable for dried bouquets. Hardy annual.  877 Chrysurus Aureus. From Levant. ½ foot	05
COIX. NAT. ORD., Gramineæ.	
878 Coix Lachryma (Job's Tears). A very curious ornamental grass, having seed which have the appearance of large tears; from East Indies	05
ERAGROSTIS. NAT. ORD., Gramineæ.	
Ornamental grasses; suitable for winter bouquets.  879 Eragrostis Elegans (Love-grass). From South of Europe  880 — Cylindrifolia. From China	05
ERIANTHUS. NAT. ORD., Graminea.	
881 Erianthus Ravennæ. This is a bold-looking, reed-like grass, from four to six feet high, with a fine foliage, resembling much in appearance the Pampa grass; rare. Half-hardy perennial; from south of Europe.	s10
ELEUSINE. NAT. ORD., Graminea.	
Ornamental grasses; light and graceful.  882 Eleusine Coracana. From East Indies	10
883 — Indicum. From East Indies	10
GYNERIUM (PAMPAS GRASS). NAT. ORD., Graminea.	
884 Gynerium Argenteum. This is, without exception, the most stately growing species of grass known. In stature it rivals the Bamboo, attaining, in it native plains (South America), from ten to fifteen feet in height. In northern latitudes, it should be protected in winter by removing to the cellar or cold frame. Half-hardy perennial See cut p. 9.	n
HORDEUM. NAT. ORD., Graminea.	
885 Hordeum Jubatum. A fine new ornamental grass	10
IMPERIATA. NAT. ORD., Graminea.	
A magnificent, hardy grass, quite recently introduced from Amoor, with grace ful curved foliage, forming a fine bush about three feet high, throwing out numer ous flower-spikes about five feet in height, bearing glittering silvery plumes of flowers; extremely pretty. The leaves are lively green, with a broad, silvery line down the middle; and the habit and bearing of the plant are quite as handsome convenient.	f B
as Gynerium.  886 Imperiata Sacchariflora	15
OATS (AVENA SENSITIVA). NAT. ORD., Graminess.	
A very curious genus of ornamental grasses; fine for dried bouquets; suitable for mixed borders. Hardy annual.  887 Oats Animated. Curious. 2 feet	05
	00
Extremely neat, moss-like plants, of a beautiful, lively green, largely used as a substitute for grass on lawns, which they quickly cover, and require no further at tention than rolling and keeping free from weeds; found to thrive best on stiff soil.	•
888 Spergula Pilifera. From Corsica.   foot	10
STIPA. NAT. ORD., Gramines.  889 Stipa Gigantea. Fine ornamental grass	10

Tomato - The Conqueror.

HUNDREDFOLD, OR THE COOK'S FAVORITE PEA.
A grand exhibition pea. See page 119.

# SPLENDID ASSORTMENTS OF FRENCH AND GERMAN FLOWER-SEEDS.

We invite the attention of our numerous customers to the following list of assortments of flower-seeds. They have all been selected expressly for us, by our special correspondents in France and Germany, from the various noted flower-seed growers, whose well-known reputation is a sure guaranty of their superior excellence, both as regards distinctness of color and freshness of seed. We have no hesitation in recommending them as equal, if not superior, to any to be obtained in Europe.

## AMATEUR CULTIVATOR'S GUIDE

### TO THE KITCHEN GARDEN.

"Great care is used to supply every article true to name and of good quality, but nothing is warranted."

N again presenting our Catalogue of VEGETABLE SEEDS, we embrace the opportunity to add that our stock, as heretofore, has been selected with a view to secure only the freshest and most reliable seeds. Most of the staple seeds are raised expressly for us by experienced growers; and such as are imported are purchased from the most reliable seedsmen in Europe, with whom we have long dealt, and from whom we have received only such as we could with perfect confidence recommend. It is our invariable rule to test all our seeds ourselves, and never to send out anything but what we are certain will vegetate freely, and prove true to name. Nothing causes greater disappoint-

ment than poor seeds; for not only is the season lost if they fail to grow, but an inferior crop will not pay for the trouble of planting. American-grown seeds always have our preference; but some kinds it is impossible to obtain in sufficient quantity to fill our orders, and those are obtained only from reliable dealers abroad.

Our prices are affixed by the ounce, quart, and packet; but no quantity is sold less than the ounce or quart at these prices: when less is ordered, they will be supplied in packets at that rate. All the kinds can be supplied by the pound or bushel at the lowest market rate for prime seeds.

Prices of seeds vary, to some extent, from the time of harvesting to the time of planting, and we do not feel bound by these prices unless orders are sent in early. We can only advise our customers to give their orders in good seeson to assure the most favorable terms.

#### ARTICHOKE (CYNARA SCOLYMUS).

German, Artischoke. - French, Artichaut. - Spanish, Alcaci, fa.

The Artichoke is a native of the south of Europe, and is principally cultivated in the gardens of the French by whom it is considered more as a luxury than as a profitable esculent. The heads, in their immature state, and before their blue thistle-like flowers open, are cut, and boiled in salt and water. The edible part is merely the fleshy substance on the bottom of the scales, which, to make palatable, has to be dipped in a nicely prepared sauce of butter and spices. They are frequently eaten as salad in a raw state.

Culture. — The Artichoke may be grown from seed or offset suckers, separated early in spring. The best way to obtain a supply from seed is to sow the seeds in April in a bed of good rich earth, or it may be planted in drills one inch deep, and about twelve inches apart. It should be transplanted the following spring to a permanent place. Either in beds or drills, plants should stand two feet apart each way, requiring a deep, rich, moist loam; also should be protected with leaves or straw during winter.

Large Globe. A very large sort, most generally cultivated. Heads or buds very large, nearly round, and with a dusky-purplish tint. Per packet, 10

Green, or Common. Heads large, of a conical form; scales deep green, thick, and fleshy; pointed at the tips, and turned outwards. Per packet, 10

.50

### ASPARAGUS (ASPARAGUS OFFICINALIS).

German, Spargel. - French, Asperge. - Spanish, Esparrago.

This universal vegetable is supposed to be a native of Great Britain, where it is found on the banks of sandy soil contiguous to the sea, growing luxuriantly under the sait breezes.

There are, it is said, several varieties of Asparagus; but the difference mainly arises from the nature of the soil.

Culture. — Sow the seed early in spring, one inch deep, and three or four inches apart, in rows one foot apart. When two years old, they may be transplanted into permanent beds, the plants placed a foot apart in each direction, and at least four inches hereath the surface.

Inches beneath the surface.

To make it "Giant," be particular to select for the bed warm rich soil. Trench it at least eighteen inches deep, working in six inches or more depth of well-rotted manure. Every fall cover the bed with manure, and in spring dig it in lightly, care being taken not to disturb the roots.

Conover's Colossal. A European variety, introduced several years since, which, by a careful selection of seeds from the most vigorous shoots, has been wonderfully improved both in size and quality, in point of which it surpasses all other varieties in cultivation. Per pkt., 5

ENGLISH BEAN (FABA VULGARIS).

German, Gartenbohne. — French, Féve de Marais. — Spanish, Haba.

The following varieties are much grown in England, but find little favor in this country.

Culture. — Sow as early as the ground will admit, in rows two feet apart, and three inches apart in the rows. They will come sooner into bearing if the tops of the plants are pinched off as soon as they are in full bloom. Succeed best in a deep, strong, loamy soil.

Broad Windsor. This familiar sort is much esteemed and extensively cultivated, remaining fit for use longer than any other variety. A sure bearer

BEANS, Bush (Phaseolus Vulgaris). German, Bohne. — French, Haricot. — Spanish, Frijolenano.

The plants of this class vary from a foot to two feet in height. They require no stake or pole for their support.

By Mail, 15 cents a pint extra. per qt

Early Yellow Six Weeks. Excellent for string or shell; one of the earliest.

Early Feejee. Much esteemed for an early string bean; very productive. . .25

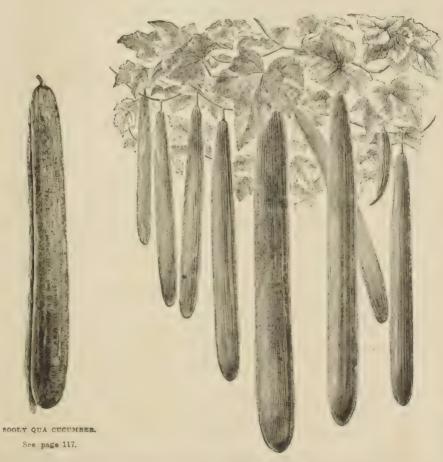

ASPARAGUS. CONOVER'S COLCESAL.

All Beans, 10 cents per pkt.

20	0	BEANS, POLE (PHASEOLUS VULGARIS).  German, Stanger Bohne. — French, Haricots a rames. — Spanish, Judias.  As a class, these are less hardy than the dwarfs, and are not usually planted so early the season. The common practice is to plant in hills three feet or three and a half ap with a stake or pole to run upon. By Mail, 15 cents a pint extra.	art,
The state of the s		London Horticultural, or Speckled Cranberry. May be used as a snap, or, when more advanced, shelled, as the Lima; very productive.  Red Cranberry. This is one of the oldest and most familiar of garden beans; excellent as a string or snap bean.  White Case Knife. Most prolific of the running varieties. As a shelled bean, it is of excellent quality in its green state, and, when ripe, farinaceous and well-flavored	.40 .40
1		Indian Chief, or Wax. One of the best varieties either for snaps or shelled; remarkable for its fine, tender, and richly-colored pods; very productive.  Giant Wax. Recently introduced, and differing essentially from the old German Wax Bean, being of a more robust growth and more productive. The pods are from six to nine inches in length, and from three-fourths to one inch in breadth; the beans, when ripe, are of a reddish color. The pods, when fit for use, are of a clear, waxy color, perfectly stringless, and, when	.40
		cooked, are as tender as marrow, and truly delicious. Per pkt., 16  BEANS, RUNNERS (PHASEOLUS MULTIFLORUS).  German, Grosse Bunte Bohne. — French, Haricot d'Espagne. — Spanish, Judia Vastago d' pana.	.50 Es-
		Scarlet Runner. A very prolific variety; fine for covering arbors, trained over pales, up the walls of cottages, which they enliven by the brightness of their blossoms, at the same time yielding a supply of wholesome and nutricious food  White Runners. A variety of the Scarlet Runner. As a shell-bean, either green or white, they are considered superior to the scarlet, and often seen in our	.50
		markets under the name of Lima  Painted Lady. A sub-variety of the Scarlet Runner, with variegated flowers; the upper petals being scarlet, the lower white  Carter's Champion Runner. A gigantic variety of Scarlet Runners, having pods nearly double the size of the old variety; it is more robust in growth, and	.60
		is an extraordinary cropper. Per pkt., 25.  BEANS, LIMA (PHASEOLES LUNATUS).  German, Bohne von Lima. — French, Haricot de Lima. — Spanish, Haba Vastago de Limper	a.
7	/	<ul> <li>Large Lima. This is one of the latest, as well as the most tender, of all garden beans; the best time for planting being from the first to the middle of May. In planting, be sure to place the eye downwards.</li> <li>Small Lima, Carolina, Sewee, Sieva, or Saba. This is one of the most productive of all varieties. The beans, in their green or ripe state, are similar to the Lima, and are nearly as delicate and rich flavored. It is from</li> </ul>	.40
9	}	BEET (BETA VULGARIS).  German, Runkle Rube. — French, Betterave. — Spanish, Bettarage.	.40
1	2	Culture.— For early use, sowings are sometimes made in November; but the gene practice is to sow the seed in April, as soon as the frost is out of the ground, or as soon the soil can be worked. For use in autumn, the seed should be sown about the middle	1 119

twentieth of May; and for the winter supply, from the first to the middle of June. Lay out the ground in beds five or six feet in width, and of a length proportionate to the supply required spade or fork the soil deeply and thoroughly over; rake the surface smooth and even; and draw the drills across the beds fourteen inches apart, and about an inch and a half in depth. Sow the seeds thickly enough to secure a plant for every two or three inches, and cover to the depth of the drills. When they are two inches in height, they should be thinned to five or six inches apart.

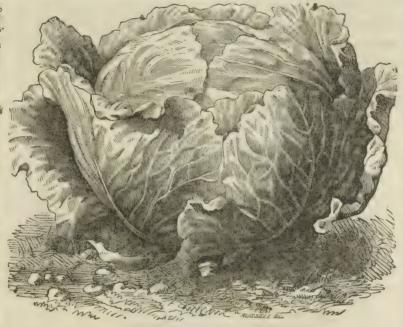

EGYPTIAN BEET (one-third natural size).

	02.
Egyptian Turnip. This new variety was sent us for trial last season, and proved	
one of the finest. Very dark, early, good form, and fine flavor. One of	
the very best. Per pkt., .5	.10
Early Flat Bassano. An Italian variety; seven to ten days earlier than the Early	
Turnip. Flesh white, circled or zoned with bright pink; very tender	40
and juicy; not suited for winter use unless sown quite late. Per pkt., .5	.10
Simon's Early. An improvement on other early kinds; and is now superseding	
the Bassano, being quite as early, and of a blood-red color; smooth and	12
turnip-shaped. Most valuable variety for the market. Per pkt., 5	.15
Early Turnip Blood. One of the best for general use. Flesh deep blood-red,	40
sometimes circled and rayed with paler red: sweet and tender. Per pkt., 5	.10
Early Yellow Turnip, or Orange. A sub-variety of the Blood Turnip, differing	
in color. Flesh yellow, close-grained, sweet, and tender. Per pkt., 5 .	.15
Long Smooth Dark Blood. An improved variety of the Long Blood. Flesh	
sweet, tender, and fine grained; fine winter beet if sown late. Per pkt., .5	.10
Henderson's Pineapple. Short top, medium size. Flesh very deep blood-red, fine	
grained, sweet, tender, and of excellent quality. Per pkt., 10	.15
White Sugar. A large variety, grown extensively for feeding stock, although the	
young roots are tender, sweet, and well flavored. Per pkt., .5.	.10
Long-Red Mangel Wurzel. A large variety, grown principally for feeding stock.	
When young, is sometimes used for the table. Flesh white, zoned and	<b>40</b>
clouded with different shades of red; is hardy, and keeps well. Per pkt., .5	.10
Yehow Globe. Large, round, orange-colored variety; keeps better than the Long	70
Red, and produces better crops on shallow ground. Per pkt., .5	.10
Carter's Champion Mangel. This improved variety of Orange Globe is superior	10
to any other sort, and produces a greater weight per acre. Per lb., .75.	.10
(B) (89	1

## AMATEUR GULTIVATOR'S GUIDE.

9 N 2 2	
	02
White Cape. Later than the preceding; should be planted early in April. The heads,	
when perfected, are large and white, and compact. Per pkt., 10	75
Charpell's Large Cream Colored. A very large and fine sort; flower cream-yellow;	
very early. Per pkt., 10	.60
Snow's Superb White Winter. A dwarf variety. The leaves are broad, with short	
stems; the heads are large, white, very compact. Per pkt, 10	.75
Carter's Champion. Dwarf, compact-growing, large-headed; the best late variety	
in cultivation. Per pkt., 10	.50
Carter's Summer. A new variety, with enormous, close, white heads, coming be-	
tween the late Broccoli and the Cauliflower. Per pkt., 10	.50

### EARLY SCHWEINFURTH CABBAGE.

### CABBAGE (BRASSICA OLERACEA CAPITATA).

German, Kopfkohl. - French, Chou Pomme. - Spanish, Repollo.

One of the most popular vegetables grown.

Culture. - The Cabbage can be cultivated by the most simple and easy means. It grows in most soils, and produces its beneficial heads nine months in the year. The ground must be rich, or made so by a good coat of manure, as they have strong, tapering roots. Digging or ploughing deep is very essential. For early us 2, sow in hotheds in February or March; and for winter, the seeds may be sown in the open and in May or June. When five or six inches high, transplant to from twelve to thirty inches apart.

Wintering Cabbages. - If you have not a dry, airy, vegetable cellar nor open shed to spare for burying them, take a sheltered part of the garden, and bury the roots, stalks, and part of the head, in the earth; over which, in severe weather, place a good sprinkling of

straw, and a few boards. In southern latitudes, this is unnecessary.

Early Wyman. The best and most profitable early market-cabbage grown. It heads early, is of large size and first quality, and brings the highest price of any early cabbage brought into the Boston market, selling readily last season by the thousand, at \$18 per hundred. It took the first prize at the last and several previous exhibitions of the Mass. Hort. Soc. Per pkt., 10.

### OBB & WASHBURN'S EVRTIS,

	CA.
Pe	roz
Early Schweinfurth. A remarkable and valuable variety, both for earliness and	
large size; adapted chiefly for summer and autumn use. Per pkt., 10 .	30
Early York. As an early market sort, one of the most popular. The head is of	.00
rather less than medium size, roundish-ovoid, close and well-formed; ten-	
der and well-flavored. Per pkt., 5	.20
Early Wakefield. (Jersey) similar in form to the Early York, and nearly as early;	
grows to a good size; a favorite with market-gardeners. Per pkt., 10.	.51
Early Drumhead, or Battersea. This is a round flat-headed variety, of excellent	
quality; one of the latest among the early sorts. Per pkt., 10	.20
1 ,	
Early Queen. Very fine; medium size; quite early. Per pkt., 5	.30
Green Glazed. Heads large, rather loose. Its texture is coarse and hard; less liable	
to the attacks of the cabbage-worm than other sorts. Per pkt., 10	.30
Large York. A larger variety than the Early York, which it somewhat resembles.	
The head is broader, and more firm and solid. Per pkt., 5	.20
,	
Large Late Drumhead. Heads large; round, sometimes flattened a little at the top;	
close and firm; very hardy, and keeps well for a winter cabbage. Per pkt, 10	.30
Large French Oxheart. A variety which is taking the place of many others. It is	
tender, forms its heads readily, and well-flavored. Per pkt., 10	.30
Little Pixie. A comparatively new variety; makes a small delicate-flavored head;	
one of the very earliest and best. Per pkt., 10	.30
Stone Mason Drumhead. Originated by Mr. Mason, of Marblehead, Mass. It is	
characterized for its sweetness and for its reliablity for forming a solid	
head. It is also an excellent variety for northern latitudes. Per pkt., 10	.40
2	

MARBLEHEAD MAMMOTH DRUMHEAD CABBAGE.	
Marblehead Mammoth Drumhead. The largest Cabbage in the world.	
This (the Mammoth) is, without doubt, the largest variety of the Cab-	
bage family in the world, being the result of the extreme of high culture.	
In form this variety differs, the head being sometimes nearly hemispheri-	
cal, at other times nearly flat. Under high culture it is compact and hard.	
Its size is indeed mammoth, ranging from that of a half-bushel measure up	
to that of a two-bushel basket, and even larger. They have been grown,	
and, when stripped of all waste leaves, could not be got into a two-bushel basket. Per pkt., 10	.40
Foltler's Improved Brunswick. The Earliest, Shortest-stemmed, and very best Drum-	
head yet offered. The Boston market-gardeners all use it in preference to	
any other. Every plant produces a good head, - when fully grown	
weighing from twenty to thirty pounds, - and requiring only ordinary	
cultivation. The quality is excellent. Per pkt., 10	-40

Premium Flat Dutch. A low-growing variety; heads large, bluish-green, round, solid, broad and flat on the top, and often tinted with red and brown. As a winter variety, it has no superior. Per pkt., 10

Red Dutch, or Pickling. This sort is used mostly for pickling, and often cut in shreds and served as a salad; medium size, oblong shape, and very solid; of a deep red or purple color. Per pkt., 10

.80

### AMATEUR (CULTIVATOR'S GUIDE.

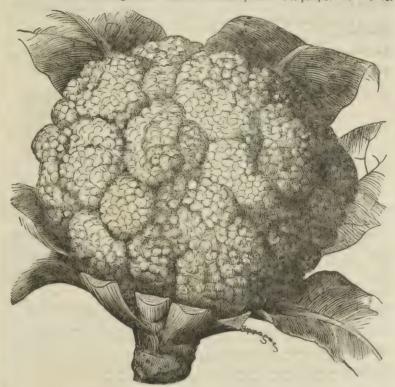

Winnigstadt. This is a German variety, somewhat similar to the Oxheart, I		Per
regular; conical; heads very full and solid. All things considere	d. this	is
one of the best for general cultivation. Per pkt., 10		

### SAVOY.

Drumhead Savoy. Head large, round, compact, vellowish at the centre, and a lit	t16
flattened; excellent for winter. Per pkt., 5	2
Green Globe, or Curled Savoy. One of the best and most familiar of the Savoy	78;
medium size, very tender Parakt 10	, 0

Feather-Stem Savoy. A hybrid, possessing the growth and habit of Brussels Sprouts.

A delicious vegetable. Treat as Brussels Sprouts. Per pkt., 10

THE BOSTON-MARKET OR IMPROVED EARLY PARIS CAULIFLOWER.
(Used, by permission, from The American Journal of Horticulture.)

CAULIFLOWER (BRASSICA OLERACEA BOTRYTIS).

German, Blumen Kohl. - French, Choufleur. - Spanish, Coliflor.

This very delicate vegetable was first introduced into England from the Island of Cypress, and is classed among the most delicious of vegetables.

Culture. — The proper seasons for sowing seeds are, for the early spring or summer crop, between the eighth and twentieth of September; and for the late autumn crop, about the first of April. The plants, as soon as they are two or three inches high, should be planted out in a bed of rich light earth, three inches apart each way, so as to grow firm and stocky, to remove to their final place of growth. For the purpose of growing them to perfection, use a bed of the richest light earth, two feet deep, made very rich, with well-decom-

9:

Lemaitre. A fine variety; producing a large, firm head, very white, and of superior quality; much esteemed by the Paris gardeners. Per pkt., .25.

Boston Market. This is one of the finest varieties of this delicious vegetable grown, and is very popular with the market-gardeners about Boston, who find it particularly suited to this climate. It has been brought to its present state of perfection by a careful system of cultivation, and selection of specimens from which to grow seed. It is very early; produces uniformly large and fine solid flowers, or heads, of snowy whiteness and excellent flavor. Weight of specimens, seven and a half pounds; diameter, ten and a half inches; circumference, thirty-one inches; length of foliage, twenty-nine and a half inches. Per pkt., .25. (See cut.)

### CARROT (DAUCUS CAROTA).

German, Mohre. - French, Carotte. - Spanish, Zanahoria.

The Carrot in its cultivated state is a half-hardy biennial. It is generally served at table boiled with meats; it also makes an excellent ingredient for soups. As an agricultural root, it is not surpassed for feeding cattle.

Culture. The Carrot flourishes best in a good, light, well-enriched loam. If possible, the ground should be stirred to the depth of twelve to fifteen inches, incorporated with a liberal application of well-rotted compost, and well pulverizing the soil in the operation. The surface should next be levelled, cleared as much as possible of stones and hard lumps of earth, and made mellow and frisole; in which state, if the ground contains a sufficient moisture to color the surface when stirred, it will be ready for the seed. This may be sown from the first of April to the twentieth of May.

Orange Intermediate. Size medium; skin bright orange-red; flesh orange-yellow; well flavored, and, while young, excellent for the table. Per pkt., .5 . .15
Improved Long Orange. A well-known standard sort. Roots long, thickest at or

Improved White Green-top Orthe. An improved variety of the White Belgian, with shorter and much larger roots; perfectly smooth, cylindrical, and tapering to a rather blunt point. It is easily pulled out, and yields very large crops. Per pkt., .5

### CELERY (APIUM GRAVEOLENS).

German, Seleri. - French, Celeri. - Spanish, Apio.

Celery is one of the most popular salads used in this country.

Culture. — The seed should be sown in hotbeds in March, or in the open ground the last of April or first of May; but, when sown in the open ground, it vegetates very slowly, often remaining in the ground several weeks before it comes up. A bushel or two of stable manure put in a hole in the ground, against a wall or any fence facing south, and covered with a rich fine mould three or four inches deep, will bring the seed up much sooner. Suf-

9

ficient plants for any family may be started in a large flower-pot or two, placed in a sitting-room, giving them plenty of air and moisture. As soon as the young plants are about three inches high, prepare a small bed in the open ground, and make it rich and the earth fine. Here set out the plants for a temporary growth, placing them four inches apart. This should be done carefully; and they should be gently watered once, and protected for a day or two against the sun. Make the trenches a foot or fifteen inches deep, and a foot wide, and not less than five feet apart. At the bottom of the trench put some good, rich, but well-digested compost manure; for if too fresh, the celery will be rank and pipy, or hollow, and will not keep nearly as long or well. Dig this manure in well, making the earth fine and light; then take up the plants from the temporary bed, and set them 'ut carefully in the bottom of the trenches, six or eight inches apart.

Blanching. — When the plants begin to grow, hoe on each side and between them with a small hoe. As they grow up, earth their stems; that is, put the earth up against the stems, but not too much at a time, and always when the plants are dry. Be particular and not allow the soil to get between the stems of the outside leaves and the inner one, as it is injurious to the plants. In frosty weather, they should be protected by covering the tops of the trenches well with dry litter; this should not be allowed to remain longer than is absolutely necessary: it is well to cover the whole with boards to shed the rain.

per	OZ.
Boston Market. A favorite variety in the Boston market; remarkable for its ten-	
der, crisp, and succulent stems, and its peculiarly mild flavor. It is exten	
sively cultivated by the market-gardeners around Boston, and surpasses	
any other variety for its great excellence. Per pkt., 10	4.0
	.41)
White Solid. Large, strong-growing variety; clear white, solid, and crisp. One of	
the best for market or general use. Per pkt., 5	.25
Hood's Dwarf Imperial. A stout-growing, very compact, solid, and hardy variety,	
of superior flavor and distinct habit. Per pkt., 10	40
	.30
Sealey's Leviathan Celery. A very large, solid, white variety; highly recommend-	
ed. Per pkt., 10	.85
Laing's Improved Mammoth Red. Considered the largest variety yet produced;	
specimens under good cultivation having attained the extraordinary	
weight of eight to ten pounds, and, at the same time, perfectly solid;	
bright red; flavor unsurpassed. Per pkt., 10	0.5
	.35
Turner's Incomparable. Dwarf white, of stiff, close habit; solid, crisp and juicy.	
Keeps in good order later in the season than any other. Per pkt., 10	.30
Carter's Incomparable Dwarf Crimson. A new variety, highly recommended;	
dwarf habit; solid; of a deep crimson color. Per pkt., 10.	.80

Colory Scotte and mandring Soups, sec. A et 10., \$1.00	. 10

### CHERVIL (SCANDIX CERIFOLIUM).

### German, Gartenkerbel. - French, Cerfeuil.

Is a warm, mild, and aromatic plant. A native of Europe, and, in olden times, of great repute. After being boiled, it was eaten with oil and vinegar, and considered a panacea for courage, comfort to the heart, and strength to the body. It is much cultivated by the French and Dutch, who use the tender leaves in soups and salads as we use Parsley, and is considered by many to be a milder and more agreeable ingredient.

Culture. Chervil is an annual plant, and should be sown in March, April, and May, in drills about a quarter of an inch deep, and nine inches apart. Cover lightly, and press the soil firm with the foot; rake evenly, and give a gentle watering in dry weather. The leaves are fit for use when two to four inches inches high. Cut them off close; they will come up again, and may be gathered in succession throughout the season.

again, and	may be gathered	in succession	throughout the season.

### CORN, INDIAN (ZEA MAIS).

German, Welsch	corn. — French,	Mais Spanish,	Maiz.	per qt.
----------------	-----------------	---------------	-------	---------

Adams's Early. Much grown for early use and the market; very early. Per pkt., 10
Crosby's Early Twelve-Rowed. The earliest variety of twelve-rowed sweet corn
brought into Boston market, full kernelled, sweet, and delicious. Received the premium of the Massachusetts Horticultural Society, as the

best early corn. Cultivated almost exclusively by Boston market-gardeners .2:

Parling's Extra Early Sugar is early, very tender, and sugary; yields well, produces little fodder, ears near the ground; the best for early use. Per pkt., 10

95

## Curtis, Cobb & Mashburn's

1		7	-
3		-0	8
8	Moore's Early Concord Sweet. Stalks strong, stocky and vigorous, growing from seven to seven and a half feet high. Ears large, and set rather close on the stalk, and having from twelve to twenty rows on the ear. Color, when fit for the table, very white and handsome; a superior		100
) is	variety, either for the market or family use, and very productive; it matures earlier than any other variety of equal size, which makes it very desirable for the market garden. The Massachusetts Horticultural Society awarded Mr. Moore the Society's silver medal for the production of this superior variety. Select ears, 15 cents; per pkt., 10 cents	.25	
2000	Potter's Excelsior Sweet. This variety was originated at the Rhode Island Seed Gardens in East Providence, and in many respects is unequalled by any variety now in cultivation for sweetness and delicious quality or an early variety. Size, medium; equal to any for earliness; and a better corn for family use, to be grown in small areas of a kitchen garden, can hardly be desired. Per pkt., 10 cents	.50	
3	Dolly Dutton. New. A very dwarf, early growing sort, stalks from three to four feet high. Ears small, averaging from four to five inches in length; kernels of good size, tender, very sweet, and delicious. Per pkt., 25 cents; selected ears, 15 cents each.		
B	Washington Market. New. This is, without exception, the best of the large varieties of sweet Corn, and when better known, will, we are confident, become a standard variety for general cultivation. It is highly recommended for canning purposes. Select ears, 30 cents each; per pkt., 25 cents.		
	Sweet Fodder Corn. Sweet Corn is generally prefered to the yellow kinds; being more succulent, tender, and quicker growth. Per peck, \$1.00.	.20 r qt.	
	<b>Red Cob Sweet.</b> Medium; early; usually twelve, but sometimes fourteen rowed;		
	quality good; cob red; kernels large. Per pkt., 10.  Burr's Improved Sweet. An improved variety of the twelve-rowed Sweet. The ears are from twelve to sixteen rowed, and, in good soils and seasons,	.25	
	often measure eight or ten inches in length, and nearly three inches in diameter; cob white; hardy, productive, tender, and sweet; the best for general use. Per pkt., 10	.25	
	Mammoth Sweet. A very large and late variety; cob white; fine flavored; one of the best. Per pkt., 10	.25	
	Stowell's Evergreen Sweet. This variety is intermediate in its season, and, if planted at the same time with the earlier kinds, will keep the table supplied till October. It is hardy and productive, very tender and sugary,	05	
	remaining a long time in a fresh condition. Per pkt., 10.  Early Narragansett. The earliest of the sweet varieties. Comes to table in seventy-five days; ears of the best table size, with eight regular rows; delightfully tender, sweet, and of excellent quality. Per pkt. 10	.25	
1	cents	.25	
	Nonpareil, or Pop-corn. A fine parching variety. Per pkt., 10	.50	
	Rice. Hardy and prolific; good for parching. Per pkt., 10  King Philip, or Brown. Very productive, and is recommended as one of the best field sorts now in cultivation	.25	
	Early Dutton, or Golden Sioux. One of the handsomest of the field varieties; productive, and of good quality .	.80	
		r oz.	
Y	German, Lammersalat. — French, Mache. — Spanish, Canonigos.  An annual plant, cultivated for its tender leaves, which are esteemed as a winter and early spring salad. The seed is sown in shallow drills, early in Sept.

feeding poultry; also used for soaps. Per pkt., 5.  Water. This is an aquatic plant, with smell oval leaves, and	.10	
leaves are universally used and eaten as an early spring salad. Per pkt. 10  CUCUMBER (Cucumis Sativus).	.50	-
German, Gurke. — French, Concombre. — Spanish, Cohombro.		
Culture, in the open air, is of the simplest character. Merely dig out a hole about a wide and deep; fill it with rich sandy soil; raise it above the surface about six in The hills should be six feet apart each way. If the weather be warm, they will grow few days. If the nights are cold, protect them. There is frequently a little bug w preys upon the tender leaves: if so, soot and wood-ashes, sprinkled over them while with the dew, will retard the progress of the depredator. To have young fruit in Febr and March is rather a nice operation; but any one who can command a few loads of w horse-manure can have them from April to October. That the amateur cultivator may the article either for family use or for sale, a few hints may be in place on forcing cut bers. Prepare a frame, following the instructions laid down in the first part of this of for hotbeds. After the beds are in order, put in a good quantity of good, light, rich loan none better than the surface of the woods. In two or three days, the earth will be ciently warm for sowing the seeds. If the plants are to be removed into other frames, them in pots; if not to be removed, sow them in a hill made in the centre of the be placing a barrowful of soil in it. Cover the sash at night with straw mats, or any sin protection, and surround the beds with litter or boards to protect it from the piercing wire revery day at the back of the frame, giving as much light as possible to the young plants.	in a hich wet uary arm have sum- vork n, — suffi- sow d by	
Early Russian. This variety resembles the Early Cluster; fruit from three to four inches long, an inch and a half in diameter; generally produced in pairs; flesh tender, crisp, and well-flavored; comes into was tendered in pairs;	roz.	
of the Early Cluster, and makes a fine small pickle. Per pkt., 5.  Early Cluster. A very popular early Cucumber, producing its fruit in clusters near the root of the plant; tender, and well flavored. Per pkt., 5.  Early Frame. One of the oldest of the garden sorts, justly styled a standard variation.	.15	
Early White Spine. One of the best table sorts, and greatly prized by market-men on account of its color, which never changes to yellow. The fruit is of full medium size, straight, and well-formed; skin deep green, prickles	.10	
white; flesh white, tender, crispy, and of remarkably fine flavor; very productive, and good for forcing. Per pkt, 5  Long Green Prickly. This is a large-sized variety, and somewhat later than the White Spine; skin dark-green, changing to yellow as the fruit approaches to maturity: flesh white, somewhat seedy, but crisp, tender, and well-	.15	
flavored; makes a good pickle if plucked while young. Per pkt., 5  Haage's White Cylindric. A new long white variety; very prolific bearer, and recommended as a most valuable acquisition. Per pkt., 26.	.15

Berkshire Champion; Carter's Champion, selected; Cuthill's Highland Mary; Carter's White Spine; Manchester Prize; Lynch's Star of the West; Lynch's Conqueror of the West; Star of the West; Sion House Improved; Sir Colin Campbell; Stilwell's Matchless; Weedon's Surprise; Kenyon's Favorite; Walker's Rambler; Napoleon III. Per pkt., .25.

### DANDELION.

These two varieties will, we have no doubt, soon supersede everywhere the olu one, which has become in the last ten years one of our best and most-asked-for winter and spring salads. Culture same as Spinach.

Large-leaved (improved). Improvement of the common Dandelion: its leaves are larger, erect, almost entire, or at least much less denticulated. Per pkt., 101.00

Thick-leaved (improved). This is also an improved variety; its leaves are smaller . 1.00 Common variety. .

PURPLE EGG-PLANT.

### EGG-PLANT (SOLANUM MELONGENA).

German, Cierpflanze. - French, Aubergine. - Spanish, Berengena,

The Egg-Plant was introduced from Africa, and is sometimes called the Guinea Squash. It is not generally cultivated, but is coming more into use every year. They are cut into thin slices, and fried, when they have a taste similar to oysters; they are also used in stews and soups.

Culture. — Sow in hotbed very early in spring; transplant, when two inches high, into a second hotbed; if that is not done, thin to four inches apart. Do not plant out till the weather becomes settled and warm. Keep plants watered for a few days if hot when put out. Where hotbeds are not convenient, a few plants can be started in flower-pots or boxes, and when planted out must have a deep rich soil, and full exposure to the sun.

Early Long Purple. Earliest, hardy, and most productive. Per pkt., 5 New-York Improved Purple. One of the largest and best varieties. Oval shaped, of a dark purple color; fine flavored. Grown extensively. Per pkt., 10

Pel-in, New Black. An entirely new and distinct kind, from China. grows erect and handsome, attaining the height of two to three feet: with rich, dark, bronzy-purple foliage, very ornamental. The fruits are round, or globular, of a deep purple, almost black, weighing four to eight pounds each; skin, smooth and glossy. Exceedingly prolific, and as early as the long purple. The flesh is white, fine grained, and more delicate flavored than the old varieties. Per pkt., 15.

### ENDIVE (CHICORIUM ENDIVIA).

German, Endivien. - French, Chicoree. - Spanish, Endvia.

The garden Endive is a native of Northern China, and has been cultivated in Europe the past three centuries for a winter salad. The French are particularly fond of it, using it raw,

pickled, fried, and boiled, esteeming it exceedingly wholesome in every form.

Culture. — For the early crop, sow about the 1st of July. It will do on the ground where early Cabbages or Peas have come off, by giving it a coat of manure. Draw drills the depth of the hoe, one foot apart, and sow therein; sprinkle a little earth in the bottom of the drill, sufficient to cover the seed, which will be up in a few days. Thin them our about two inches high, to ten inches apart; hoe freely, and keep clear of weeds. Thin them out, when grown in these shallow drills, they are more easily earthed up, and grow better in warm, dry weather. When the leaves have attained about eight inches long, they are fit for blanching; for this purpose a dry day must be chosen. Gather up the leaves in your hand, in a close and rounded form; see that there is no earth or litter in their centre. Tie them up with a piece of cotton twist or matting, which is to go several times round the plant, causing it to close at the top to prevent the rain from penetrating to and injuring its centre; then draw a little earth round its base for support.

Green Curled. Easily blanched; hardy, and well adapted for winter use. Per pkt., 5 White Curled, or Ever-blanched. Leaves pale yellowish-green, nearly white when

young; long, rather narrow; cut, and beautifully curled. Fer pkt., 5 .20

Fine Curled, or Moss. Very fine curled leaves, much resembling moss. Per pkt., 10

### KOHL-RABBI, or TURNIP-ROOTED CABBAGE.

German, Kohl-rabiuber. - French, Chou-rave. - Spanish, Col de nabo.

The Kohl-Rabi is a vegetable intermediate between the Cabbage and the Turnip. The stem, just above the surface of the ground, swells into a round fleshy bulb, in form not unskem, just above the strates of the ground, swens into a round nessly buth, in forth its leaves, which are similar to those of the Swedish Turnip. The part chiefly used is the turnip-looking bulb, formed by the swelling of the stem. This is dressed and eaten with sauce or with meat, as turnips usually are. While young, the flesh is tender and delicate, possessing the combined flavor of the Cabbage and Turnip.

Culture. Cultivated same as Cabbage; only that, in earthing up the plant, be care-

ful not to cover the globular part. They should not be used before they have attained their

full growth.

Early White Vienna. Above ground; early and fine. Per pkt., 10 . .30 Early Purple Vienna. Above ground; similar to the preceding. Per pkt., 10 .

Late Purple Giant. Very large and tender variety, often weighing from seven to .25 .40 eight lbs.; new. Per pkt., 10 .

### LEEK (ALLIUM PORRUM). German, Lauch. - French, Poireau. - Spanish, Puerro.

This is a branch of the Onion family, - a native of the north of Europe; is very hardy, and, from its mild qualities, is preferred by many families to the Onion. History records it as having been cultivated many hundred years. The Welsh indulge in Leeks on their patron St. David's Day, in commemoration of a victory which they obtained over the Saxons, which they attributed to the Leeks they wore, by order of St. David, to distinguish them in battle.

Culture. - There is no part of the garden too rich for Leeks. They require the best ground, well worked, and manured the full depth of the spade. Sow the seed thinly on a small bed of light rich ground, in drills six inches apart and half an inch deep; rake it small bed of light flee ground, in this six lifeness apart. When they come up, they should stand an inch apart; if thicker, thin them out. When grown to about eight inches high, they will be of sufficient size to plant out in drills a foot apart, and as deep as the hoe will When ready, the plants are to be taken up from the seed bed. Shorten their roots to about an inch from the plant, and cut two inches or more from the extremity of the leaves. Dibble them in the drills eight inches apart, and as deep as the plant will admit of, not to cover the young leaves pushing from its centre. Hoe the ground frequently, to keep down weeds, and, as the plants are observed to grow, draw the soil around them. By good cul-ture, they will be fit for use early in October. On the approach of severe frost lift sufficient for winter use, and store them away in earth or sand.

per oz. 

Bruad Scotch, or Flag. Remarkably hardy, and well suited for open culture; large and strong-growing. Per pkt., 10

### LETTUCE (LACTUCA SATIVA).

German, Lattich. - French, Laitue. - Spanish, Lechuga.

The Lettuce is generally divided into two classes: viz., Cabbage Lettuces and Cos Lettuces. The Cabbage have round heads and broad-spreading leaves; the Cos varieties have long heads, and upright, oblong leaves.

Culture. - A very rich soil is necessary to produce fine head Lettuce. Its crisp and tender quality depends very much on a luxuriant and vigorous growth. The earliest sowing may be made in February or March, under glass with slight heat. Keep the plants thin, and admit plenty of air to the frame every fine day. For later supplies, sow in the open ground as soon as the season will permit; transplant or thin out the plants gradually to a foot apart, and keep well cultivated.

Early-curled Silesia. Standard sort; very early; the best for forcing, and the first spring sowing; makes a loose head; excellent flavor. Per pkt., 5 Early Tennisball. Most esteemed of the Cabbage Lettuce. The head is below medium size; dark-green; one of the earliest and best. Per pkt., 10 . .30

Early Drumhead, or Malta. Head large, somewhat flattened, compact; green without, and white at the centre; crisp; fine summer variety. Per pkt., 5 .20 Boston Curled. One of the best for general cultivation. The elegant frilling of the

leaves, and fine form, make it very attractive; flavor very fine. Per pkt., 10 .30 Large India. Heads large and compact, similar to the Curled Silesia; is less curled,

and whiter; tinted with brown; heads crispy, and fine flavor. Per pkt., 10 .40 Wheeler's Tom Thumb. A new English variety; very dwarf and compact; excellent flavor; crisp and refreshing. Per pkt., 10 .40

Hammersmith Hardy Green. It is considered the hardiest sort in cultivation, and is one of the best for growing in winter or forcing. Per pkt., 5 .39

White Paris Cos. This variety is grown mostly by London and Paris market-.25 gardeners; tender, brittle, and mild-flavored. Per pkt., 10 Large-spotted, or Tigered. Tender variety, with spotted leaves. Per pkt., 10 .40

Blood-red. Very tender variety, with red leaves; new. Per pkt., 10 .40 Perpignan. A fine variety, forming large solid heads, with very crisp and tender leaves; new. Per pkt., 10 .30

Said to be the best Cabbage Lettuce in cultivation; in shape, color, and quality, it resembles the Batavian Lettuce. Per pkt., 10. .40

Carter's Giant Brown Cos. Very large, crisp, and fine-flavored, with large broad leaves well turned; is one of the best late sorts. Per pkt., 10. .40

Dunnett's Giant Brown Cos. An English sort, similar to the preceding. Per .40 packet, 10.

All the Year Round. A hard, crisp-eating, and compact-growing Cabbage Lettuce, with small, close heads; deep green. If sown in succession, it will provide Lettuce "All the Year Round." Per pkt., 10. 40

MARTYNIA.

### MARTYNIA (MARTYNIA PROBOSCIDIA).

A hardy annual plant, with a strong branching stem two feet and a half high. 'The reaves are large, heart-shaped, entire, or undulated, downy, viscous, and emit a peculiar musk-like

oder when bruised or roughly handled. The young pods are the parts of the plants used. These are produced in great abundance, and should be gathered when about half grown, or while tender and succulent. After the hardening of the flesh, they are worthless. They are used for pickles, and by many are considered superior to the Cucumber, or any other vegetable employed for that purpose.

Culture. — The Martynia is of easy culture. As the plants are large and spreading, they should be two and a half feet apart in each direction. The seeds may be sown in April or May, in the open ground, where they are to remain; or the seeds may be sown earlier in a hotbed, and transplanted.

LARGE MUSK MELON.

CITRON WATER-MELON.

### MELON, MUSK VARIETIES (CUCUMIS MELO).

German, Melone. - French, Melon. - Spanish, Melon.

The Melon, in some character, is to be found in all tropical countries: the finest varieties are supposed to have come from Persia and Afghanistan. The delicious flavor and perfume make it very popular in all countries where the climate will admit of its cultivation.

Culture. — Plant in hills six feet apart each way, eight or ten seeds in each, and thin out to three or four plants when in a state of forwardness. To grow good melons, the hills should be prepared by digging out the soil from one and a half to two feet deep, and two or three feet broad, according to the richness of the land. Add a very liberal quantity of the best decomposed stable-manure, and mix well with the soil, filling up a little above the level. Seeds should not be put into the hills until the weather becomes settled and warm.

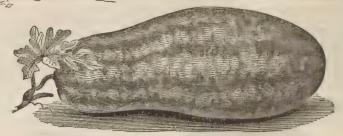

per oz	
Christiana. Form roundish; size rather small; flesh vellow, sweet, juicy, and of	
good quality; one of the best; very early. Per pkt., 10	)
Green Citron. Nearly round, flattened slightly at the ends; medium size; flesh	
green, quite thick, and of the richest and most sugary flavor. Per pkt., 5 18	
Nutmeg. Fruit oval, good size, thickly netted; flesh light-green, rich, sweet, melt-	
ing, and highly perfumed; one of the finest. Per pkt., 5	,
Pine Apple. Form roundish, inclining to oval; flesh green, melting, sweet, and per-	
fumed; early and productive. Per pkt., 5	)
Skillman's Fine-netted. Resembles the Pine Apple; flesh green, sugary, and excel-	
lent; the earliest of all the green-fleshed varieties. Per pkt., 5	)
Persian. Long oval, skin thin and delicate; extremely tender, rich, and sweet, and	
flows with a cool juice, which renders them very grateful. Per pkt., 10 .30	
Large Yellow Cantelope. Oval; good-sized; skin yellow, marbled with green;	
flesh salmon-colored, sweet, highly perfumed, good flavor. Per pkt., 5	
Large Musk. Long oval, deeply ribbed: flesh very thick, yellow, sweet, and juicy,	
with musky flavor; very early and productive. Per pkt., 5	
New White Japan. Decidedly the sweetest thin-skinned of the Musk Melon; color	,
of fruit cream-white; flesh thick. Per pkt., 5

fine varieties for forcing. Per pkt., 25.	

### WATER-MELON (CUCURBITA CITRULLUS).

German, Wassermelone. - French, Melon d' Eau - Spanish, Sandia.

The Water-melon is purely a tropical fruit, greatly appreciated for its refreshing coolness and delicious flavor.

## COBB & WASHBURN'S

### MOUNTAIN-SWEET WATER-MELON

Culture. Same as Musk varieties.	° 02.
Mountain Sweet. A large, long, oval variety; skin striped and marbled; flesh scar-	
let, solid to the centre; very sweet and delicious. Per pkt., 5	.10
Mountain Sprout, or Long Carolina. Resembling the preceding. A favorite	
market sort. Very fine quality, and productive. Per pkt., 5	.15
Black Spanish. Form oblong; size large; skin very dark or blackish green; flesh deep-red, fine-grained, very sugary, and productive. Per pkt., 5.	15
Ice-cream. A very large pale-green sort; form nearly round; flesh white, very	.10
sweet, tender, and of remarkably fine flavor. Per pkt., 10	.20
Orange. Form oval, of medium size; flesh red, tender, sweet, and of good quality.	
When in its mature state, the rind separates readily from the flesh, in the	0.0
manner of the peel from the flesh of an orange. Per pkt., 10	.30
Citron. Employed in making sweetmeats and preserves; form round, medium size; flesh white, very solid. (See engraving on p. 101.) Per pkt., 5	. 10
"Phinney's." Is a very elegant mottled grass-green color; is exceedingly prolific.	
very early, sweet, and of delicious flavor. Per pkt., 10.	
Apple-seeded. A small, nearly round sort; derives its name from its peculiar seeds.	
Flesh red to the centre, sweet, tender, and well-flavored. 1ser pkt., 10.	.40
Persian Water. Introduced by the celebrated Bayard Taylor, brought by him from the Caspian Sea. It is globular in form, of pale-green color, with dark	
stripes; flesh crimson, and remarkably firm texture, with only half an	
inch of rind; it can be taken off the vine to ripen, and will keep till win-	
ter. Very large size. Per pkt., .25.	
THE EXCHEN A WARD (Co T	

#### MUSTARD (SINAPIS VAR).

German, Seuf. - French, Moutard. - Spanish, Mostaza.

Mustard-seed is too widely known and appreciated to need description. It is useful both in its natural state and manufactured, and is considered wholesome in all its various methods of preparation. It is very refreshing when in its green state, mixed with salads, and for that purpose alone is worthy of cultivation.

Culture. - This salad is cultivated in the same manner as recommended for Cress.

White, or Yellow. Very useful for salads; also for medicinal purposes. Per pkt., 5 .30 Brown, or Black. For culinary use. Per pkt., 5 . . .

### OKRA, OR GOMBO (HIBISCUS ESCULENTUS).

German, Essbarer Hibiscus. - French, Gombo. - Spanish, Quibombo.

This plant is cultivated to some extent as a vegetable: served in the same manner as Asparagus. The green seed-pods are used in soups, and deemed a luxury. It is becoming very popular since its introduction to us from the West Indies.

Culture. The seeds are sown thinly, on dry, warm soil, in shallow drills two feet apart,

about the same as the Lima Bean. Cover the seeds lightly. After the plants are up, thin them out to nine inches apart, hoe freely, and draw a little earth to the stems as they continue to grow. Gather the pods when quite green, and about an inch and a half long.

Improved Long Green. Pods long and ribbed. Per pkt., 5

### ONION (ALLIUM CEPA).

German, Zwyebel. - French, Ognon. - Spanish, Cebolla.

No vegetable is more extensively known and cultivated than the Onion. It has been the common seasoning for soups and meats of all nations from the earliest period to the present

## CULTIVATOR'S

Culture. The soil in general cannot be too rich for this vegetable; and, however good it may be, it requires more or less manure for every crop. Previous to sowing, the ground should be thoroughly spaded over, or deeply ploughed, and the surface made smooth and even. The seed should be sown as early in spring as the soil may be in good working condition. Sow in drills fourteen inches apart, and half an inch in depth. When the plants are three or four inches high, thin them out to two inches apart.

To grow Onions for pickling, sow the seed thinly in March or April. No further culture is required, except hand-weeding, as their thickness in the bed will prevent their growing

large, and will cause them to come to maturity sooner.

	0%.
Early Red. A sub-variety of the Large Red Wethersfield, and the earlies or the	
Red Onions. Very productive. Per pkt., 5	.15
Large Red Wethersfield. Large, skin deep purplish-red; flesh purplish-white;	
fine grained, and stronger flavored than that of the yellow and earlier red	
varieties. Productive, and one of the best to keep. Per pkt., 5	.10
Danvers Yellow. A fine variety; above the medium size; globular in form; skin	
yellowish-brown; flesh white, sugary, mild, and well-flavored. Very pro-	
ductive. Per pkt., 5	.10
Extra Fine, from selected onions; \$1.50 per lb	.3)
Yellow Dutch, or Silver-skin. One of the oldest varieties; flesh white, fine-	
grained, mild, sugary, and well-flavored. Per pkt., 5	.10
White Portugal, or Spanish. A very large, flat onion. Skin loose, of a mild	
flavor; fine for early winter use, but decays early. Per pkt., 5	.15
The state of the state of the state of a dayler rade it has	
Red Sallon. Shape and size resembles the Madeira; color is of a darker red; it has	
a stronger onion flavor, and keeps better; fine variety. Per pkt., 15.	

YELLOW DUTCH ONION.

### PARSLEY (APIUM PETROSELINUM).

German, Petersilie. - French, Persil. - Spanish, Peregil.

The garden Parsley is a very useful and pleasant vegetable. Its seasoning flavor for soups and stews is very agreeable to many. It may be preserved by drying it till crisp, in summer; then rub it fine between the hands, and put in bottles for winter use.

Culture. Sow it in drills half an inch deep, early in April. When the plants are three or four inches high, thin them to six inches apart; to keep a young stock constantly for use, cut down about a third part at a time. Keep it only from severe frost. For this object, select a warm spot of ground, light and rich; sow it early in the season; cut them all over in September; surround the bed, early in November, with boards, and cover with mats or shutters; glass is much better, if it can be obtained.

Plain Parsley. The leaves of this sort are plain, or not curled; but it is better fla-	OZ.
vored than the curled for soups, &c. Per pkt., 5	.10
Curled, or Double. A fine dwarf variety, tender; beautifully crimped and curled.	
Fine for garnishing dishes for the table. Per pkt., 5	.10
Dickson Extra, or Triple-curled. A new and fine English variety. Per pkt., 5	.10

### PARSNIP (PASTINACA SATIVA).

German, Pastinake. - French, Panais. - Spanish, Pastinaca.

The Parsnip is a biennial plant, similar to the Onion, Turnip, and Carrot in duration. is both wholesome and nourishing, and desirable for winter and spring use. Culture. Same as Carrot. Scatter the seeds thinly, and cover evenly with the rake.

Long Smooth. Roots long, white, smooth, and regularly tapering to the end: free from side-roots. Very hardy, keeping through the winter where grown

without any protection. Per pkt., 5 .

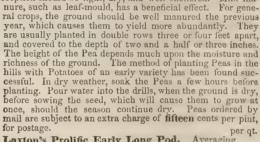

### MASHBURN'S COBB &

Per og Hollow Crown. Roots oblong, ending somewhat abruptly with a small tap-root; grows mostly below the surface. Best garden variety. Per pkt., 5

### PEAS (PISUM SATIVUM).

German, Erbse. - French, Pois. - Spanish, Guizante.

Culture. - Peas, for an early crop, should be sown as soon as the ground is in working condition. The soil for their reception should be light, dry, and well sheltered. Mild ma-

Laxton's Prolific Early Long Pod. Averaging eleven and twelve peas in a pod; and they were pronounced by several eminent members of the London seed-trade to be an exceedingly fine variety. For a second early pea, there is no pea of a similar class in cultivation to equal it; and we feel every confidence that it will be in general cultivation in a very few years. The same habit and character as Dixson's Favorite, excepting that the pods are nearly double the size.

Laxton's Supreme. A variety raised from Laxton's Prolific crossed with Little Gem. plant grows about 34 feet in height, and is quite as early as Daniel O'Rourke, m great advantage in a Pea of such high-class quality.

The editor of "The Gardener's Chronicle"

says it is "a grand Pea, the sample sent exhibited remarkably fine large full pods." The Royal Horticultural Society of England describe this as "a grand Pea, a Green Marrow of excellent quality, with very long well-filled curved pods." Per pkt., 10

Imperial Wonder Pea. A fine large wrinkled variety; habit resembling Veitch's Perfection, but coming in three weeks later. Per pkt., 15.

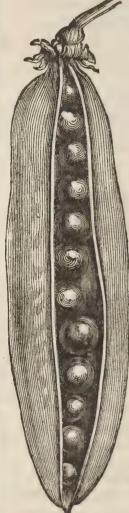

Early Dan O'Rourke (Pure). One of the earliest in cultivation; pods well filled; of good size and quality; of the finest flavor; three feet .30 high .

Carter's First Crop, or Sutton's Ringleader. It has proved to be the earliest Pea grown; also very prolific; height 21 ft.

Early Dillestone. This is undoubtedly one of the earliest Peas known; seven or eight days earlier than the Dan O'Rourke; fine flavor; good size, and one of the best

Drew's New Dwarf. Remarkable for its dwarf and branching growth, forming a bush one foot high, and one foot broad: consequently, only about one plant to each foot of row is required. It is medium in earliness, and extremely productive per pkt., 15.

Peas per pkt., 10 cents. except those quoted higher.

(	mild, and pleasant; used for salads and pickling. Per pkt., 10	.40	

#### MASHBURN'S COBB Long Red Arabian. Very pretty; fruits upright, smaller than the ancient varieties; produced in greater quantity, and more pleasing shape. Per pkt., 10. Monstrosus, or Grossum. A new, remarkably fine variety, growing to very large size; highly recommended for stuffing. Per pkt., 10. PUMPKIN (CUCURBITA PEPO). German, Kurbis. — French, Courge. — Spanish, Calabaza. We cannot think of admitting this vegetable into the precincts of a garden where there are Cucumbers, Melons, and others of similar class. It would mix with and contaminate the quality of the more valuable sorts; besides, they would occupy more space than most could allow, as many of the varieties attain enormous size. Culture same as Squash. Sugar. Smaller, fine-grained, sweet; the best for family use. Vermont seed. Per .10 pkt., 5 Large Yellow. Grows to a large size; better adapted for feeding purposes than for .10 cooking. Per pkt., 5. Per lb., 50 Mammoth. A very large, coarse-growing variety. Per pkt., 10 .40 RADISH (RHAPHANUS SATIVUS). German, Rettig Radies. - French, Radis, Rave, Petite Rave. - Spanish, Rabano. The Radish is a hardy annual plant, much esteemed for its grateful relish, and is extensively cultivated for its roots. Its excellence consists in being succulent, mild, crisp, and tender; and the roots should be eaten before they are overgrown, which makes them The seed-pods are excellent for pickling if gathered while young and green. Culture. For early crops, sow in spring, as soon as the ground can be worked, in light rich soil; for later crops, a deep, moist soil is preferable. Sow the seed thinly in drills, covering them with about a quarter of an inch of earth. For early use, sow on gentle hotbeds. Early Short-top Long Scarlet. Roots long, growing partly out of the ground, of a beautiful deep pink color; flesh white, transparent, crisp, and of good Standard sort for marketing or private use. Per pkt., 5 .10 Scarlet Turnip. A very early variety, deserving cultivation on account of its rich color, crisp and tender qualities; should be used while young. Per pkt., 5 White Turnip. Bulb similar to the preceding. Skin white; flesh white and semitransparent. Some days later than the scarlet. Per pkt., 5 Scarlet Olive-shaped. In the form of an olive. Skin fine scarlet; neck small; flesh rose-colored, tender, and excellent; well adapted for forcing. Per pkt., 5 .10 Black Spanish. One of the latest of the Radishes, and is considered an excellent sort for winter use. Large size; color black; of firm texture. Per pkt., 5 .15 Rose-colored China Winter. Size medium; skin comparatively fine, and of bright rose-color; flesh firm, rather piquant. Late variety. Per pkt., 10 .15 New French Breakfast. A new quick-growing variety. Oval form; color scarlet, tipped with white; fine flavored; excellent for forcing. Per pkt., 5 .10 White-tipped Scarlet Turnip. This is a new variety, which will prove more acceptable than our white-tipped Scarlet Olive-shaped, on account of its round root. Per pkt., 5 . .10 "Raphanus Caudatus," or Edible Podded Radish. This valuable new vegetable belongs to the Radish tribe; but, unlike that esculent, the seedpods (not the root) are eaten: these are very curious, attaining an immense size in a wonderfully short time, sometimes growing as much as three inches in a night. This vegetable can be used in various ways; indeed, it may be regarded as one of the most useful that have been in-

vegetable belongs to the Radish tribe; but, unlike that esculent, the seed-pods (not the root) are eaten: these are very curious, attaining an immense size in a wonderfully short time, sometimes growing as much as three inches in a night. This vegetable can be used in various ways; indeed, it may be regarded as one of the most useful that have been introduced for many years. Producing extraordinary siliquas (pods), which are very remarkable from their attaining the enormous length of about two feet. These pods have a most agreeable flavor, and when about half-grown can be eaten in the same way as roots of the common Radish, which they greatly resemble in taste, but are far superior in delicacy of flavor. In salads they will be highly estimated; for, added to their other merits, they possess the excellent advantage of being easily digested; they also make a good pickle, for which purpose they are well adapted. It is, however, when the pods are boiled that they are most delicious, eating like marrow, and having a most delicate flavor; they should be served on toast, and will form a most agreeable addition and novelty for the table. Per pkt., 10

50

#### RHUBARB (RHEUM HYBRIDUM).

German, Rhubarber. - French, Rhubarbe. - Spanish, Ruibarbo Bastardo.

Culture. Rhubarb succeeds best in deep, somewhat retentive soil. The richer its condition, and the deeper it is stirred, the better. Sow in drills an inch deep. Thin out to six inches apart. In the fall, trench a piece of ground, and manure it well; then transplant the young plants into it three feet apart each way. Cover with leaves or litter the first winter, and give a dressing of coarse manure every fall.

				per	OZ
Victoria.	A large variety; one of the best for general use. Per pk	t., 5			.25
Linneus.	Large tender and fine-flavored Per nkt 5				25

### SALSIFY, or OYSTER PLANT (TRAGOPOGON PORRIFOLIUS).

German, Bocksbart. - French, Salsifis. - Spanish, Ostra vegetal.

The Sassify is a hardy biennial plant, and is principally cultivated for its roots, which are long and tapering, and, when grown in good soil, measure twelve or fourteen inches in length. It is considered wholesome and nutritious. When cooked, the flavor resembles that of the oyster, and is a good substitute for it: whence the popular name.

#### SCORZONERA, or BLACK SALSIFY (SCORZONERA HISPANICA).

German, Schwarzwurzel. - French, Scorzonere. - Spanish, Escorzonera.

#### SPINACH (SPINACIA OLERACEA).

German, Spinat. - French, Epinard. - Spanish, Espinaca.

Spinach is very hardy, and consequently a very important vegetable for cold climates. It is extremely wholesome and palatable.

Culture. Spinach is best developed and most tender when grown in rich soil. It should be heavily manured and deeply trenched. Sow early in March for summer crop, in drills, which method renders the cultivation and the gathering of the produce more convenient. Encourage the growth with frequent hoeing, which draws the moisture to the roots. For a succession, a few seeds of the summer varieties may be sown, at intervals of a fortnight, from April to August. Sow from the middle of August to the beginning of September, for the winter crop, in a light sandy soil, on raised beds, which enables it better to stand the severe frost. Thin the plants as soon as they are strong enough to draw, leaving them about nine inches apart in the row. Two ounces of seed will plant five drills, each forty feet long.

ture, and erect; the hardiest, and most used for fall planting. Per pkt., 5.10

New Zealand. Its merit consists in the fact that it grows luxuriantly, producing leaves of the greatest succulency in the hottest weather. Per pkt., 5.15.

TURBAN SQUASH.

YOKAHAMA SQUASH.

Qurtis, {Qobb & Mashburn's

MAMMOTH PRIZE SQUASH. - Weight 180.

SQUASH (CUCURBITA MELO PEPO).

German, Kurbiss. - French, Courge. - Spanish, Calabasa tontanera.

The several varieties of the Squash are very useful in this and other warm climates, as they can be grown to perfection in the summer. It is in general use from June to August, and the late varieties the whole winter until May. It is extensively cultivated in this vicinity for the market.

Culture. Any good enriched soil is adapted to the growth of the Squash. They only thrive well in a warm temperature, as all the varieties are tender annuals; and the seed should not be sown in spring until all danger from frost is past, and the ground is warm and thoroughly settled. The hills should be made from eight to ten inches in depth, manured well, and the seeds covered about three-fourths of an inch deep. Keep the earth about the plants loose and clean, removing the surplus vines from time to time, allowing not more than three plants to a hill. The custom of cutting or nipping off the leading shoots of the running varieties is now practised to some extent, with the impression that it both facilitates the formation of fruitful laterals and the early maturing of the fruit.

Early Yellow Bush Scalloped. An early, flat, scallop-shaped sort; color yellow;

flesh pale yellow, fine-grained, and well-flavored; productive. Per pkt., 5 .10

Early White Bush Scalloped. A sub-variety of the Yellow Bush. Per pkt., 5 .10

Early White Bush Scalloped. Converting the flower of the flower of

Early Summer Bush Crookneck. Generally esteemed as one of the finest of the summer varieties; color bright yellow; skin very warty, thin, and easily broken; flesh dry and well-flavored. Per pkt., 5

HUBBARD SQUASH.

Fall or Winter Crookneck. Most generally cultivated for fall and winter use; flesh salmon-red, close-grained, dry, sweet, and fine-flavored. Per pkt., 5

100

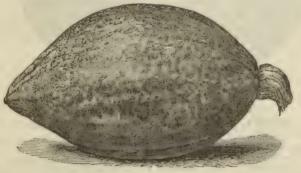

CANADA CROOKNECK SQUASH.

per oz.

Canada Crookneck. A small variety of the preceding; ripens early, and, all things considered, is one of the best for general cultivation. Per pkt., 10 .20

Melon. New. A summer variety; small, yellow flesh, melon-shaped; excellent quality, and very productive. Per pkt., 10 .25

#### THE MARBLEHEAD SQUASH.

Marblehead. A new variety of the finest quality, weighing from 10 to 15 lbs.; one	
	15
Mammoth. The largest known. Seeds which we offer were saved from a squash	
weighing one hundred and eighty pounds, — a monster. Per pkt., 10.	40
Turban, or Turk's Cap. A superior late-growing variety; of a greenish color,	
striped with white, and thus in form and color somewhat resembling a	
turban, whence the name; flesh orange-yellow, thick, fine-grained, sugary,	
and well-flavored. Per pkt., 10	25
Yokohama. A new variety from Japan; finest grained of all the Squashes, with a	
rich Marrow flavor. Per pkt., 10	25
Lungren. The leaves are singularly variegated with yellow, the depths of color vary-	
ing in different plants from pale yellow to bright orange, and differing also	
in the amount of variegations as the season progresses. The color is most	
profuse at the base of the leaf, and is distributed thence in serrated stripes,	
towards, but not reaching, the borders.	
The fruit is bottled-formed, much resembling the "Puritan;" entirely	
white, about one foot in length, eight inches in its greatest diameter, and	
weighs from eight to ten pounds. The stem is thick, short, and fleshy. The flesh is pale yellowish-white, thick, fine-grained, dry, and sweet, and	
peculiarly free from the strong flavor common to many varieties. It cooks	
-ell, early or late in the season, and even before it has attained its full	
atze, and is also a good keeper. Per pkt., 25.	
SUNFLOWER.	

New Mammoth Russian. This is a new variety; and, under ordinary cultivation, the heads grow to the enormous size of twenty inches in diameter. The

## Curtis, Cobb & Mashburn's

seeds are large, exhibited at the Massachusetts Horticultural Exhibition, and highly commended by the Committee for ornamental purposes. For planting in shrubberies, it is a desirable acquisition. Salad oil of superior quality is extracted from it. To poultry-keepers it is invaluable for its extraordinary productiveness. Per pkt., 10.

GENERAL GRANT TOMATO.

#### TOMATO (SOLANUM LYCOPERSICUM).

German, Liebesapfel. - French, Tomate. - Spanish, Tomate.

There is no vegetable on the catalogue that has obtained such popularity in so short a time as the one now under consideration.

Culture. The Tomato is raised from seeds, which should be sown in a hotbed in March, or in pots in a warm window. They should be started as early and forwarded as rapidly as possible, whether by hotbed or open-air culture. When about two inches high, they should be transplanted, in single plants, to warm, light, rich soil. Water freely at the time of transplanting. Shelter from the sun for a few days, or until they are well established. If sown in the open ground, select a sheltered situation, pulverize the soil finely, and sow in drills. This may be done the last of March or first of April. When the plants are three or four inches high transplant to where they are to remain, as before directed.

drills. This may be done the last of March or first of April. When the plants are three of four inches high, transplant to where they are to remain, as before directed.

Per of Little Gem. (The earliest variety known.) The vines are of medium length, compact growth, and excessively loaded with bright-red fruit of medium size, round, and of uniform shape, varying from four to six inches in circumference; of superior quality either raw or cooked. Its bright, glossy-red color, uniform size, shape, and otherwise beautiful appearance, make a dish of little gems almost as tempting as a plate of strawberries. Per pkt.

Acme. This new and beautiful variety for exceeds any thing ever before introduced among the many varieties of this valuable esculent. The plants are of a strong and vigorous growth, very productive; the fruit is beautiful in form and color, and one of the most perfect ever introduced. Per

pkt. of about one hundred seeds

"General Grant." The unrivalled prize variety. Size above medium, producing fruit in clusters; form round, slightly flattened, very regular, symmetrical, seldom ribbed or wrinkled; color brilliant crimson; flesh firm and solid; flavor very superior, and retains it a long time. Per

The Trophy. A great favorite with cultivators, possessing qualities of excellence that no other tomato has. Fruit large, smooth, and solid; color rich crimson-red; and one of the best as regards flavor. Per pkt., 10

The Conqueror. The fruit is borne in large clusters, very perfect in size; color deep-red, having the appearance of being dusted with gold. Flesh solid and delicately flavored. Per pkt., 15; 6 pkts., 75.

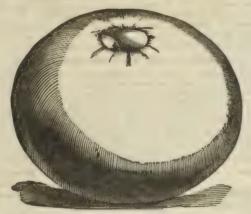

.50

.30

.15

#### WULTIVATOR'S GUIDE. ALMATEUR

per	OZ,
The Arlington. Color bright red, and ripens to the stem. Fruit, when cut, is solid from centre to surface, and is remarkably productive. Per pkt., 10.	.30 \$
round to roundish-oval, which is the general form of the main crop, and	
is free from the warty protuberances which disfigure ordinary sorts. Color, light brilliant scarlet, with a glossy skin; flesh solid, light red, less	
watery than other kinds, and of good flavor. Per pkt., 5	.80
Tree, or Erect. Fruit very large and smooth; and the plants, from their erect, compact growth, highly ornamental. Per pkt., 10	1.50
Large Smooth Red. Fruit somewhat flattened, inclining to globular; medium size; skin deep rich crimson; flesh bright pink or rose color. Per pkt., 5	.25
Lester's Perfected. Of recent introduction; regular form; large size; flesh firm and well-flavored. Per pkt., 10.	.40
Large Red. A very early variety, of large size; skin bright-red; flesh pink or rose color. Per pkt., 5	.25
Large Yellow. Clear, semi-transparent, yellow skin and yellow flesh; little used except for preserving and pickles. Per pkt., 5.	.30
Grape. A quite small red variety, growing in long clusters, like grapes, and useful for preserves; a new variety. Per pkt., 5	.30
Early York. Very early; of good size, productive, and fine flavor. Per pkt., 10.	.30
Cook's Favorite. Medium size, oval form, fair skin, deep crimson, productive, and excellent flavor; one of the best for general cultivation. Per pkt., 5	.30
Strawberry, or Ground Cherry (Physalis Alkekengi). This, though called a To-	
mato, is a distinct species; excellent for preserves, having a peculiar delicate strawberry flavor. Per pkt., 10	.40

MAUPAY'S SUPERIOR TOMATO.

#### TURNIP (BRASSICA RAPA).

German, Steckrube. - French, Navet. - Spanish, Nabo comun.

This is a wholesome and useful plant both for man and beast, and highly deserving of cultivation. It has become in some countries an extensive field-crop.

Culture. Sow as early as the ground will allow, in drills fourteen inches apart and half an inch in depth. The young plants should be thinned to five or six inches asunder. When the bottoms begin to enlarge, remove the earth gently to the depth of an inch and a half, and apply wood-ashes. The sowing for the winter's supply is made in August. One thing must be observed,—to have the ground always fresh dug before sowing.

per oz.

#### GRASS-SEED FOR LAWNS.

One of the most pleasing features connected with a garden is a well-kept lawn; but, to secure this most desirable object, much depends upon the selection of such grasses as will present a fresh and luxuriant verdure throughout the season. For this purpose, a mixture of several kinds of the finer grasses is most suitable. These we can supply ready mixed, of the best sorts, and proper proportions of each. The quantity usually sown is two bushels per acre. Per bushel, \$6.00; 20 cents per qt. Extra fine French, best adapted for dry soil, 30 cents per qt.

## RARE FLOWERS AND NOVELTIES

FOR 1871-2.

Particular care has been taken that the selection should be of the purest character. We cannot affirm the accuracy of the various descriptions, having tested but few of them; but the reputation of the growers from whom we import is to us the best assurance that satisfaction will surely follow. Our patrons wishing novelties will please send their orders early, as our stock of some of the varieties is limited.

	per	pkt
1003	Asters, Shakspeare. This new Aster is said to be the finest of all the dwarf	
	sorts. Five inches high; densely formed; flowers very double, of the	-
	brightest colors, and of a regular imbricated form. Its dwarf, compact,	
	and free-flowering habits, make it very useful either for the garden or pots	.25
1004	- New (La Superbe). Azure blue. To the beautiful rose variety which was,	
	in fact, the only one of this race, may be added this charming variety	
	with azure-blue flowers. It cannot fail to meet the same general favor	OK
1005	Now collular Victoria Most charming north in heliciality of	.25
1003	New cellular Victoria. Most charming novelty; in habit similar to	
	the Victoria Aster; the petals, however, instead of lying flat upon each	
	other, resemble so many tubes open at the ends, forming small cells.	
	The particularly elegant appearance of the flowers is derived, in a great	
	measure, from the symmetrical arrangement of the cells	.25
1006	- Mont Blanc. Fine improvement, belonging, like the Victoria, to the Py-	
	ramidal Asters. Plants of luxuriant growth, about three feet high, cov-	
	ered with large, pure-white flowers five inches across, very double, and	
	so disposed as to give to the plants the appearance of complete pyramids	.25
1007	Abronia Arenaria. Nice species, with clear, waxy-yellow, sweet-scented	
	flower; habit like A. umbellata	.25
1008	Amaranthus Bicolor ruber. Splendid bedding plant, with abundant foliage	
2000	of a bright fiery-red passing towards the summit to bright carminate	
	scarlet, and sometimes tipped with yellow. Far superior to the old	
	(A hierlan) For flower-body there is among the subola agreemental	
	(A. bicolor). For flower-beds, there is, among the whole ornamental	05
1000	foliaged section, certainly not a finer and more striking plant to be found	.05
1008	- Silicifolius. This plant is of pyramidal form, attaining a height of from	
	two and a half to three feet, branching close to the ground, the lower	
	branches being twelve to fifteen inches in length, and extending in a	
	horizontal position. The leaves, which are beautifully undulated, vary	
	in the earlier stages of growth from a green to a bronzy-green shade, and	
	are from five to seven inches in length by about a quarter of an inch in	
	width. As the plants get stronger, the leaves at the ends of all the prin-	
	cipal branches assume a bright orange red color, and become more elon-	
	gated, generally being from ten to fifteen inches in length, forming	
	magnificent bright-colored plumes, and giving the plant a most elegant	
		.10
1010	Aquilegia glandulosa (true). We are in a position to offer seed of this	
1010	variety, true. Flowers gathered from the bed from which the seed was	
	variety, true. Flower's gathered from the bed from which the seed was	.25
1011	saved measured four inches in diameter	.25
	Pulchella	.20
1012	- Rubra. "Two novel forms of Columbine have recently come under	
	our notice. The one is a single red, with the petals margined with white	
	forming a red centre; the other a deep chocolate color margined in a	
	similar manner. They are distinct from any other varieties."	.25
4013 -	Hortensis. Dark brown. Very fine variety, reproduced true from seed	.25
1014	Balsam, Double. Scarlet red. (Impatiens Balsaminea atrosanguinea.)	
	Balsam, Double. Scarlet red. (Impatiens Balsaminea atrosanguinea.) very fine plant, splendid color	.60
1015	Centaurea Clementei (Veitch). The foliage is very elegant, and covered	
	Centaurea Clementei (Veitch). The foliage is very elegant, and covered with a snow-white down. The numerous ramifications are terminated	
	by an inflorescence of straw-colored florets. Splendid for edges of large	
	groups, the centres of other colored beds, and for isolated clumps	.25
1016	Cineraria Maritima candidissima. This variety may be best described	
2010	as possessing the substance and general character of Cineraria maritima,	
	but a more decided white color combined with the dwarf habit and	
	but a more decided white color, combined with the dwarf habit and	.25
4018	peculiarly graceful and serrated form of Centaurea candidissima	.20
FOLY (	Coleus finest mixed. We have received a few seeds of this favorite plant	
	from a celebrated German grower, which we can recommend as very	
	fine. These beautiful, fine-foliaged plants cannot be too highly estimated	-
	for garden decoration. Sow seeds same as Calceolaria. See page 9 .	.25

1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	- 0	N
1018 Gilia Liniflora. Remarkable and pretty species; of oranching habit, with deeply-palmate foliage, and large white flowers three-quarters of an inch	1 4	1
in diameter; forms a bushy tuft nine inches high, and the same in width 1019 Ipomea fine Mixed. (New Morning Glory.) An elegant and highly or namental genus of climbers, with handsome and showy flowers, combining	5	MAN AND AND AND AND AND AND AND AND AND A
many brilliant colors with pure-white margins varying in shade from the most intense blue to the most delicate cerulean; many beautifully striped For separate sorts, see page 74. See Frontispiece	3	1
1020 Larkspur. Stock-flowered, Dwarf Candelabra-formed. Quite a new dwarf race of Larkspurs, the stems of which attain hardly one foot is height. Close to the ground the stems throw out beautifully-curved	n	1
branches, which diminish in length as they approach the top of the principal axe; thus giving to the whole plant the appearance of a Candelabr.  1021 Mignonette, Parson's white. Superior in odor, habit, and color, bein	.25	の
nearly pure white, and cannot fail to become a general favorite. The spikes are large and beautifully shaped. One plant suffices to perfume whole house. A great acquisition	e a10	-
1022 — New Crimson-flowered Giant. A new variety, quite distinct from all other sorts, being robust in habit, with very large spikes of hand	a -	0
some flowers of exquisite fragrance, and is a free and perpetual bloomer We consider this the best variety of Mignonette in cultivation.  1023 Marigold, Orange African Quilled. A very double variety of Marigold with quilled, patales, a striking povelty, and very shown.		
with quilled petals; a striking novelty, and very showy  1024 Nemophila Maculata albida. The individual flowers are larger than half-dollar; and the general effect of the white (as brilliant as frosted silver) contrasted with the bright purple blotch on each petal of the flowers which are produced in great quantities is of a character to insure it	7	
which are produced in great quantities, is of a character to insure it becoming one of the floral favorites of the season  1025 Oxalis Valdiviana. A very strong-growing, still compact, new Oxalis; th	25 е	
sweet-scented, bright-yellow flowers are well up out of the foliage.  1026 Pansy Cliveden (mixed colors). These invaluable early spring-flowerin bedding-plants are so universally known and admired that comment o	25	
them at our hands is quite unnecessary; suffice it to say, they are becoming more popular every year; and for effect, when grown in masses, oused as edgings for beds, they cannot be surpassed.	1-	
1027 — Odion, of fine blotched, very splendid beautiful large-eyed flowers.  1028 — Beauty of St. Osyth (Black). The darkest Pansy ever raised; equal to the second	50	
in size to Claribel, and as tree a grower and bloomer as the Chiveden  1029 — New Dark Violet Blue. The color of this flower is as stated in th  name, — dark violet blue; large blossom, of good substance, free bloome	25 e	
and, as a bedding-pansy, is a plant of great beauty.  1030 Petunia, new fringed varieties. Consisting of a great variety of color-beautifully and finely fringed	50	
1031 — Double, striped. From large-flowering striped Petunias, carefully fecundated with double varieties	50	
1032 Perilla Nankinensis fol. Variegatis. The foliage of this new variety the well-known and highly ornamental dark brown Perilla Nankinensis variegated, and striped with brilliant rosy carmine, and sometimes eve	is	
with white, producing a striking and charming effect.  1033 Phlox Drummondii Heynholdi. The New True Scarlet Phlox (Benary). There is already in our gardens a bright variety of much value.	25	
known under the name of P. scarlet (coccinea); but its flowers, though of a very brilliant color, are far from being the true scarlet, and only of	a a	
radiant, bright dark-crimson tint  1034 Salpiglossis Nigra, or New Black. A new variety, recommended for i decidedly distinct character as a black blossom	25	
1035 Statice spicata. This charming early-flowering annual continues in blood a long period. The plant forms a spreading tuft of lively emerald green from which arise a multitude of ear-like spikes of lovely rosy-pink flow	m n,	
ers. Beautiful dwarf beds or edgings can be made with it. For pot cu ture, it is very u-sful and pretty,—equally valuable for winter bouquet 1036 Sweet William, pure white (Dianthus barbatus albus). Pure whi	l s, .25	
blossom, large, and good substance.  1037 Wallflower, New Golden, Tom Thumb. A first-class novelty; hab compact; color fine golden orange; petals of good substance, and flowe	26 it	
large; calyx delicate green, instead of dark brown, as in other wallflowe	rs .25 h	
very large, double white flowers, produced during the whole summer 1039 — elegans, Double Orange. Another color reproduced true from seed	25	0
		4

## NEW AND RARE VARIETIES OF VEGETABLE SEEDS.

N.B. — While we exercise the greatest care to have all seeds pure, true to name, and reliable, we do not warrant the same to produce a crop. There are so many changes that take place during the season of growth to final maturity, that we do not hold ourselves liable or responsible in any respect for the loss or damage arising from the failure of any seed sold by us.

The following kinds we wish to call attention to as desirable:————————————————————————————————————	,
ASPARAGUS, Moore's Premium. This variety is now well known in Boston and vicinity as the largest and finest in every respect, without exception, in cultivation	0
BEET, Hatch's Early Extra Blood-Turnip. An improvement on the Blood-Turnip, being earlier and smoother	0
New Chilian (for decorative purposes). This striking novelty is specially adapted for bedding-purposes, the foliage presenting a variety of color, from bright orange to purplish-crimson	0
— Carter's Perfection. For flower-garden decoration, or for salad. The root is of medium size, rich color, and fine flavor. The foliage is shining black, of dwarf, even, and regular habit; and, unlike other beets, the leaves show their dark color from the seed-leaf	5
BEANS, New White-Seeded Dwarf Wax. A most excellent new variety, highly esteemed for its white, tender, succulent pods. The seeds are white, as well as the pods, adding much to its value, and giving it a decided preference over the black-seeded sorts. Very prolific, the vines being literally covered with pods.	0
Gray Zebra Skinless Runner. This may be considered the best skinless bean now in cultivation. Pods six inches long, green shaded with purple, thick and fleshy, without skin nor string. Seed gray, striped dark gray and black. Very vigorous plant, branching in character, and having an extreme profusion of pods; coming in after the bush varieties25	5
Dreer's Improved Lima. Of fine flavor. Earlier, and forming beans closer in the pod, than the old variety. 60 cts. per qt.,	0
BRUSSELL'S SPROUTS, Scrymger's Giant. The true variety. Dwarf-growing, close-headed, and compact	0
CABBAGE, Robinson's Champion Drumhead. The largest in cultivation. Have been exhibited in Europe weighing seventy-four lbs. (See cut.)10	0
— Carter's Heartwell Early Marrow. A distinct English variety considered by them to be indispensable as an early variety, and the very best for marketing purposes. The hearts are extremely firm, and averaging from four to six lbs. weight with scarcely any loose outside leaves, the flavor being particularly mild and melting. After a trial of the merits of seventy varieties, this is pronounced the very best early Cabbage in cultivation	5
CARROT, Carter's Giant Wiltshire White. The best and largest White	
Carrot in cultivation. The roots grow to an immense size, handsomely shaped and of very excellent feeding quality, and therefore a very fine field variety. The top of the carrot-roots grow sometimes to a length of six inches above the ground. A distinct variety	0
CAULIFLOWER, Veitch's Autumn Giant. This extremely valuable variety	
is perfectly distinct from any other sort. The heads are magnificent, beautifully white, large, firm, and compact, and, being thoroughly protected by the foliage, remain longer fit for use than any other sort	5

# AMATEUR CULTIVATOR'S GUIDE.

	2.
Per	per.
CELERY, Dwarf Large Ribbed. A white, self-blanching variety having but few side-shoots, the whole strength of vegetation being concentrated into	
the main plant. For vigorous growth of stalk, and large size of rib,	
this variety is the best. The plant being very upright in character, and	0.11
the stalks closely set, it will admit of very close cultivation	.25
— Saugdringham. A new and excellent variety, becoming rapidly popular.  Of medium size, very juicy, and excellent flavor	.10
CORN, Potter's Excelsior Sweet. This variety originated in the Rhode-Island	
Seed Gardens in East Providence, and can truly be said to be unequalled by any variety now in cultivation for sweetness and tenderness. Medium	
in size, equal to any in earliness, a better corn for family use cannot be desired	.10
- Mexican. A black, very sweet, variety	.10
- Minnesota Early. A new, rather dwarf, very sweet variety	.10
Triumph Sweet. A new sort. The earliest of the large kinds. Unsurpassed for sweetness and delicacy of flavor, white appearance when cooked,	10
and productiveness. A very fine market sort	.10
CUCUMBER, Marquis of Lorne. This splendid Cucumber still maintains its position as the best show variety. It has a white spine, beautiful short	
neck, smooth skin, very straight and prolific, with a remarkable absence	
of seed, and is unquestionably of most delicious flavor. It has been	
awarded first prizes at nearly all the great horticultural shows. (See	05
cut, p. 88.)	.25
- Sooly Qua. This remarkable vegetable, which created such a sensation when	
shown at the Royal Horticultural Society's Meeting, June 8, 1870, is wonderful alike for its immense fruit, large, dark-green, glossy leaves,	
and the beauty of its flowers. In China it is used by the natives as a	
regular article of food, boiled with rice, and is much enjoyed, served up	
in various ways, by Europeans. The fruit is of rapid growth, attaining a length of six feet, and twelve to sixteen inches in circumference; and	
is used in a green state just when it attains its full size. (See cut,	
p. 88.)	.25
- Tailby's Hybrid. This new Cucumber is a perfectly successful cross between	
the Long Green and White Spine. It grows to a large size, and is well	
worthy the attention of amateurs and the market-gardener	.15
— The Green Prolific. A superior variety, the result of a long-continued, careful selection from a natural cross between the Green Cluster and	
Long Green, crossed again with the White Spine; the best kind of a	
pickle thus being secured. With good care, an acre will produce two	
hundred thousand and more pickles. Its growth is remarkably uniform,	
and on account of its fine flavor, and crisp and tender flesh, is equally desirable for a market sort.	.10
Tender and True. This splendid new Cucumber is a seedling from the Tele-	
graph and Blue Gown, combining the good qualities of both these fine	
kinds. The color is beautiful deep green, of very finest flavor, straight in shape, and grows from twenty-four to thirty inches in length, strong	
bearing, and suitable for either summer or winter use. It was awarded	
a first-class certificate by the Royal Horticultural Society, and gained	
first honors at Birmingham, England, on the 7th of July, 1874, in competition with twenty-one other kinds	.50
Very Long Green China. After very careful growing, this new kind is pro-	.00
duced as one of the earliest and most prolific varieties. Surface smooth;	
solid white flesh; and of excellent flavor	.15
- Gen. Grant. Having ourselves grown and used this Cucumber, we can confi-	
dently recommend it as unsurpassed for table use. It is of splendid flavor, hardy, and very productive. Best ready for use when from twelve	
to twenty inches long	.25
KALE, Acme. A very dwarf curled Kale, with glaucous-green leaves intersected	
by a scarlet midrib. Very hardy, very early, prolific, tender, mild, and	
a brilliant green when boiled	.10
117	

# ©VRTIS, ©OBB & ₩ASHBURN'S

~	Per	pkt	3.5
8	LETTUCE, Bunney's Incomparable Hardy Green Cos. A large, compact- growing variety, crisp, and of fine flavor. Unequalled in standing dry seasons	.10	
	Hanson. A fine, solid, crisp, tender, large-headed variety, with beautiful green outside leaves. White hearted, and of delicate flavor	.10	
2	MELON, Boston Market. (Musk.) Our stock was grown expressly for us by Walter Russell of Arlington, whose melons have brought the highest price in the market for some years. Shape nearly round, flattened at the ends. Deeply and regularly ribbed. Medium size. Skin green and thickly netted. When fully ripe, of a yellowish shade. A fine variety for family or market purposes.	.10	
	Persian. (WATER.) Introduced by Bayard Taylor, Esq., the traveller. It is globular and elliptical in form, of pale-green color, with dark stripes. Flesh crimson, and of remarkably fine texture; delicious flavor, with only half an inch of rind. A peculiarity of this melon is, that it can be taken off the vine to ripen, and will keep till winter. It grows to a large size.	.25	
No.	Sill's New Hybrid. (Musk.) This fine variety has all the earliness and sweetness of the White Japan, and is larger than the Christiana. It is very vigorous and productive in its habits of growth, and the melons are spicy and delicious. Flesh fine salmon-color	.10	
	ONION, New Giant Rocca of Naples. A splendid variety, of delicate flavor, globular shape, and light brown skin. Grows to an immense size. Weight, as exhibited at the Royal Horticultural Show in London, three pounds, nine ounces. Per lb., \$3.50; oz., 30 cts.	.10	
	- Early White Naples. A distinct variety of large size, quick growth, and mild flavor. Per lb., \$4.00; oz., 40 cts.	.10	
	— Large Italian Red Tripoli. Grows to a large size, but of exceedingly mild flavor. Bulbs of this variety have been exhibited weighing two pounds eleven ounces. Per lb., \$2.00; oz., 1.25.	.10	
	— Giant White Tripoli. Specimens of this magnificent Onion were on view at the Royal Agricultural Society's Show at Oxford. Four of the heaviest roots turned the scale at nine pounds, three ounces. Per lb., \$3.50; oz., 30 cts.	.10	
	— Neapolitan "Marzagole." This variety is said to be the earliest Onion in cultivation. In mild sections of the country, seed sown in autumn produces good-sized bulbs in March. Per lb., \$3.50; oz., 30 cts	.10	
	—New Queen. Silver-skinned variety, of wonderfully rapid growth and remarkable keeping qualities. If sown in July, it will be ready to pull the same year, and be sound and fit for use the following fall. It is of excellent mild flavor, and can be highly recommended. Per oz., 40 cts.	.10	
	POTATOES, Brownell's Centennial. (New, 1877.) This new seedling potato was originated by E. S. Brownell, the originator of that well-known and favorite variety, Brownell's Beauty. It was produced in 1874, and is a cross between Brownell's Beauty and the White Peachblow. The vines are stout and vigorous; foliage dark green. The tubers are compactly clustered around the base of the stalks, consequently easy to dig; are of a good medium and uniform size; shape nearly round, somewhat flattened, very symmetrical, remarkably uniform and handsome, never rough or spongy; eyes few and quite small; stem set in a shallow, round basin; skin of a deep red color, smooth, and uniform in coloring. Season, second early or medium. Its flesh is of exceedingly fine grain, white, and, when boiled or baked, of a lightness and porosity seldom equalled; cook through evenly, without any hard or watery core.  During the past two seasons it has proved to be one of the most productive varieties; its tubers were perfect in every respect, never hollow; and their excellent and delicate flavor places them in the first ranks of our best table potatoes. 1 lb. 60 cts. 8 lbs. \$1.50, by mail, prepaid.		
3	118		

# AMATEUR QULTIVATOR'S QUIDE,

	n	1.4	1
POTATOES, Superior. (New, 1877.) The parentage of this variety is the set that of the "Centennial." It was produced in 1873, from a seed-Brownell's Beauty fertilized with Peachblow. The yield of this new ling potato is enormous: six hundred and seventy-three pounds grown from one pound of seed during a season of unprecedented drewhen many older varieties did not yield enough to pay for the diggir tubers are medium to large, elongated, oval, or cylindrical, of a pedark copper color, and very uniform and handsome in appearance. very fine and smooth, eyes few and small. The vines are strong healthy, and the growth of the roots and tubers close around the It ripens second early, or medium late; keeps well during winter retains its mealiness and excellent table qualities through the entires on. A certificate of merit was awarded to this variety at the International Potato Exhibition at London last September. 1 lb. 8 lbs., \$1.50, by mail, postpaid.	me as ball of seed-were bught, g. Its culiar Skin g and stalks. r, and e sea-great		7
— Alpha. The very earliest variety for farm or garden culture, also for founder glass, fit for table ten or fifteen days before the Early Rose. of medium size, oblong, somewhat flattened, with eyes but sl depressed; flesh very white, fine ground, dry, and firm. We recomthis as the best early variety in cultivation. 1 lb. 60 cts.; 3 lbs., by mail, postpaid.	Tuber ightly mend		
— Snowflake. One of the earliest varieties. The tubers are of a good mesize; skin white with a russety tinge; flesh exceedingly fine gresnow-white when boiled, and of a lightness and porosity almost apping a snowflake. It has good keeping qualities, samples the first of not showing the least deterioration; suited to any kind of soil, and ducing from three hundred to four hundred bushels per acre. 60 cts.; 3 lbs., \$1.25, by mail, postpaid.	oach- June I pro-		
— Ruby. A new red kidney-shaped potato; flesh white, fine grained, firm, a exceedingly fine flavor, being equally productive as the Early Rose those who prefer a red-skinned potato we can confidently recombine as a very superior variety. 1 lb. 60 cts.; 3 lbs., \$1.25. by postpaid.	. To mend		
[Peas ordered by mail are subject to an extra charge of 25 cen quart for postage.]  PEA, Sutton's Emerald Gem. This new variety is robust in habit, quit tinct from all others, and one of the best in cultivation. It has a green foliage, and is early and productive. The peas retain their color when cooked much better than most early sorts.	e dis-	.15	
— Carter's Extra Early Premium Gem. A great improvement on Mcl Little Gem, growing to a height of eighteen inches. The pods are long, of a dark-green color, with a peculiar gloss, containing from se- eight fine peas. It is a very prolific dwarf pea, and considered to Directors of the State School of Horticulture in Belgium to be the est grown	very ven to by the	.15	
— Carter's Commander-in-Chief. This is now recognized in England a grandest pea for exhibition and general table-purposes in cultivation is a green wrinkled marrow of exquisite flavor, large, slightly copods, often containing ten large peas. This in English exhibition gained the unarimous reputation of being the best pea in the agrows four feet high.	n. It urved is has	.25	
- McLean's Blue Peter. Earlier than Daniel O'Rourke; twice as proli	fic as	.15	
Laxton's Alpha. A very early wrinkled variety, of fine flavor, and a lift bearer.		.10	
Laxton's No. 1. Considered to be earlier and more hardy than Lax Alpha, with straight pods		.15	
Laxton's Fillebasket. A large, very handsome, and prolific pea, exceed productive .		.25

	PEA, Multum in Parvo. This pea closely resembles the Little Gem; grows 18 inches high, and bears large pods	.15	d'est
	Edible Podded Wrinkled. A novelty of great merit. The pods should be cooked whole after having the back strings taken off. A delicious addi- tion to the dinner-table. Per qt50	.10	9
	Easte's Kentish Invicta. A handsome blue pea, with straight, well-filled pods. Earlier than Daniel O'Rourke, and of finer flavor than any white pea	.10	1
	Popular. A decided improvement on Champion of England, being somewhat earlier, and having better-filled pods.	.15	il il
	—— Superlative. The largest and finest-podded variety ever raised. As it sometimes runs seven or eight feet in height, it should be slightly pinched in when about five feet high	.15	1
	PARSLEY, Champion Moss Curled. This parsley is the perfection of a curled parsley for garnishing purposes. We cannot recommend it too highly: it is not to be surpassed	.10	
,	— New Fern-Leaved. Most exquisite in form and color, invaluable as a garnishing plant, and admirably suited for mixing with dwarf ornamental foliage plants in the flower-garden, and also for table decoration.	.25	
	PARSNIP, Carter's New Maltese. A most excellent variety, the base of the leaf-stems presenting the appearance of a Maltese cross. This variety shows a marked improvement in texture and quality upon the sorts at present in cultivation	.10	
	RHUBARB, Johnson's St. Martin. This variety has fully established a reputation for earliness, productiveness, and good flavor, so indispensable to forcing, and for all purposes is considered superior to the Victoria, or any other variety now in cultivation.	.25	
	SQUASH, Butman. A new variety, distinct in color, being a bright grass-green, intermixed with white, in size and productiveness resembling the Hubbard, and recommended as an improvement in flavor, and texture of flesh	.10	
	— Moore's Vegetable Cream. The finest summer squash cultivated. When mature, it is of a uniform pale-yellow color. The skin, or shell, is very hard when perfectly ripened; flesh white, tender, and succulent, even till the seeds are ripe. It may be used in every stage of its growth; and, when perfectly ripened, will keep through the winter if stored in a dry place.	.10	
	TOMATO, Green Gage. A new kind offered by Carter & Co. of England. Handsome in appearance; of yellow, tinged with green color, having a distinct piquant flavor, and resembling a yellow plum in appearance. Equally desirable for the table or preserving	.15	
	"The Golden Trophy," This beautiful yellow tomato is a sport from the well-known "Trophy," but is a stronger and more rapid grower, much more productive, and ripens a week earlier. The flavor has very little acidity, and, when eaten raw, resembles in flavor some varieties of		
	apples	.10	
	The Conqueror. Mr. Pringle of Vermont, the well-known hybridizer, having given his attention some years ago to the improvement of the tomato, succeeded in raising the Conqueror, which, without doubt, is the earliest and most productive variety in cultivation. The fruit does not remain green for a long time after attaining its full size, but ripens at once. The fruit is borne in clusters of eight to twelve, which ripen nearly at the same time: it is from three to four inches in diameter, and unusually free from irregular specimens. Its color is deep red, dusted with gold;		
	flesh solid, and of rich, mild flavor	.10

### GLADIOLUS.

#### SPLENDID FRENCH AND BELGIAN HYBRIDS OF GANDAVENSIS.

FORWARDED BY MAIL TO ANY ADDRESS, POST-PAID, AT CATALOGUE PRICES.

THE new hybrid productions of the Gladiolus Gandavensis are, without doubt, the most superb flowering-bulbs in cultivation, producing their magnificent, long, and densely-flowered spikes of bloom, varying from white to rich salmon, and brilliant carmine, to the most intense scarlet or crimson. A single bulb will often give two or three stems of bloom; and a succession of flowers will be produced for two months.

General Treatment. - The bulbs should be planted as soon as the ground is fairly dried General Treatment.—The bulbs should be planted as soon as the ground is fairly dried in the spring, and all danger of frost is over; planting may be made every two weeks, until the middle of June, to secure a succession of bloom. Plant the bulbs from two to four inches deep, according to their size. The soil should be enriched with well-decomposed manure, and well pulverized. The plants should be well staked, and the bloom will be magnificent. When the frost has killed the leaves, or before, if the leaves, by turning yellow, show the ripening of the bulb, the bulb should be taken up, dried rapidly in full sunlight, and the new bulbs separated from the old. Should be kept during the winter in a dry, cool cellar, free from frost.

A discount of five per cent from catalogue prices will be made when one dozen varieties are ordered, ten per cent on two dozen varieties, and fifteen per cent on fifty varieties. Purchasers will please state whether we may substitute, in the event of our being out of the varieties ordered.

#### AMARYLLIS, HYBRIDS OF VITTATA VARIETIES.

A very choice lot of seedling varieties, without names, grown by one of our best cultivators of this showy species of flowers, are offered at \$1.00 each.

Named varieties, white and red grounds, striped and flaked, very beautiful, \$2.00 to \$3.00 each.

#### TIGRIDIAS.

A genus of Mexican bulbs; grows about one foot and a half high, producing flowers of the most exquisite beauty; the flowers large, about four inches across, of singularly curious shape, and the color of each variety gorgeous, and purely contrasted. No flower can exceed it in beauty. In bloom from July to the first of October. In autumn take up the bulbs, and keep them in a dry place, away from frost, until the time of planting in the spring. Tigridias by mail,

postpaid. Conchiflora. — Orange and golden-yellow, spotted with black. 15 cents each; \$1.25 per dozen.

Payonia. — Richest scarlet, tinged and spotted with yellow. 15 cents each; \$1.25 per dozen.

#### DOUBLE TUBEROSE. (Polianthes Tuberosa.)

(Pollanthes Tuberosa.)

The tubers of this delightfully fragrant flower may be planted from January until March. Where a succession is required, and can be accommodated with a warm greenhouse or conservatory temperature, planting may begin with the former period; but where convenience is limited to a hot-bed and greenhouse, the latter period is suited. In planting, remove the useless small offsets around the main root, place a single tuber in a pot six inches wide, or a group of two or three in a proportionately larger one. Use good rich-bodied loam. Start the growth slowly upon a temperate heat in a hot-bed, forcing-pit, or frame; increase the surface or bottom heat after the inciplent roots are made, as in Hyacinths, keeping the tuber in a good warmth, and the upper growth relatively cool. As the sten becomes vigorous, gradually dispense with the root warmth, and only encourage the flower-stem in a well-ventilated, warm greenhouse in spring, or conservatory in summer. As the growth approaches to maturity, they may be gradually exposed and plunged into the open air during hot summer months, for a short period, and returned to [the conservatory for bloom, as required. They will also succeed well planted in the open ground in May. May.

Flowering bulbs, 8 cents each; 75 cents per dozen; \$4.00 per 100. Large bulbs, 10 cents; \$1.00 per dozen; \$5.00 per 100. Extra large bulbs, 15 cents each; \$1.50 per dozen; \$8.00 per 100. Plants of the above started in pots, 20 cents each; \$2.00 per dozen.

#### NEW DOUBLE TUBEROSE.

#### "The Pearl."

This is a new and entirely distinct form of the old double tuberose. Its chief characteristics are, its short robust stem, and great size of flowers, the latter being as freely produced as in the common sort, while they are quite double the size; and we find that young roots of this variety flower much sooner than the old sort, inasmuch as small sets which we purchased last spring, and planted in the ordinary way, have thrown up their stout flower-stems, and have given us

flowers of greater size and much purer white than we ever saw in the old variety.

Flowering butbs, 10 cents each; \$1.00 per dozen; \$5.00 per 100. Extra fine flowering butbs, 15 cents each; \$1.50 per dozen; \$5.00 per 100. Plants started in pots, \$2.50 per dozen.

## NEW AND RARE PLANTS FOR 1878.

#### Euphorbia Corollata.

A new plant of rare merit. We take pleasure in offering this plant for the first time, of recent introduction. Few plants possess equal merit to the amateur or florist as a border plant, or for cut flowers. The growth is from two to three feet high; very branching, and is completely covered with delicate white flowers from June till November. The plant is herbaceous, and perfectly hardy. Price, 50 cents each; \$4.00 per dozen; sent by mail, postpaid, on receipt.

#### NEW DOUBLE WHITE VIOLET. Belle de Chatenay.

The Most Desirable Novelty of the Season. A new and magnificent variety of this charming plant is now offered for the first time in this country.

The flowers are pure white, with the border slightly tinged with purplish Illac, most delicately perfumed; very large size, frequently measuring one and one-fourth inches in diameter, as double as a camellia. It will prove a most valuable addition to the list of white flowers, now in such demand for bridal and other decoration. With but little trouble, one may have violets from January until May. They also bloom freely in the open ground. Plants obtained by setting out runners in spring, in rich soil, and giving all the water they need in dry weather, may be set in early autumn in a common cold-frame. Allow them to grow until winter comes, then fill up with leaves, put on the sash, and a shutter over that. When flowers are wanted, remove the sash, and take off the leaves; and if the plants were strong, and well furnished with buds, they will begin to bloom in a week or two. Price, 50 cents each; \$4.50 per dozen.

#### BEGONIA GLAUCOPHYLLA SCANDENS.

A drooping or creeping species, with large panicles of orange-salmon flowers; grown in hanging baskets, it is one of the most beautiful plants in cultivation. Price, 50 to 75 cents each; \$4.50 per dozen.

### NEW GERMAN IVY.

(Senecio Macroglossis.)

A new variety of this popular plant, which will become more valued than the old variety when better known. It resembles the English Ivy to such a degree that it is often mistaken for it; the leaves have a metallic lustre, the veins and ribs being of a lighter color. The growth is strong and vigorous, and for baskets and other similar decorations it is unsurpassed. A good plant, 25 cents. Per dozen, \$1.50 to \$2.50.

#### AMPOLOPSIS VEITCHIL

This new and beautiful species of Woodbine, from Japan, has proved entirely hardy. It grows as rapidly as the old Virginia Creeper, or Woodbine, and attaches itself to any wall or building where ornamental vines are desirable. The leaves are small, and at first of an olive-green, changing to bright scarlet in the autumn. It is one of the finest of our hardy climbers. Price, from 25 to 50 cents each; \$2 to \$4 per dozen.

#### EULALIA JAPONICA VARIEGATA.

A new, distinct, and very beautiful, ornamental Japan grass, of easy culture, and is said to be quite hardy. The leaves are long and narrow, striped white and green. The flower-stem is from four to six feet high, and is terminated with a cluster of flowers, the flowers being arranged on separate stems, but forming a large head or panicle of blossoms, which, from their silky texture, have a beautiful feathery appearance, and when cut and used for vase decorations retain their beauty unsurpassed for a long period. Price, 25 to 50 cents each.

#### JAPANESE PERSIMMON.

The choicest and most popular fruit of Japan. Suitable for culture in the Southern States. One-year-old grafted trees, \$1.00; two-year-old trees, \$2.00.

#### JAPANESE MAPLES.

These Maples are among the most charming of the introductions from Japan. They are of dwarf habit, rarely growing over fifteen or twenty feet high, and have proved perfectly hardy during ten of our severe winters. We offer twelve distinct varieties; some with highly-colored leaves, from a pure white variegation to pink and dark purple; and others with leaves as deeply cut as lace. A mass of them on a lawn is a thing to be remembered, the color of the leaves being constant under the hottest sun. The whole class is destined to a popularity unequalled by any other hardy trees or shrubs. The plants are in pots, from one and a half feet to two and a half feet high. Prices, from \$2.00 to \$6.00 each.

#### ROCK OR SUGAR MAPLE.

We now offer some fine standards of this beautiful and ornamental Shade-Tree; remarkably well grown, from frequent transplanting. Specimen trees will be at the store for examination, during the proper season for transplanting. Price from \$1,50 to \$4.00 each.

GUIDE.

A new, hardy grape, combining the following desirable qualities; viz., hardiness, size, beauty, quality, productiveness, and carliness, maturing ten days earlier than the Hartford Prolific, and

twenty days before the Concord.

This grape is one of 2,500 seedlings, and produced its first fruit in the year 1872; it was then exhibited, and has been shown at the exhibitions of the Massachusetts Horticultural Society, and

exhibited, and has been shown at the exhibitions of the Massachusetts Horticultural Society, and tested by the Fruit Committee, every year since, and prizes have been awarded for it as follows:—Aug. 25, 1877, first-class certificate of merit; Sept. 1, 1st prize for early grapes; Sept. 8, 1st prize for early grapes; Annual Exhibition, Sept. 18, 1st prize for any variety not named in the schedule. It has also received first prendums from various other societies, and has always taken the first prizes over all other varieties shown in competition; the last being the prize of \$60 for the best new seedling, after a satisfactory trial, awarded in December, 1877, to John B. Moore, for the new seedling, Moore's Early, by the Massachusetts Horticultural Society.

Description of the fruit: bunch large, berry round, large (as large as the Wilder or Rogers No. 4), color black, with a heavy blue bloom; quality better than the Concord; vine exceedingly hardy; has never been covered in the winter, and has been exposed to a temperature of more than twenty degrees below zero without injury, and it has been entirely exempt from mildew or disease. Its earliness makes it desirable for an early crop, and more particularly adapts it to New England and the northern portion of the United States.

Extract from the Report of the Fruit Committee of Massachusetts Horticultural Society for the

Extract from the Report of the Fruit Committee of Massachusetts Horticultural Society for the

year 1877, Hervey Davis, chairman: —
"Sept. 4, Mr. Moore extended an invitation to the Fruit Committee and other gentlemen to "Sept. 4, Mr. Moore extended an invitation to the Fruit Committee and other gentlemen to visit his place, in order to examine his seedling grape, Moore's Early, and to compare it with the Concord and Hartford, growing side by side in the same vineyard, with the same soil and cultivation. We found the Moore's Early fully ripe, and bearing a very full crop on all the vines, comprising several hundred. To all appearance they had not received any extra care or cultivation. The soil was a light sandy loam. The Concords and Hartfords were neither of them ripe, and to all appearance would not be for two or three weeks."

PRICE, I year old vines, \$2; 2 years old, \$3 each, 1 year old vines, \$20 per dozen; 2 years old, \$30 per dozen. A few extra vines, \$5 each, delivered to express. Special rates to the trade in large quantities. One year old vines by mail, 15 cents additional. There will be no charge for packing, which will be well done. N.B.—We have no wood for sale.

The stock is limited, and orders will be filled in rotation. Payment by check on Boston, or post-office money order. Send full name, with town and state, written plainly.

#### MOORE'S NEW PRIZE SEEDLING STRAWBERRIES. - Description.

STRAWBERRIES. - Caroline. - Large, roundish, irregular; the largest specimens cockscombed, but not wrinkled; seeds slightly sunken; color, crimson, polished; flesh scarlet next the outside, paler at the centre, a little open at the heart; flavor rich and sprightly; foliage large and robust,

footstalks long and stout, very productive; season, medium.

Belle. - Very large, some of the first berries, cockscomb shape; color, dark brilliant red, polished; of fine flavor; foliage, strong and vigorous; fruit-stem very strong, productive, and very handsome; season, late.

General Sherman. — Large, conical, very regular in shape; color, bright, brilliant searlet; one

of the handsomest strawberries grown; quality, good; productive; season, early.

**Mervey Davis.** Large, generally conical; color, deep, brilliant scarlet, and very handsome; flesh, white, tinged with red next the outside, flesh firm; quality, best; foliage, strong, robust, productive; season, early.

The above-named new strawberries have been selected from many thousands of seedlings

The above-named new strawberries have been selected from many thousands of seedlings. They are vigorous growers, and hardy; color, a brilliant, polished crimson, flesh, firm enough for distant transportation; quality very fine, equal to any other varieties, and very productive. Extract from the report of Hervey Davis, Esq., chairman of the Fruit Committee of the Massachusetts Horticultural Society for the year 1877:—

"The season has been very favorable for the strawberry, and the exhibition of this fruit has been fully up to the average of the past few seasons. Those most worthy of note were the General Sherman, Hervey Davis, and Belle, shown by John B. Moore, and the Belle and Colonel Chency, shown by George Hill. At the Rose Show, June 20, the first prize for the best four quarts of any variety was awarded to the Hervey Davis, and the second to the General Sherman. At the Strawberry Show, June 27, the first prize for the best four quarts of any variety was awarded to the Belle. The General Sherman is an early fruit, very large and handsome; quality, good. The Hervey Davis is also a very large fruit; quality very good to best. It is very hardy and prolific, and is also an early variety. The Belle is the largest of any of Mr. Moore's seedlings, and we think it is the largest strawberry ever exhibited on our tables.

The stock of some of the new strawberries is limited, and orders will be filled in rotation.

It will facilitate the dispatch of business, if with each order the NAME and ADDRESS are written distinctly, and in full. Except in cases of urgency, orders are executed in rotation as received. C., C. & W. therefore respectfully invite their patrons to anticipate the "Planting Time," by sending their orders early. Where Post Office Money Orders or Drafts are sent, it may be at our risk. We warrant seeds to reach the customers.

add of Sub-

VANISHED ...

#### VALLOTA.

A spleudid bulbous-rooted plant, allied to the Amaryllis. It blooms in August, throwing up its strong stems about one foot high, with from five to eight brilliant, scarlet, lily-like flowers; very ornamental for bedding out in summer, or cultivation in pots and vases.

Purparea, each 50 to 75 cts.

#### AMARYLLIS FORMOSISSIMA, OR JACOBEAN LILY.

This is a beautiful summer-flowering bulb. It generally produces two stems, one after the other, each bearing a large lily-like flower of the richest crimson-velvet color; its golden stamens drooping gracefully over the lower petals, giving it additional brilliancy. Plant the bulbs early in May, in rich mellow soil. In autumn, take them up, and keep dry and secure from frost. They bloom in June. Price, 35 cents each; \$3.50 per dozen.

#### TROPÆOLUM TRICOLORUM.

Pot in rich, free loam, leaf-mould, and sand, in autumn, and allow them to make way all through the winter in an airy greenhouse; the stems being trained up light trellises of some kind. After the blooming season, the bulbs should be allowed a rest of a few months. Each, \$1.00.

#### SMILAX (MYRSIPHYLLUM ASPARAGOIDES).

A beautiful winter climbing-plant, adapted alike to the greenhouse and conservatory. Nothing can excel this plant in beauty of foliage and orange fragrance of the flowers. is extensively used for bouquets and floral decorations of every description.

Medium-size Bulbs, 25 cents each. Large-size Bulbs, 50 cents each.

\$1.00 each. Seed per packet, 25 cents.

NOTE. — This plant is grown and used most extensively as a decorative vine by every florist in the vicinity of Boston. No lady, dressed for a party, feels her toilet complete (if natural flowers are worn) without a spray of Smilax appended to her hair.

#### JAPAN LILIES.

Our collection of Lilies comprises all the most beautiful kinds, including ten of our own seedlings, which are unsurpassed by any yet produced. A full description will be found in our Bulb Catalogue. The following are the principal varieties of the Japan;—

Lilium Album.	Pure white. Each			 	.40 to 8	.75
Rubrum	. White, with deep	crimson spots	3 .	 	.40 to	.75
Roseum.	White, with rose-	colored spots	+ .		.40 to	.75
Auratum,					00.4	* **
Species.	Very much admire	1		 	.30 to	1.00

#### MADEIRA VINE.

A beautiful summer climble g-plant, of rapid growth, completely covered with long, graceful racemes of deliciously-fragrant white flowers. Each 15 cents to 25 cents.

#### MUSHROOM SPAWN.

DIRECTIONS FOR GROWING MUSHROOMS. The only conditions required for the healthy growth of Mushrooms are a mass of short dung, heated to from fifty-five to sixty degrees,

growth of Mushrooms are a mass of short dung, heated to from fifty-five to sixty degrees, and lumps of Spawn about the size of walnuts, six inches apart, just beneath the surface; the whole covered with an inch thickness of good light friable earth, and three or four inches of straw, or litter of any kind, to keep in the very moderate warmth. This can be managed in any dark cupbourd or celler; and the size of the bed is immaterial.

Take of horse-droppings from the stable, without the straw, as much as will make the bed the size you want it, a foot thick; put this anywhere out of the weather, away from the light and draught. Let this be pressed, but not hard; and in a few days, when it is nice and warm on thrusting the hand in, get the Spawn, and break the cakes in small pieces and put them in all over the dung, even with the surface; upon this being patted down smooth, but not hard, it will require from half an inch to am inch of earth all over it. Pat it downs to keen it in its place, and put some loose hay or straw over it. When it approaches dryto keep it in its place, and put some loose hay or straw over it. When it approaches dayness, it must be sprinkled with water with the chill off, enough to wet the earth, but not the dung. Sooner or later, according to the attention paid to these several points, you will have

Mushrooms, and plenty of them.

Best Mill-track Mushroom Spawn, per pound, 15 cents; 15 cents per pound extra by mailf pounds for \$1.00, by Express.
